DEATH QUALIFICATION IN WYANDOTTE COUNTY, KANSAS REPORT OF MONA P. LYNCH

- 1. I am a Professor of Criminology, Law and Society at the University of California, Irvine, with a courtesy appointment in the School of Law.¹ In addition, I serve as Co-director of the Center in Law, Society and Culture at the University of California, Irvine. A copy of my vitae is attached as Appendix A.
- 2. I have extensive training in social science research methodology and have taught undergraduate- and graduate-level research design courses. I have served as a consultant/expert witness on several governmental committees focusing on crime related issues, and on multiple criminal cases. Since 2014, I have served as a consultant/expert witness on twelve capital cases on the issue of death penalty attitudes, death qualification, and race. Prior to conducting the survey in Wyandotte County discussed in this report, I conducted five distinct surveys of jury-eligible adults in four California counties assessing jury-eligible citizens' views on the death penalty, potential for disqualification, and views of aggravating and mitigating evidence, and one survey of jury-eligible adults in Sedgwick County, Kansas. I have also conducted experimental research on how death-qualified adults consider evidence and make decisions in simulated capital penalty trials.
- 3. In early 2024, I was contacted by counsel for Antoine Fielder to conduct a survey of a sample of the Wyandotte County, Kansas jury-eligible population (the "Wyandotte County Study"). Specifically, in conjunction with Lois Heaney of the National Jury Project, I was asked to focus on the risk of exclusion from serving on a capital jury as a function of death penalty attitude, race, and gender. In light of my professional experiences, I am qualified to design and

.

¹ UC Irvine's Criminology, Law and Society Department is ranked 2nd in the nation among criminology programs (https://www.usnews.com/best-graduate-schools/top-humanities-schools/criminology-rankings).

implement such a study.

4. I relied upon the existing published research on the death penalty, including my own previous research, and Kansas's statutory framework when developing the Wyandotte County Study's survey instrument and analytic protocol. The sampling design and data analysis strategy discussed herein are based upon current scientific standards for conducting survey research.

Prior Empirical Research on Race, Death Qualification, & Jury Decision-Making

A large body of social science research documents that Black and White Americans diverge in their views of the fairness and equitability of the criminal justice system. For instance, recent national surveys by Pew Research Center found that "around nine-in-ten black adults (87%) said blacks are generally treated less fairly by the criminal justice system than whites, a view shared by a much smaller majority of white adults (61%)" and that "79% of blacks – compared with 32% of whites – said the way racial and ethnic minorities are treated by the criminal justice system is a very big problem in the United States today." Black adults (85%) are also more likely to agree that "Black people are more likely than White people to be sentenced to the death penalty," relative to White adults (49%). The racial gap in concerns about fairness in the system is longstanding. Political scientists Jon Hurwitz and Mark Peffley analyzed data collected between October 2000 and March 2001 from the National Race and Crime Survey, finding that "while 74.0% of blacks do not agree that the justice system treats people

² Jon Gramlich, From Police to Parole, Black and White Americans Differ Widely in their Views of Criminal Justice System. Pew Res. Ctr. (May 21, 2019), https://www.pewresearch.org/fact-tank/2019/05/21/from-police-to-parole-black-and-white-americans-differ-widely-in-their-views-of-criminal-justice-system/

³ Id. See also James D. Unnever & Francis Cullen, Reassessing the Racial Divide in Support for Capital Punishment: The Continuing Significance of Race, 44 J. of Res. in Crime and Delinq. 124, 146 (2007) ("African Americans and Whites do not conceptualize 'American justice' in the same terms. Where White citizens tend to see the scales of justice as reasonably balanced, their African American counterparts believe that unfairness, based on race, is integral to the operation of the criminal justice system.").

