Controlled Application Review and Resolution Program (CARRP)

Identifying and Documenting NS Concerns

National Security and Public Safety Division

Updated December 2017
Handling Official Use Only (FOUO) Material

Sensitive But Unclassified (SBU) materials and information are to be controlled, handled, transmitted, distributed, and disposed of in accordance with U.S. DHS policy, and is not to be released to the public or other personnel who do not have a valid "need-to-know" reason without prior approval from the originator. SBU material may be designated "For Official Use Only (FOUO). It is important to note that the FOUO designation is NOT a security classification, but DHS requires that FOUO material must be safeguarded against unauthorized access.

- FOUO material should not be left unattended on desks.
- FOUO material should be placed out of sight when not in use, unless it is in a room that has physical access control measures, as required by DHS MD 11042.1, section 1. 1. (Jan. 6, 2005).
- Unauthorized personnel should not be allowed in the area when FOUO material is being reviewed.

*Reminder: This course material is FOUO
Disclaimer

This Presentation is intended solely to provide training and guidance to USCIS personnel in performing their duties relative to the adjudication of immigration benefits. It is not intended to, does not, and may not be relied upon to create or confer any right(s) or benefit(s), substantive or procedural, enforceable at law by any individual or other party in benefit applications before USCIS, in removal proceedings, in litigation with the United States, or in any other form or manner.

This Presentation does not have the force of law, or of a DHS directive.
Dissemination

- This presentation may not be reproduced or further disseminated without the express written consent of FDNS Training.
- Please contact the National Security Division, HQ FDNS for additional information.
About this Presentation

- Author: HQ FDNS National Security and Public Safety Division
- Date of last revision: December 2017
- This presentation contains no sensitive Personally Identifiable Information (PII).
- Any references in documents or text, with the exception of case law, relate to fictitious individuals.
Stage 1: Identifying NS Concerns

- Use all available evidence to identify a potential NS concern.
- Differentiate between indicators and articulable link as the connection between an individual and an NS ground.
- Distinguish between KSTs and non-KSTs.
- Identify sources of information for KST and non-KST determinations.
- Understand the watchlisting process.
Identifying NS Concerns

Three elements to Stage I:

- Initial identification of a potential concern
  
  What facts are present?

- Evaluation of the potential NS concern
  
  Do those facts meet the definition for an NS concern?
  
  What type of concern is it?
  
  How strongly is the individual connected to the INA NS ground?

- Documentation of the NS concern
  
  Is there an existing CME or does a new one need to be created?
  
  What documentation elements are required based on concern type

The first stage of CARRP is identifying a NS concern.
But there are multiple parts to this one stage:
There’s the initial identification of a potential concern, generally by the adjudicator or through screening
There’s the part where we decide that yes, those facts we identified as concerning really do add up to an NS concern
And there’s the part where we document
It’s all within this first step
Who do you think does all of these things?
The initial identification could be anyone in USCIS, but is often going to be adjudications personnel reviewing the file or conducting the interview, or whatever officers are assigned to review results from automated screening
The evaluation will generally come from FDNS; although it can be anyone who is CARRP trained – the CARRP trained and designated thing is key at this point, because this step can serve as the sanity check – is the thing we’re looking at really a concern?
The documentation portion can be anyone who is CARRP trained, but will often be from FDNS
We’ll see more specifics on these roles as we move through this module
We saw in the Overview module that there were two types of NS concerns – KST and non-KST. So when we get to the evaluation of our concern type, that's one decision we'll be making. But in the meantime, what about the initial identification? How do we initially identify KST or non-KST concerns? Where do they come from?
Identifying KST NS Concerns

What is a KST?

- Known or Suspected Terrorist (KST).

- Has been nominated and accepted for placement in the Terrorist Screening Database (TSDB) with a KST category code, and...

- Remains on the Terrorist Watch List until a nomination for removal has been approved.

Nominations are made by law enforcement, intelligence, and homeland security entities.
Identifying KST NS Concerns

Where do KSTs (and certain non-KSTs) come from?

Nominations to include a subject in the Terrorist Identities Datamart Environment (TIDE) are made by agencies holding derog.

The National Counterterrorism Center (NCTC) evaluates the nominations and enters them in TIDE.

Individuals whose nomination included placement on the watchlist are pushed to the Terrorist Screening Center (TSC).

The TSC reviews and accepts the watchlist nominations into the Terrorist Screening Database (TSDB).

TSDB pushes records to TECS with the code to indicate that the record came from the TSC.

Unclassified // FOUO / Law Enforcement Sensitive

There are records that stay only in TIDE and do not get pushed downstream.
These records are generally lacking either derogatory or biographic information. They tend to be ambiguous such that they don't have a lot of utility in adjudication.

TIDE exports watchlist records to TSDB.

TSDB contains the USG Terrorism Watchlist.
Determinations to put someone on the watchlist follow a similar weighing of the evidence that we use to determine the connection between a person and an activity.
Require factual evidence – “articulable intelligence”
Give equal credence to past, present, and future actions and associations.
Basically, if there is a reasonable suspicion that a subject did any of the things listed, they'll be nominated as a KST.
And then information that came in to TSDB from TIDE subsequently flow downstream again into TECS.
In the same way that nominations flow downhill (you're nominated in TIDE, it pushes to TSDB, and that pushes to TECS).
- If your nominations is removed, the information should be pushed in the same way (TIDE - TSDB - TECS).
Which means... the that you're seeing would be removed.