⁴ Pew Research Center, *Most Americans Favor the Death Penalty Despite Concerns About Its Administration* (June 2, 2021), https://www.pewresearch.org/politics/2021/06/02/most-americans-favor-the-death-penalty-despite-concerns-about-its-administration/

fairly and equally, only 44.3% of whites express similar sentiments. . . [,] with 61% and 26% of blacks and whites, respectively, who do not trust the courts to give a fair trial." A substantial body of research also indicates that White people are much more trusting of police across a range of dimensions than are persons of color, especially Black people, including in regard to their equitable racial treatment of citizens. A 2015 literature review of 92 studies found that "individuals who identified themselves as black, non-white, or minority were more likely to hold negative perceptions and attitudes toward police as compared to whites."

6. Black Americans are historically more likely to oppose capital punishment,⁸ a long-term trend that continues to the present. In 2006, criminologists John Cochran and Mitchell Chamlin noted that White Americans' greater support for capital punishment as compared to Black Americans was "so robust that it was observed in nearly every public opinion poll and social scientific survey undertaken within this country over the past fifty years." Other criminological research has found that, over a thirty-year period, "African Americans are substantively less likely than whites to support the death penalty." Specifically, the researchers found that 39.9% of Black respondents, compared to 69.8% of White respondents in 1974, and

41.7% of Black respondents compared to 72.5% of White respondents in 2004 supported capital punishment. Overall support for the death penalty has since declined, particularly when respondents are presented with the alternative sentencing option of life without parole. Nonetheless, the Black-White gap remains. A 2018 Pew Research Center survey found that 59% of White survey respondents favor the death penalty for those convicted of murder compared to only 36% of Black respondents. A 2021 Pew Research Center survey found that 63% of White survey respondents favor the death penalty for those convicted of murder compared to 49% of Black respondents. Two surveys conducted in a California county found that, among respondents to a 2014 survey of jury-eligible individuals, 70% of White respondents favored the death penalty, compared to only 45% of Black respondents; in the 2016 survey, 66% of White respondents expressed support compared to 27% of Black respondents.

7. Studies indicate that White and Black capital jurors differ in their assessments of penalty-phase evidence and in sentencing verdicts, and White men in particular are more likely to support a death sentence. One large, multi-state research project, the Capital Jury Project, conducted interviews with hundreds of jurors who served on capital trials over a total of 14

jurisdictions.¹⁷ The researchers found that White capital jurors gave less weight to mitigating evidence presented in capital cases than Black jurors did, especially in cases involving Black defendants; consequently, they were more likely to support a death sentence than their Black counterparts.¹⁸ An examination of the first votes on sentencing among jurors who served on South Carolina capital juries found that White jurors were more than twice as likely to vote for death at that stage than Black jurors, and the "difference between the two groups is statistically significant (p < .001)."¹⁹ Death-qualified White men, in particular, were disproportionately likely to disregard mitigating evidence and to advocate for death sentences in cases with Black defendants.²⁰ Conversely, racially diverse capital juries, especially those that included Black jurors, were less likely to engage in racially discriminatory sentencing.²¹

Mock jury trials found similar results. In a mock capital jury study examining 100 small groups who deliberated and rendered mock capital verdicts, Lynch and Haney found that "the higher the proportion of Whites on the jury, the more likely the jury was to favor death." When they examined the groups separately, "depending upon whether they viewed the Black defendant

or the White defendant, [they] found that the proportion of Whites on the jury was a significant predictor of death verdicts in the Black defendant condition only."²³ White men in that study also diverged significantly from others in how they weighed aggravating and mitigating evidence,²⁴ and in their sentencing verdict choices, resulting in disproportionate support for a death sentence if the case involved a Black defendant.²⁵

8. Analysis of jury selection patterns from capital trial transcripts also shows that Black Americans are significantly more likely than White Americans to be excluded from capital juries as a consequence of the death qualification process, especially based upon their death penalty opposition. Aliza Cover examined the record of exclusions from Louisiana capital trials that took place between 2009 and 2013, and found that Black potential jurors were excluded an average of 36.0% percent whereas White potential jurors were excluded an average of 20.0%; "[c]onsequently, black jurors were 1.8 times more likely to be struck under *Witherspoon* than white jurors." A similarly designed study conducted in South Carolina, using capital cases from 1997-2012 that ended in a death sentence, found that Black potential jurors were significantly more likely to be excluded via death qualification than were White potential jurors, as were women compared to men. Both women and Black potential jurors were significantly more likely to be removed due to their opposition to the death penalty. Survey data from multiple

L. Rev. 513, 553, 558 (2014) (a study of 445 jury-eligible citizens from six leading death penalty states, finding that "death qualification leads to more male and White juries"); (also finding that "[W]hite participants were significantly more likely to be death-qualified (83.2%) than non-White participants (64.3%)").

Black citizens from capital juries. A 1983 Maryland public opinion survey found that 34.1% of Black respondents would be disqualified through death qualification, compared to 9.5% of White respondents. A 1989 survey of California adults found that racial minority respondents were overrepresented among those deemed excludable. Two more recent state-wide surveys of jury-eligible adults, one conducted in California in 2009 and one conducted in Florida in 2016, found that Black respondents were significantly more likely to be excluded, relative to all other respondents, due to their death penalty views. Likewise, county surveys of jury-eligible adults in Alameda County, California, and more recently in Solano County, California indicate that jury-eligible Black respondents were significantly more likely to be excluded than were other respondents. In both studies, women were also at higher risk of being excluded than were men.

9. Social science studies demonstrate that racially diverse juries reduce racially discriminatory decision making against Black defendants, including the likelihood of a death verdict. In the non-capital context, psychologist Sam Sommers experimentally examined the decision-making processes of twenty-nine six-person mock juries who considered a criminal case involving a Black defendant. Half of the six-person groups were diverse (each made up of two Black jurors and four White jurors), and the other half were composed of White jurors only. The diverse groups deliberated longer, discussed more case facts, and members of these groups

³³ Lynch & Haney, *Death Qualification in Black and White, supra* note 16 at 158-159.

were less likely to assert inaccurate facts or information compared to the all-White groups. Additionally, White participants assigned to diverse juries were less likely to view the defendant as guilty prior to deliberations compared to those assigned to the homogeneous juries.³⁴ A study replicating and extending this work (adding a White defendant condition) generally confirmed those findings, in that participants on the all-White juries engaged in lower-quality deliberations (e.g., discussed fewer case facts) when considering a Black defendant, relative to their performance in the White defendant condition. Performance disparities by defendant race were not observed among participants in the diverse jury groups. 35 Analyses of case data from actual jury trials also indicate that White-dominated juries tend to be more conviction-prone and punitive against non-White defendants compared to more diverse juries.³⁶ In the capital case context, data from the Capital Jury Project indicate that the demographic make-up of juries plays a role in racial disparities in outcomes. Specifically, a "white male dominance" effect was demonstrated, wherein capital juries with five or more White men were dramatically more likely to impose a death sentence on Black defendants who kill White victims, in comparison to similar cases without such a concentration of White men as jurors.³⁷ The researchers also identified a "black male presence" effect, whereby having at least one Black man on the jury significantly

Crime & Just. 149, 164 (2008) (finding in an analysis of felony trial outcomes that "juries with a higher percentage of Whites serving on them were more likely to convict black defendants," after controlling for legally relevant case factors); *see* also Shamena Anwar, Patrick Bayer, & Randi Hjalmarsson, *The Impact of Jury Race in Criminal Trials*. 127 The Q. J. of Econ. 1017 (2012), (examining 731 non-capital criminal trial outcomes in two Florida counties, and finding that conviction rates for Black and White defendants did not differ from each other among juries when there were Black potential jurors in the jury pool, but Black defendants were convicted at a higher rate when no Black citizens were in the pool).