For instructor background: 2015 Watchlisting Guidance is uploaded to the FOBTC “References” folder – password for the document is.
Handout:

TIDE Category Codes
Identifying KST NS Concerns

How is someone nominated to the watchlist?

- Nominations to the watchlist are made by law enforcement, intelligence, and homeland security agencies.
- There are two categories of watchlist nominations:
  - KST
  - Watchlist exception
- Nomination as a KST requires a reasonable suspicion that the subject is:
  - Known or suspected of being engaged in terrorist activity;
  - Known or suspected of having previously engaged in terrorist activity;
  - Known or suspected of being a member of a terrorist organization;
  - Known or suspected of having been a member of a terrorist organization;
  - Known or suspected of preparing to engage in terrorist activity.

Instructors: Emphasize that there are two types of people in the TSDB – those on the watchlist and those who are watchlist exceptions

KST watchlist nominations require sufficient biographic info AND reasonable suspicion – these are the ones that were named in the funnel chart on the last slide

The watchlist exception category are people who are exported to TSDB for screening purposes, but are not actually on the watchlist

Both categories of watchlist nominations result in [LE] records in TECS

- If the derogatory information doesn't rise to the reasonable suspicion standard, other category codes (including exceptions) exist
Identifying KST NS Concerns

How does USCIS identify KSTs?

- TECS records:
  - With a TECS record ID
    - LE
  - LE means that the record came from the TSC.
  - Other than LE watchlist exceptions.

- NCIC records:
  - Contains a LE number.
  - Indicates subject is a possible terrorist organization member or international extremist.
  - Does not reflect a record in the LE

All LE should have a corresponding LE.
But... you may encounter have a LE without a LE and vice versa.
A LE without a LE is still LE - call the TSC!
A LE without a LE is probably not a KST

Or it could be a different person (not the subject)
If you see one of these LE records - there's a spot for it in FDNS-DS

The LE code defines those who qualify for watchlisting and lays out the corresponding LE codes based on types of national security concern. Watchlist exceptions are those whose category codes are NOT considered known or suspected terrorist, but are considered eligible for inclusion in downstream screening systems in support of immigration and border screening processes. Only two of the watchlist exception codes, LE... are treated as watchlist exceptions by USCIS. All other watchlist exception codes are treated as KSTs by USCIS.

Note that the
Identifying KST NS Concerns

How does USCIS handle KSTs?

- For any suspected match to a LE Tecs record, the USCIS designated officials must contact the Terrorist Screening Center (TSC) for verification of a match (including LE category codes).
- The TSC will:
  - Verify that the subject being vetted by USCIS is a match to the TSDB.
  - Alert the Terrorist Screening Operations Unit (TSOU).
  - TSOU will contact the case agent, who may then contact USCIS.

**USCIS does not** contact the National Targeting Center (NTC) or LE.

**USCIS does not** externally vet or deconflict with the LE.

Please note that you are to call the TSC to confirm a KST hit, only CBP contacts the NTC, not USCIS (in relation to LE records).

"Suspected match" in this context means anything that cannot be definitively ruled out as not relating to the individual queried.

- For example, if the gender and SSN of a LE record do not match your subject, that's pretty conclusively not your person.
- But if all that's in the record is first name, middle initial, last name, and those all match your subject, that's a suspected match.
Identifying KST NS Concerns

What will the TSC need to confirm the match?

- A TSC Request Form.
- Copy of the completed application/petition, including G-325A (except for Asylum related Applications).
- Photos (if not available in A-file it may be retrieved through CPMS, NSEERS, AFI, CPMS, etc.), including any pictures provided in support of the application.

Contact TSC via email: [Redacted]

Contact with the TSC is done by email
The TSC request form is a template
The TSC request form is posted to your class page under Handouts

TSC Request Form
Identifying KST NS Concerns

KST NS Concern Recap:

- To have a KST you must have a [LE]
- The [LE] must have a KST category code indicating that the individual is on the watchlist
- Category code should not be [LE] because those are exceptions and are not watchlisted KSTs
- There should be an associated [LE] record, but the KST determination is based on the [LE]
- There is no way to have a KST concern other than a [LE] record with a KST category code
- The TSC must confirm that the record relates before USCIS determines that it’s a KST NS Concern
- If an individual has a [LE] with a KST code, they are a KST for as long as that record exists in TECS, regardless of any other vetting
Identifying KST NS Concerns

Example: Studies in National Security - KST Case Study
These slides are discussion based only and are meant to show the class different requirements for KST NS Concern documentation:

There are several unique things that you're going to do for KST concerns in FDNS-DS

You must identify the case as a KST

If you identify it as a KST, what is your source of information? TECS!

If you have a LE TECS record, is it a good idea to write down that record somewhere?

You can document the TECS record number and other information from the TECS record...
The other place you can document the KST TECS record is in the "[REDACTED]."
Just make sure you write your [REDACTED] record # (or #s) down.
Documenting KST NS Concerns

How do you document TSC confirmation in FDNS-DS?