³⁷ Bowers, Steiner, & Sandys, *supra* note 18 at 193, finding that "[t]he presence of five or more white male jurors dramatically increased the likelihood of a death sentence").

reduced the likelihood of a death sentence in Black defendant-White victim cases.³⁸ Support for the White-male dominance effect was also obtained in an experimental examination of race and capital sentencing, such that jury groups composed of 33% or more White men were significantly more likely to select a death verdict in the Black defendant case, compared to the otherwise identical White defendant case. In contrast, the groups that were not dominated by White men did not differentiate their sentence determination by race of defendant.³⁹

The Present Study of Wyandotte County, Kansas

- 10. The Wyandotte County Study, which is directly informed by the methodology of my prior studies, aimed to evaluate the death penalty attitudes, likelihood of exclusion from serving on a capital jury because of death penalty views, and views on aggravating and mitigating evidence, for a sample of jury-eligible adults who reside in Wyandotte County, Kansas. In light of these goals and the relevant literature cited above, the following research design was formulated and implemented:
- 11. A screening instrument and main survey were drafted. The screening interview instrument introduced the study's purpose, then asked a series of questions to ensure potential respondents were eligible to serve on a jury in Wyandotte County, Kansas (see attached document, labeled Appendix B). The main survey questions were administered to those respondents who were qualified as eligible based on the screening. The main survey opened with 2 attitude questions about the criminal justice system, followed by a death penalty attitude measure that assessed the respondents' overall level of support for, or opposition to, capital

³⁸ *Id.* (finding that "[i]n the absence of black male jurors, death sentences were imposed in 71.9% of the cases, as compared to 42.9% when one black male was on the jury").

³⁹ Lynch & Haney, *Mapping the Racial Bias of the White Male Capital Juror, supra* note 22 at 84-85, (finding that "the juries with a high concentration of white men were much more death-prone toward black defendants than were juries with a low concentration of white men, or ones that [involved] the white defendant [;] . . . fully 86 percent of those heavily white male juries in the black defendant condition favored death verdicts." Only 63% of the heavily white male juries supported death for the white defendant).

punishment (see attached document, labeled Appendix C). Respondents were then informed about the legal requirements for seating capital juries in Kansas, as well as the basic procedures. A series of questions designed to assess respondents' potential for disqualification based on capital punishment views was asked next. The death qualification questions used in this survey instrument were designed to conform to the Witherspoon, Witt, and Morgan standards and are virtually identical to those used and validated in survey and interview-based research over several decades.⁴⁰ Depending upon the valence of their death penalty attitude (i.e., whether they had said they were opposed to or supported capital punishment), respondents were asked the corresponding set of three follow up questions: (1) do you [favor/oppose] the death penalty so much so that you could not be fair? (2) do you [favor/oppose] the death penalty so much that you feel your attitude might interfere or impair your ability to act fairly? And (3) do you [favor/oppose] the death penalty so much that you would [always/never] actually vote to impose the death penalty, no matter what the evidence showed? ⁴¹ A "yes" answer to any one or more of these three questions identified respondents as excludable from consideration for capital jury service and they were categorized as such for the purposes of this study.

Respondents then answered a series of questions designed to address the way that they understood and evaluated 17 potentially aggravating and mitigating factors. The survey concluded with a series of demographic items, including items asking respondents about their educational attainment, age, racial identity, gender identity, and religion.