- TSC cannot be contacted for deconfliction...
- But the identity verification of a LE record is documented in the deconfliction section of FDNS-DS.

What else do we have to do for a KST?
Very first thing, before we even know a case is a KST NS concern and start our documentation...
Verify with the TSC!
TSC verification of a LE record gets documented, even though it is not technically a deconfliction.
Identifying NS Concerns

Stage 1, Initial Identification

Sources of Information for Non-KSTs
Identifying Non-KST NS Concerns

What is a Non-KST NS concern?

- Non-KSTs are NS concerns that have not been nominated to the Watchlist as a KST but still have a connection to the INA NS grounds.
- Non-KST NS concerns include (not an exhaustive list):
  - Watchlist exceptions;
  - Saboteurs;
  - Weapons or technology proliferators;
  - Agents of foreign governments etc.

Why is the entire phrase “Non-KST NS Concern” important?
It emphasizes that a non-KST is still a National security concern.

Students should not forget that non-KST doesn’t mean its trivial or unimportant – it’s still a national security case – Non-KSTs should be treated the same as KSTs in terms of the vetting process and ascertaining the threat of the NS concern—they are merely documented differently in FDNS-DS and have different process for ultimate resolution on the case depending on eligibility for the benefit.
Identifying Non-KST NS Concerns

Other Potential Non-KST NS Concern Examples:

- TECS record indicates an ongoing or closed JTTF investigation/interest.
- Association with KSTs (via travel, addresses, business, religious or social activities).
- Indicators of Investigative Hits involving NS Activity.
  - Suspected illegal export of “dual use” items.
  - Breaking transactions larger than $10,000 into smaller amounts (structuring) in support of terrorist activity.
- NaBISCOP Appendix C has a listing of common terms and acronyms in TECS that may relate to national security.
Identifying Non-KST NS Concerns

How does USCIS identify Non-KST NS Concerns?
Identifying Non-KST NS Concerns

FBI Letterhead Memorandums

- LHMs are not always for open concerns
- No NS concern exists if a law enforcement or intelligence agency indicates in an LHM that:
  1. They have completed and closed their investigation, and
  2. They make a definitive finding of no nexus to national security in relation to the USCIS subject, and
  3. There is no other indicator of a NS concern.

Just because the FBI says they closed their case, does that necessarily mean they resolved the NS concern? NO

Just because they don’t have a concern, could USCIS find another indicator in some other vetting? YES
Identifying Non-KST NS Concerns

LHM Classes of Investigations that relate to NS concerns

- Foreign Counterintelligence;
- Acts of Terrorism (International, Domestic);
- Hostage-Taking;
- Terrorism;
- Arms Control Treaty Measures;
- Sabotage;
- Actual & Attempted Bombings & Explosive Violations;
- Threaten or Attempt to Use, Possess, Produce or Transport of Weapons of Mass Destruction (WMD); or,
- Use, Possession, Production or Transport of WMD.

These are the classes of LHMs that relate to NS
If you see one of these referenced, do you think that's enough evidence for CARRP?
Identifying Non-KST NS Concerns

FBI Fingerprint Categories: Examples that relate to NS concerns

- LE
This is a sample of a RAP sheet

It says known or suspected terrorist on it! – Why is it in the non-KST category?

Because KSTs don’t come from LHM; they only come from people who are on the watchlist
Weighing the Evidence

Example: Studies in National Security: Seemingly innocuous arrests
Identifying Non-KST NS Concerns

Which watchlist exceptions does USCIS process as NON-KSTs?

- Not all KSTs.
- TECS records beginning with LE codes or:

  LE

- These records have a LE because they originated from the TSC.
- **Contacting the TSC for match verification is still required...** but these exceptions are handled under CARRP as non-KST NS Concerns.

Instructors LE are also considered watchlist exceptions by the interagency community – however, present USCIS policy treats them as KST. LE
This is a [LE] with an [LE] code. Why is this in the Non-KST category?

What's different about this [LE] compared to the ones we saw earlier?

Remember that there were two types of watchlist nominations: KST and exceptions.

[LE] is a watchlist exception code.

Per USCIS policy (which aligns with broader USG watchlisting efforts), [LE] are non-KST.

Data on [LE] is exported downstream to TSDB and produces [LE] records.

But the category code means that the USG has insufficient information to actually put the individual on the watchlist.

So they are considered an exception.

And they are a non-KST even though there is a [LE] record.
Identifying Non-KST NS Concerns

Example for Training Purposes Only

LE

Code: Former

LE

The other exception

LE is the watchlist code for LE

Reiterate: LE are to be treated as Non-KSTs

You still call the TSC to confirm

You still put them in CARRP

But they are non-KSTs because they are watchlist exceptions

They are in TSDB, which is where the LE come from, but they are not on the watchlist
We saw this exact screenshot before.
It's the LE cord relating to terrorism.
The LE field clearly states LE.
Identifying Non-KST NS Concerns

LE Former TECS Platform

Example for Training Purposes Only

Unclassified // FOUO // Law Enforcement Sensitive

39

This is a different [LE] record - you can see [LE] at the bottom.
It's really three screens worth of NCIC data on one page, which is why it looks different.

So why is this in the non-KST section?
Because it's a [LE].