 41 The exact language of the questions is set out on pages 3-4 of Appendix C, the Survey Questionnaire.

- 12. A public opinion research firm, Qlarity Access, was hired to obtain the sample of 500 jury-eligible adults in Wyandotte County and conduct the telephone survey. Qlarity uses state-of-the-art telephone survey technology to collect data, including the use of webCATI (Computer Assisted Telephone Interviewing) to conduct the survey. Given the proliferation of cell phones as the primary or sole household telephone, 42 we requested that approximately 80% surveys be completed on cell phones and 20% on household landlines to ensure we reached the full representation of residents in Wyandotte County. Data collection took place from August 7, 2024 to October 14, 2024.
- 13. The completed data were supplied to me by Qlarity in an SPSS file. I then computed research variables necessary to conduct the analyses. First, I created a dichotomous death penalty attitude variable (**DP_att_dichot**) that collapsed support and opposition from four categories to two; those who refused to respond, or did not know, are treated as missing. I created a new race/ethnicity variable (**Racerecode**) to reflect the combined responses for the two questions, Question 7 ("What is your racial or ethnic background?") and the follow up question for anyone who gave two or more responses, Question 7A ("Which ONE of these groups would you say BEST represents your race or ethnicity?"). In that new race/ethnicity variable (**Racerecode**), I also recoded if the specified response to a choice of "Other" fit into one of the

Services, Centers for Disease Control and Prevention, National Center for Health Statistics (June, 2024).

https://www.cdc.gov/nchs/data/nhis/earlyrelease/wireless202406.pdf

⁴² By the last half of 2016, 50.8% of Americans lived in cell-phone only households, 39.4% lived in households with both cell phone and landlines, 6.5% lived in households with only a landline, and 3.2% had no access to a phone. Racial minorities, younger adults, and the poor were all disproportionately likely to live in cell-phone only households. Stephen J. Blumberg, Ph.D., & Julian V. Luke, *Wireless Substitution: Early release of Estimates from the National Health Interview Study, July-December 2016*, U.S. Department of Health and Human Services, Centers for Disease Control and Prevention, National Center for Health Statistics (May, 2017). https://www.cdc.gov/nchs/data/nhis/earlyrelease/wireless201705.pdf. By the last half of December 2023, 76% of adults lived in cell-phone only households, 22.2% lived in households with both cell phones and a landline, and 1.3% lived in landline-only households. Only .5% had no access to a phone. People over 65 were least likely to be cell-phone only (54.6%). Stephen J. Blumberg, Ph.D., & Julian V. Luke, *Wireless Substitution: Early release of Estimates from the National Health Interview Study, July-December 2023*, U.S. Department of Health and Human

enumerated categories in the survey, using the definitions used by the U.S. Census Bureau to categorize race/ethnicity in my recoding. This resulted in an increase of 4 respondents in the "Black" category, 2 respondents in the "White" category, 2 respondents in the "Hispanic/Latino" category, 1 respondent in the "American Indian" category, and 1 respondent in the "Asian" category. I created a variable (**Disqualified**) that captured whether a respondent was excludable, based upon the responses to the death qualification questions. A "yes" answer to any one or more of these three questions identified respondents as excludable from consideration for capital jury service and they were categorized as such. I then created a variable (**Disqual_reason**) that indicated the attitudinal valence of the excludable respondent (support or opposition to the death penalty). I also created two dichotomous demographic variables. The first coded whether the respondent identified as Black (**Black**), with those identifying as Black coded as "1," those identifying as any other racial group coded as "0," and excluding those who refused to respond to the race question. The second coded if the respondent identified as either a White man or a Black woman (**BW_WM**), with all others excluded.

14. I analyzed the data in the SPSS statistical program, using the Chi-square test to examine whether observed differences in proportions between the groups of interest were statistically significant. I then summarized and interpreted the results in light of the extant scientific literature and claims raised by Mr. Fielder. Those results are presented in the next section. In regard to some of the analyses presented in this declaration, it is important to note that because the number of respondents in some sub-groups are quite small, there is not sufficient statistical power to assess whether observed differences are statistically significant. Specifically,