The [LE] on this one doesn't say [LE], it says [LE], so you would not contact the TSC on this example.

So again, make sure you are carefully examining system checks, documents in the A-file, anything associated with a CARRP case.
Identifying Non-KST NS Concerns

TECS Codes

- LE records come from the TSC
- Other common person record endings:

Not all of these are NS Concerns
And just based on the code, you can’t tell
You need to consider the nature of the record, the text of the record, the other facts of the case
And we’re talking about the ending on the person record – the part where you see LE
How many of these indicate a potential NS concern?
Identifying Non-KST NS Concerns

TECS Codes (continued):

- **LE** codes reflect the watchlist category code
- What else can be in that field?

Are all of these codes and all the 212a3 referrals inherently NS?
No, they are not
But what about SGN’s? What about referral “cheat sheets” in the service centers?
Just because something gets referred by a cheat sheet or by an SGN still doesn’t mean it’s automatically NS
Those referrals are no different than adjudications referring a case
The CARRP trained officer still needs to determine – independently, using their subjective judgment, based on the definition of an NS concern and all of our models and equations and paradigms – if an NS concern is present
The only automatic CARRP case is a TECS record ending in [LE] – that is it
Do not rely on labels and record endings to tell you if something is an NS concern!
These screenshots are of an LE lookout.

In the remarks, they talk about the individual being in the TSDB. That's most of the same language that we see in LE records.

So how would we handle these records?

Are they NS Concerns? NO

Indicators of a concern? Could be

A watchlisted KST? NO
Identifying Non-KST NS Concerns

Other CBP Systems & Queries

- ATS-P = Automated Targeting System (Passenger)
  - Contains travel records and information
  - Also includes secondary inspection results and information, including notes from CBP
  - May also show the targeting rule that an individual was referred under

- ADIS = Arrival / Departure Information System (can also be accessed through TECS now)
  - Older system but provides a detailed display of entry / exit records
  - Permits searches by multiple criteria with a different name search algorithm than ATS-P
Case Study:

Indicators from Travel

Review page 2 Referral Information and Referral Remarks with students
Review page 6 Description and Referral Remarks with students
Does this warrant a referral to CARRP?
Case Study:

Sen. Cruz Rahami Letter

- This is a letter to DHS from the Senate Judiciary Committee
  The letter is in regards to the bombing attacks in New York and New Jersey committed by Ahmad Khan RAHAMI
  Focus on the bottom of page 1 through midway on page 2
  This is a similar fact pattern to what we just saw on a totally different case in ATS-P
  We're still not saying that last case should have been in CARRP, and we're not necessarily saying that USCIS did anything wrong in RAHIMI's case, but these are the kind of things we need to be paying attention to.
  This letter is available in the public domain – it's posted to Senator Cruz's website in its entirety
Identifying Non-KST NS Concerns

CCD and SAO

- CCD = Consular Consolidated Database
  - DOS system holding the records of individuals applying for visas abroad
  - May include reasons for a visa refusal and copies of the visa application

- SAO = Security Advisory Opinion
  - An SAO is the manner by which the State Department asks other agencies of the USG for information / input
  - SAO's are submitted selectively based on the profile of the visa applicant
  - Not all SAO's are derogatory
  - SAO's help Consular Officers to make accurate adjudicative decisions

- Within USCIS, SAO's are an adjudicative tool in refugee cases
Identifying Non-KST NS Concerns

Consular Consolidated Database (CCD):

LE

Unclassified // FOUO / Law Enforcement Sensitive
Identifying Non-KST NS Concerns

IDENT

- IDENT is the DHS biometric database.
  - Next Generation Index (NGI) is the FBI biometric database.
  - Automated Biometric Information System (ABIS) is the DoD biometric database.
- IDENT data set is accessed through CPMS.
- USCIS, CBP, ICE and other DHS component data is fed into IDENT.
- IDENT may contain hits from DoD holdings, information on immigration violations, and encounter data.
- Everyone has a watchlist, but...
  - IDENT watchlist is not the same as TSDB watchlist.
  - IDENT watchlist contains arrests, DOS records, DoD encounters, fraud, etc.
We don’t access IDENT through US VISIT anymore
But the query results look pretty similar
It’s reporting biometric encounters, including at our ASC’s
Major Talking Point: CPMS also enables you to check some DoD records and display the results of FBI queries. But an FBI Fingerprint response of IDENT is still different than the DHS database IDENT.
Identifying Non-KST NS Concerns

CPMS

LE

Unclassified // FOUO / Law Enforcement Sensitive

This is some of the language that someone actually found in CPMS for a military biometric encounter
Identifying Non-KST NS Concerns

Self Reporting and Identification of a Non-KST NS Concern

(i.e., presence or travel, association with questionable groups, or involvement in criminal or terrorist activities).
- It's unlikely someone is going to volunteer that they're a terrorist or a spy
- But what could they tell you?
Weighing the Evidence
Case Study:

Death Certificate

This is an actual piece of evidence provided by an applicant.
In the parts that are translated, note a couple of interesting phrases:

LE

Is this a sub-par translation? A little bit, Yes...

______________________________
Sources of Information
Recap: KST vs Non-KST NS concerns

Non-KST NS Concerns
- FBI Fingerprint Check
- FBI Namecheck
- IDENT
- Applicant Testimony

KST NS Concerns
- TECS Records

TECS Records can be either a non-KST... or a KST NS Concern.

The code (representing the TSDB category code) indicates whether an individual is in TSDB under a KST category code or is a watchlist exception. All KSTs are in TSDB with a KST category code and therefore are represented in TECS by a LE record. Non-KSTs can be identified in a variety of ways, including through records with a watchlist exception code.
Identifying Non-KST NS Concerns

When LHM’s may be non-derogatory:

- e.g. 

  - Has to go in CARRP to obtain the information...
  - But the LE may end up not being derogatory.

- e.g. 

Not every record from the sources we just covered ends up being national security related

We talked about SAQ’s not always being derogatory
We talked about the LE hit already – if it’s gang related, it may not be NS. It’s derogatory information but not NS information
We see derogatory information that isn’t NS from LHM’s and TECS and USVISIT all the time, right? – money laundering, fraud, etc.
So just because it’s in one of the systems we just talked about – does not equal NS concern
What’s important is the actual information contained in the background check result
In the same way that our sources of information do not always give us NS info, some of it may not even be derogatory at all!
A positive fingerprint or namecheck, an IDENT encounter, a LE a FDNS-DS record… are not automatically CARRP referrals
Identifying Non-KST NS Concerns

When fingerprint records may be non-derogatory:

LE

When FDNS-DS records may be non-derogatory:

LE

The DS record is then closed out as Non-NS
Identifying Non-KST NS Concerns

Non-KST NS Concern Recap:

- Non-KSTs can come from anywhere, not just records / hits or law enforcement
- The information in a record or in testimony is what’s important – *not* the mere existence of a hit or a record
- Testimony and / or what’s in the immigration record is just as important as law enforcement records
- Non-KSTs can be subjective, especially when they’re *not* coming from TECS, the FBI, or fingerprint records – Therefore, properly weighing the evidence is critical
Why are we only looking at evaluating non-KSTs here?
Because KSTs are definitive
Someone is either on the watchlist or they’re not
And if they’re on the watchlist, we don’t question why (as part of identifying a concern up front)
So this section is going to focus on the evaluation step of stage I
We’ve covered where the concerns come from – how a potential NS concern gets discovered and referred
And with KSTs we’ve covered how you evaluate post-referral – contact the TSC and decide if it’s a KST or a watchlist exception
Identifying NS Concerns

Roles

- Domestically (FOD and SCOPS) focus is on the activities an individual is connected with, without deep consideration of timeframe and target in the identification stage
  - Remember CARRP as a yellow traffic signal: use the process to get country condition research, group histories, etc.
  - Potential concerns in SCOPS are referred to CARRP BCUs for evaluation
  - Potential concerns in FOD are referred to local FDNS units for evaluation
- SCOPS Officers work applications from all over the country and encounter a broad range of populations, organizations, and case types
- FOD May have familiarity with groups / populations in their office area, but generally have less time and depth of research than RAIO officers identifying concerns

Major Point: These challenges are the reason we tell people to focus on activities with which a person is connected and the intent of those activities, rather than when the activities happened or whom they were directed against
Identifying NS Concerns

Roles

• RAIO → NS concerns may be identified during pre-screening in systems, but are more frequently derived from the interview
  - Reinforces that NS concerns can be identified at any point while working a benefit request
  - AOs and ROs conducting interviews must be able to spot NS indicators when an applicant is already sitting in front of them
• RAIO   Refugee Affairs Security Vetting and Program Integrity automatically pre-screens certain cases for NS indicators (including through classified system checks) and provides additional guidance for the interview as necessary.
• RAIO   Asylum pre-screens certain cases based on local FDNS jurisdiction and RAIO FDNS IOs conduct case-by-case review upon request.

Interviewing:
All officers in RAIO inquire into all activities or associations of possible NS concern identified pre-interview or during the interview itself.
Refugee and International Operations- officers are required to ask certain inadmissibility questions that are related to NS concerns for every applicant and dependent.
Asylum- officers are required to ask certain mandatory bar questions related to NS concerns of every applicant and dependent age 14 and older.
This is our equation that we looked at before
This is your paradigm for determining if there's an NS concern based on each individual element
You need a nexus to one of the statutory NS grounds
You need a person or organization
And you need something to link them together
Our person / org comes from any of our forms that are submitted
Our NS grounds come from the law
We're about to go more in depth on each of the parts of this definition
Identifying NS Concerns: Individuals

- Individuals come from forms...
- But policy differentiates between status granting forms and other types of forms and petitions...