-

⁴³ United States Census Bureau, *What Updates to OMB's Race/Ethnicity Standards Mean for the Census Bureau* (April 8, 2024), https://www.census.gov/newsroom/blogs/random-samplings/2024/04/updates-race-ethnicity-standards.html

when statistical power is low due to a small number of a given group in the population (and therefore a small number in a given sample), there is no expectation of detecting significance because the test would not be able to uncover that relationship even if it exists.⁴⁴ Statistical power refers to the ability to which a given statistical analysis will be able to detect an existing effect, *i.e.*, to allow for the rejection of the null hypothesis at a standard level of significance such as p < .05.⁴⁵ Thus, statistical power is a function of the "effect size"—the estimated size of a difference between two groups within the population under study, the "N"—the sample size of each group of respondents or participants in the study—and the significance level set for testing the hypothesis.⁴⁶ Effect sizes are typically classified as small, medium or large. The larger the expected effect size, the smaller the N needed in the groups. Similarly, the larger the p-value used (i.e., .1 vs. .05 or .01), the smaller the N needed.⁴⁷

To have an 80% chance of uncovering an effect for differences between two independent groups of the same size at the p < .05 level (for example, men vs. women x death penalty support or opposition), the survey would need a minimum of 392 respondents in each group for a small expected effect size; 63 in each group for a medium effect size; and 25 in each group for a large effect size. To the extent that the independent groups are unequal in size, as is generally the case when comparing racial groups on a given phenomenon as done in this analysis, the total sample size needs to be larger to account for the smaller group in order to achieve sufficient power. In short, when independent group sizes are small, a nonsignificant p-value cannot establish whether or not the null hypothesis can be rejected since there is not sufficient power

with the N in the study. A significant p-value under these conditions would allow for the rejection of the null hypothesis.

Results of Wyandotte County Study

- 15. The sample for the Wyandotte County Study was composed of slightly more men (51.6%) than women (47.4%), with 2 respondents identifying as nonbinary, and 3 declining to provide their gender identity. The mean age of the respondents was 53 years old. Approximately 55% respondents identified as non-Hispanic White, 25.2% identified as Black/African-American, 8.6% as Hispanic or Latino, 1.4% as Asian or Asian-American, and 2% as American Indian/Native Alaskan/Hawaiian/Pacific Islander. The remaining 8% identified as another race or ethnicity, or declined to state. Both Hispanic/Latinos and Asian Americans were underrepresented relative to their share of the county population. 49 This was likely the result of the citizenship and English language screening criteria for jury eligibility: 17.7% of the county residents are foreign-born and 30.9% of the county's residents speak a language other than English at home. 50
- 16. Among all the respondents, 54.8% expressed strong (24%) or moderate (30.8%) support for the death penalty, while 41.4% expressed strong (23%) or moderate (18.4%) opposition; 3.8% were undecided. A total of 481 respondents expressed either a positive or negative opinion on the death penalty **and** responded to the death qualification questions so that they could be screened for the potential of exclusion. Of those, 218 (45.3%) were excludable by one or more of the death qualification criteria. As is illustrated in Table 1, those who opposed the death penalty were much more likely to be excludable than were those expressing support for the

https://www.census.gov/quickfacts/fact/table/wyandottecountykansas/AFN120217.

⁴⁹ Ouick Facts, Wyandotte County, Kansas,

death penalty. This difference in rates of exclusion by death penalty attitude is very highly statistically significant, as indicated by the Chi-square test.

Table 1: Death Qualification and Death Penalty Support

	Excludable % (N)	Not Excludable % (N)
Support	33.9% (93)	66.1% (181)
Oppose	60.4% (125)	39.6% (82)

N=481. Chi-square = 33.28, p < .001 (highly significant).

Differences By Race

17. Table 2 illustrates death penalty opinion by respondents' racial identity, excluding those who were undecided on the death penalty or declined to respond to one or both items. An examination of whether Black respondents were significantly less supportive than White respondents is presented in Table 2a. As indicated by that Table, and consistent with prior research described in Paragraph 6 of this report, Black and White respondents significantly and substantially differed in their opinions of the death penalty.⁵¹

15

 $^{^{51}}$ Black respondents also were significantly more likely to oppose capital punishment when compared to all other respondents. N =457, Chi-Square = 15.92, p < .001 (highly significant).