<table>
<thead>
<tr>
<th>BENEFIT TYPE</th>
<th>CARRP Stage I?</th>
</tr>
</thead>
<tbody>
<tr>
<td>I-90</td>
<td>YES</td>
</tr>
<tr>
<td>Ancillary Benefits (e.g. concurrently filed I-765 or I-131)</td>
<td>YES</td>
</tr>
<tr>
<td>Non-status granting applications / petitions (e.g. 3rd preference I-140)</td>
<td>YES</td>
</tr>
<tr>
<td>Petitions filed with a primary application (e.g. I-130 / I-485)</td>
<td>YES</td>
</tr>
</tbody>
</table>

So, it's time to talk about where the people / organizations come from.
The things that we know about people / orgs. Come from background checks and interviews and the forms they submit.
We use that info to decide if someone is an NS concern.
Except that we don't treat all applications and petitions, and, by extension, all people, the same.
We know that some applications – asylum, permanent residence, natz. – get referred to CARRP, but what about other benefit types?
What's the common link between all the things on this chart?
Answer: they may not go through ALL of CARRP, but they're all still subject to some part of it.
Which part? – Stage I.
No matter what the form, we identify concerns, and we document them – that's Stage I.
Even if it happens post-adjudication (like I-90’s), it's still Stage I.
Even if we don't vet and resolve the NS concern, it's still Stage I, and therefore still CARRP.
So for our ancillary and non-status granting, we talked about how they all go through some part of CARRP. These types of forms go into CARRP at least for the purpose of identifying and documenting the concern and then conducting deconfliction.
Our major takeaway: DECONFLICT and document EVERYTHING IN FDNS-DS, no matter the benefit type; however, some benefits must be granted while the NS concern remains.
We talked about this chart before and emphasized that some things – drugs, money laundering, human rights – aren’t on here.

Let’s add another important point: this chart mostly doesn’t specify targets.
Handout: DOS Mantis Tech Alert List

How could we identify some sensitive technologies?
Here's one example - DOS Mantis Tech Alert List

[Redacted]
Evaluating NS Concerns

Additional considerations about NS Grounds:

- The grounds are part of *identifying* a concern - but even though they are from the INA, they are generally not what we’re going to cite as a basis for ineligibility in a decision.

- Although the basis of a concern is connected to an INA ground this may not directly be reflected in the final adjudicative decision i.e. (An NS case can be denied on other grounds unrelated to the NS concern, such as an ineligibility provision.)
Application Exercise 4.1
“Open Source Fact Patterns”
(continued)

“NS / Non-NS Open Source Fact Patterns”

Materials: Word document link-list on ECN
Estimated Time: 30mins.
This exercise continues training students to consider the facts present and ensure that there is an area of NS concern. Use the instructor guide to cover the second half of the news articles (more complex fact patterns for this half).
***Remember – not everything we see on the internet has trustworthy sourcing; there is a lot of mis-information out there so be careful when using open sources. Later in module 5, we will discuss some potential pitfalls with open source vetting.
So this is the chart where it starts to come together

We've been talking about the equation, and how those three elements make an NS concern

What was the summation of the equation? If you have all three elements, you have an NS concern

This is how the two models fit together

Every time, you should think to yourself:

Do I have an individual or organization?

Do I have an NS ground?

Do I have a connection between them?

If I do, is my NS concern a KST or non-KST?

If it's non-KST, is it confirmed or not confirmed?

Now, we've covered the individual / organization part

And we've covered the NS grounds

But we've left the middle part deliberately vague

The connection to the NS ground is really either an articulable link or indicators (and / or both)

And that's what we're going to talk about a some length in the next two sections

And please note the placement of the equation – it's BEFORE you determine KST vs. non-KST and BEFORE you determine Confirmed or Not Confirmed
The Connection

Indicators vs. Articulable Link
- Both ties that connect a person / organization to an NS ground
- Both based on evidence – known facts
- But indicators and articulable links are not in opposition to each other: They’re both intervals on the same spectrum

Indicators and Articulable link are simply different levels of evidence
Evidence is nothing more than the facts that we have in the case
So when we’re talking indicators and articulable link, what we’re really asking is: how good is our evidence?
What facts are present that are leading us to think there’s a connection between the person and the NS concern?
And the same as any other evidence, the facts we’re looking for must be relevant and material
So... when you think of indicators and articulable link, they are not a two-tiered system of more important and less important concerns; they’re different levels of evidence on the same spectrum
If you start out as non-KST NS Not Confirmed, as you move through the stages of CARRP, you can find more information that shows you a clear link and allows you to change to Confirmed
This applies to both KSTs and non-KSTs
KSTs require an individual and a nexus to NS – the articulable link is already given to us by law enforcement... the person has been accepted for placement on the terrorist watchlist.
Why is this important?
It impacts how we report the NS caseload to leadership
It affects prioritization of NS cases
But: in the field, all the vetting is the same for both Confirmed and non Confirmed Non-KSTs
A Practical Example

Consider the following:

You come home from work one day, and...
- There are tire marks in your driveway
- There are also muddy boot prints all over your front walk
- A window is broken in the yard next to your backdoor
- Your plasma TV is missing

- We’re all familiar with criminal TV shows which describe evidence and evidentiary standards from criminal cases
  Everyone has probably seen Law and Order or NCIS or one of these criminal procedurals TV shows
  So let’s consider for a moment indicators and articulable in a criminal context
  If there are tire marks in your driveway, are you worried about anything being wrong?
  What if there are also muddy boot prints on your front walk?
  Do you think something nefarious has happened?
  Is there any evidence that suggests a criminal activity?
  Are there other plausible explanations?
  What if now you see that the window by your back door is broken?
  Do you think that all the evidence you can see is enough to call the police?
  If you’re going to call the police, are you sure that a crime has taken place?
  And now you go in to the house and your plasma TV is gone
  So, at what point did we have sufficient indicators that a crime occurred that we weren’t comfortable just going about business as usual?
  And at what point did these facts add up to an articulable criminal activity?
A Practical Example

Another way of thinking about indicators:

Consider an assembly line...

- Each step in the process of building a car is small enough
- But by the time those little things add up, the end result is significant

Indicators work the same way...

- Each one by itself is small,
- but a bunch of them put together can add up to something big
Indicators

DISCLAIMER: NONE OF THESE INDICATORS BY THEMSELVES MEAN SOMEONE IS AN NS CONCERN

Examples of *possible* indicators:
(a non-exhaustive list)

![Indicators List]

But: a sufficient amount of indicators (based on the totality of circumstances) may cause us to take a closer look via CARRP

Unclassified // FOUO // Law Enforcement Sensitive

So what are some examples of indicators?

None of these things are themselves derogatory or constitute a nexus to NS... but if you look at the entire body of evidence, maybe then it relates to an area of NS concern

Can you refer a case to CARRP just based on indicators?
YES – we do it all the time

Just because the link between the person and the NS ground does not rise to the evidentiary level of Articulable link, it can still be a CARRP case

NS Confirmed rises to the level of an articulable link
NS Not Confirmed is based on indicators
Another good open source tool is the site EVVE – Electronic Verification of Vital Events. EVVE is operated by the National Association for Public Health Statistics and Information Systems (NAPHSIS) and provides customers with the ability to quickly, reliably, and securely verify and certify birth and death information.
Application Exercise 4.2
“Indicators”

We just considered evidentiary standards in criminal, non-NS example.
Now let's look at weighing evidence in an immigration specific context to see if we can identify an NS concern.
Students should review the N-400 pdf document (they were sent a link to this N-400 on the first day of class). Students should take note of / write down any item they consider to be an NS indicator for class discussion after the review period.
Instructor: refer to the instructors guide for talking points and items to highlight for the class as indicators (in case they miss them). Ask the class if they would refer the case based on N-400 review alone and no other hits evident.
Articulable Link

- An articulable link exists when:
  You can describe ...
  in a few simple sentences ...
  a clear connection between a person ...
  and
  an activity that threatens the safety and integrity of the United States or another nation.
- Cases with an articulable link to national security must be handled according to CARRP.

So now that we've covered indicators and talked about the evidentiary standard we're looking for...
The next question is when we pass from having indicators to having an articulable link
- So now we're going to talk about the middle component of our equation: articulable link
This is the part that is tricky, so we're about to take you through the structured framework on how to do it
The framework is designed to provide a consistent means of thinking about articulable links
One more note - we are concerned with finding the articulable link primarily with non-KST NS concerns
Our equation applies to identifying anything that will be handled in CARRP, but we defined KSTs earlier as being on the watchlist
Well, for KST cases, that's enough of an articulable link -- "Jon Smith is on the watchlist for terrorism."
As you'll see, non-KSTs are a little trickier, because there will not be one piece of information that conclusively tells you
this person is an NS concern -- you may have to "link" together a bunch of disparate indicators
Articulable Link (Continued)

- A connection may be:
  - Conducting a criminal act;
  - Belonging to or speaking for a particular organization;
  - Providing money or material support; or
  - Many other associations between an individual and an area of an NS concern.

- An articulable link requires more than a “gut feeling.”
- The key is whether you can define the nature of the connection.

- **Caveat**: It is impossible to list all of the ways that an individual might have an “articulable link” to a national security concern. What follows are examples of how subjects can be linked.

This looks very similar to the indicators slide, right?
That’s because your evidence for both, the facts that support your determination, are the same kinds of things Articulable link takes more than a “gut feeling” – and more than indicators!
Putting the Pieces Together

You have now articulated a link between Bob and a National Security Concern

Subject: Bob
A group who...
Terrorism

Belongs
Gives Money to
Launders
Speaks For
Gives Money to
Helps Conduct
Supports
Conducts
Plans

When determining whether there is an articulable link, you must be able to make a connection between the actions and the terrorist organization or terrorism related grounds.

In this example, there is a subject, Bob
And there is an NS ground – terrorism
The rest of the puzzle pieces can be used to assemble a link between Bob and terrorism
(remainder of slide is animated to demonstrate conducting a link)
Strong Direct Link

- The strongest link is apparent when the Subject is actively participating in those activities:
  - "Bob Smith has filed an I-485, and was arrested for trying to plant a bomb at the United Nations."
- Here, you can draw a single, direct line between the Subject and the national security activity.

Now, we all know that real life isn't quite this simple
But the goal of the structured framework is to get everyone thinking in the same way
You will see straightforward fact-pattern cases and more complicated ones, but the method of thinking of them is the same
Handout:

Structured Framework for Articulating Links to National Security
Studies in National Security:

Articulable Link Writing 101
Application Exercise 4.3
“Articulable Link Writing”

One colored folder per group of 2 people (so there will be some duplicate folders distributed). The students should review the facts in the folder and make an assessment if the applicant belongs in CARRP and as what type of concern (KST or NON-KST?). Students should also be able to clearly state what the NS concern sub-status would be: confirmed (articulable link) or Not Confirmed (based on indicators). If articulable link, have each group state their articulable link (i.e. person, connection and NS ground).
In the exercise we just completed, what would you do if you weren’t certain if one of the groups someone was connected to (like Sendero Luminoso) was a terrorist organization?
Where could you look? DOS Country Reports on Terrorism and TRIG ECN.
Evaluating NS Concerns Recap:

- It's all about the facts – identifying concerns is about assessing the facts we know, regardless of where they came from, but...
- Facts come from a variety of sources – some of those sources are more reputable than others
- Some facts are also more derogatory than others (remember the idea of inference of culpability) – do the facts suggest that the subject of concern was knowingly or deliberately involved with one of our NS grounds?
- Identification is just the beginning – we can still resolve concerns after they're identified – identification just means that there is a potential concern that we need to carefully consider and thoroughly document.