Table 2: Race/Ethnicity and Death Penalty Opinion

	White %	Black %	Hispanic %	Other % ⁵²
	(N)	(N)	(N)	(N)
Support	63.8%	41.3%	60.0%	57.1%
	(171)	(50)	(24)	(16)
Oppose	36.2%	58.7%	40.0%	42.9%
	(97)	(71)	(16)	(12)

Total N = 457. Limited to those who expressed support for or opposition to the death penalty and who identified their racial identity.

Table 2a: Death Penalty Support, White v. Black Respondents

	Support %	Oppose %
	(N)	(N)
White	63.8%	36.2%
	(171)	(97)
Black	41.3%	58.7%
	(50)	(71)

N = 389. Chi-Square = 17.18, p < .001 (highly significant).

18. Overall, Black respondents (45.5%) were just slightly (but nonsignificantly) more likely to be excludable overall, relative to White respondents (42.5%). Black respondents were more likely than White respondents to be excludable due to their opposition to the death penalty (67.3 vs. 53.5%). This finding is was marginally significant (Chi-square = 2.89; p = .089).⁵³ Regarding exclusions under the *Witherspoon* and *Morgan* standards (i.e., the respondents expressed that they would either *never* or *always* impose a death sentence on someone convicted of first degree murder), Black respondents were just slightly (and nonsignificantly) more likely

 $^{^{52}}$ Includes those who identified as Asian (N=7); those who identified as American Indian / Native Alaskan or Hawaiian / Pacific Islander (N=10); and those in the Other category (N=12).

⁵³ Given the small number of Black respondents in the "reasons for exclusion" tests (37 for opposition and 18 for support), obtaining a significant Chi-square would not be expected unless the effect size was very large, as explained in Paragraph 14 of this report.

to be excluded (26.4%) than White respondents (25.7%). Of those excludable, Black respondents were significantly more likely to be excluded because they would never impose the death penalty and less likely to be excluded because they would always impose the death penalty. (see Table 3).

Table 3: Reason for Witherspoon/Morgan Exclusion, White v. Black Respondents

	Excludable	Excludable
	Support % (N)	Oppose % (N)
White	37.7%	62.3%
	(26)	(43)
Black	15.6%	84.4%
	(5)	(27)

N = 101. Chi-square = 5.00, p = .02 (significant).

19. Black and White respondents differed in the relative weight they assign to mitigating and aggravating factors. As Table 4 shows, a much larger percentage of Black respondents than White respondents would weigh mitigating factors in favor of a life verdict, which is the statutorily and judicially intended direction of such evidence. White respondents were far more likely to inappropriately weigh mitigating factors in favor of a death sentence. Conversely, a much smaller percentage of the Black respondents would inappropriately weigh the defendant-related mitigation in favor of death. These differences were statistically significant for 5 of the 10 mitigating factors, and marginally significant for an additional one. Black and White respondents also differed in how they would weigh aggravating factors, as indicated in Table 5, with Black respondents significantly less likely to weigh the factor toward death in assessing all 7 of the aggravating factors.

Differences by Gender

20. As Table 6 shows, women were significantly less supportive of the death penalty than men. While women were not significantly more likely to be excludable than men for one or more responses to the death qualification questions (as illustrated in Table 6a), of those excludable, women were much more likely than men to be excluded on the basis of their death penalty opposition, as illustrated in Table 6b. That difference is highly significant. While women were just slightly (and nonsignificantly) more likely to be excludable than men on the *Witherspoon* and *Morgan* standards (27.4% vs. 25.6%), they were significantly more likely to be excludable for never being willing to impose the death penalty (see Table 6c).