In this module, we've shown you facts that came from forms, facts that came from testimony, facts that came from TECS records and FBI LHMs and even facts that came from newspaper articles.

Major Point: The reason we do that is because identifying concerns isn't about where the facts come from – it's about consistently weighing those facts using our models and our thought process to identify if a concern is present.
Wrap-up: Evaluating NS Concerns

Relying on Law Enforcement

- If a law enforcement or intelligence agency tells us that their investigation uncovers a threat to national security, we will consider that case a national security concern.
  - This concern could be NS Confirmed or NS Not Confirmed, depending on the specific information provided.

- The opposite, however, is not necessarily true: Even if another agency tells us that an individual does not threaten the national security, USCIS can still handle a case under CARRP.
  - If you identify an area of national security concern, and suspect that the applicant may be involved with it, USCIS may still be able to articulate a link.

Similar to law enforcement determinations: country determinations
It doesn't matter if the country accusing you is credible – if a foreign government designates you a terrorist, than that's an articulable link
It may be disproven in the course of vetting
We may grant a waiver for the activity because it was on our behalf
But it's still an articulable link
Wrap-up: Evaluating NS Concerns

Ongoing Review

- Many times, articulating a link (or determining that no link exists) cannot be accomplished purely from file review.
- This may require contact with another agency, or research in another system.
- As new information is received officers should review and determine whether or not the evidence supports an articulable link.
- Until a definitive judgment is reached about whether an articulable link exists, the case must remain open.
Stage 1 Recap

Identifying NS concerns

FACT or FICTION?

Positive FBI Name checks are always an NS Concern

FACT

Individuals can be removed from the terrorist watchlist

FICTION

If there is no articulable link to an NS concern, it’s not a CARRP case

FICTION

All LE records related to terrorism
Stage 1 Recap

**NS Determination Questions:**

- Does derogatory information exist?
- Does the derogatory information relate to the subject?
- Is the derogatory information still applicable?
- Does the derogatory information relate to an NS ground from the INA?
- Are you familiar with all of the employers, addresses, institutions, people, etc. listed or discussed by the applicant?
- Does the evidence add up to a strong enough connection between person and NS ground?
Stage 1 Recap

Roles

- All RAIO FDNS and SVPI officers and field and service center ISOs are on the front lines!
- Identifying concerns EVERYONE
- Confirming with TSG FDNS IO (field and asylum offices)
- BCU CARRP ISO (service centers)
- Writing articulable links CARRP ISOs, FDNS IOs, or AOs
- Concurring with articulable links Supervisor or designated officer
- FDNS-DS entry FDNS IOs, CARRP ISOs, SVPI ROs
- Who in your office reviews CARRP referrals and assigns CARRP cases?
Stage 1: Identifying NS Concerns

- Use all available evidence to identify a potential NS concern.
- Differentiate between indicators and articulable link as the connection between an individual and an NS ground.
- Distinguish between KSTs and non-KSTs.
- Identify sources of information for KST and non-KST determinations.
- Understand the watchlisting process.
Identifying NS Concerns

Stage 1, Documenting an NS Concern
Sub-status, process phases and Articulable Links in FDNS-DS

The next few slides are discussion based only and are designed to show the class where to document articulable link and how to update the sub-status.
If you have an articulable link, your case is logged as NS confirmed in the sub-status of the CME.
You must also write out the articulable link.
And then you must get someone to agree with you.
Why do we make you do this?
Because it's subjective! We've talking in depth about how this is a judgment, and sometimes people just see things different ways.
But we're going to view Confirmed and Not Confirmed a little differently at the HQ level, so an accurate distinction is really important to us.
Why do we not make you do this with indicators?
Because what are you going to write down? There's no firm, couple of sentences, describable link!
So here's how you write it down
And we have a question in our quote bubble on the bottom...
Did our supervisor here mess up? [REDACTED]
[REDACTED]
Classified Information

When Articulable Links are Classified

- Classified LHM’s often raise NS concerns, but...
  - Classified information ≠ “NS Confirmed”
  - An articulable link is still required for selecting NS Confirmed
- To base an articulable link on classified information, both officers should write in the comment field of their recommendation:
  "Discussed case with Officer -----. An articulable link is present. The articulable link is based upon classified information in an LHM."
- You should still discuss the articulable link with a second officer.

Please remember that the presence of classified information doesn’t automatically mean NS Confirmed, or even that there is an NS concern at all. In fact, the classified information may not even be derogatory in nature.
Documenting in FDNS-DS

REMEMBER...

Recommendations get lonely, so they always come in pairs