21. Men and women also differed in the relative weight they assign to mitigating and aggravating factors. As Table 7 shows, a much larger percentage of women compared to men would weigh mitigating factors in favor of a life verdict. Men were also much more likely to inappropriately weigh mitigating factors in favor of a death sentence. These differences were statistically significant for 8 of the 10 mitigating factors, and marginally significant for an additional one. Men and women also differed in how they would weigh aggravating factors, as indicated in Table 8, with women significantly less likely to weigh the factor toward death in assessing 6 of the 7 of the aggravating factors, with the seventh being marginally significant.

Race and Gender Combined

22. The difference in attitudes about the death penalty is even larger when just comparing White men to Black women. There was nearly a mirror image among those who expressed support of, or opposition to the death penalty, and those who either identified themselves as White men or Black women, as illustrated in Table 9. This difference was very highly significant, which is especially notable given the small number of Black women (70) in the analysis. Black women were only slightly more likely to be excludable, as illustrated in Table 9a, but Black women were overwhelmingly likely to be excluded for opposition to the death penalty, relative to White men, as illustrated in Table 9b. Approximately 28.6% of Black women and 24% of White men were excludable via the *Witherspoon* and *Morgan* standards, and Black

^{* =} p < .05

^{** =} p < .01

^{*** =} p < .001

women were significantly more likely to be excludable for never being willing to impose the death penalty relative to White men (see Tables 9c and d), a difference that was statistically significant despite the low statistical power (see Paragraph 14).

Table 9: Death Penalty Support, Black Women v. White Men

24. Death qualification significantly changed the percent of persons in the jury pool who said they were in favor of the death penalty, increasing the number from 57% of the overall jury pool to 68.8%. This is illustrated in Table 12, which includes all respondents who expressed support or opposition, and those who responded to the death qualification questions. Those who were opposed to the death penalty were overwhelmingly excluded, relative to those who support the death penalty—60.4% of those opposed to the death penalty were excluded versus only 33.9% of those who support the death penalty. As noted in Table 1 (Paragraph 16), the test of independence between direction of attitude and death qualification status was highly significant (p < .001).

25. Based on the results of the Wyandotte County Study, as reported herein (Paragraphs 15-24), it appears that in Wyandotte County, Kansas, Black and White jury-eligible citizens hold significantly different views of the death penalty, and that death qualification has the potential to disproportionately exclude Black jury-eligible citizens and women for their opposition to the death penalty, especially impacting Black women. The results also indicate that the death qualification process will result in a jury pool that is significantly and substantially more supportive of the death penalty than is the broader jury-eligible population in the county. The pattern of results is consistent with previous research on death penalty attitudes and death qualification. Moreover, as a substantial body of research has demonstrated, some of which is highlighted in Paragraphs 7 and 9 of this report, this poses a significant risk to a fair trial, including at the penalty phase, especially for Black capital defendants.

 Project title: "Life v. Death: A history of capital punishment in America." Towards scripting and pre-production of a one hour video documentary which explores the role of the death penalty in American society and culture. (\$3000, PI).

HONORS, AWARDS & VISITING POSITIONS

2024	Paul Tappan Award for outstanding contributions to Criminology, Western Society of Criminology.
2024	Rockefeller Foundation Bellagio Center Residency, Lake Como, Italy.
2023	Visiting Researcher, Russell Sage Foundation.
2022	Visiting Researcher, Trinity College, Dublin, School of Law.
2020	Chancellor's Professor, University of California, Irvine.
2017	W.E.B. Du Bois Scholar, National Institute of Justice.
2017	Michael J. Hindelang Award for best book in Criminology (for <i>Hard Bargains</i>), American Society of Criminology.
2016	Stanton Wheeler Mentorship Award, Law and Society Association.
2015-2018	Chancellor's Fellow, University of California, Irvine.
2014-2015	Visiting Scholar, Russell Sage Foundation.
2010	PASS Award for Literature (for <i>Sunbelt Justice</i>), National Council on Crime and Delinquency.
2007-2020	Fellow, Institute for Legal Research, Criminal Justice Studies Program, University of California, Berkeley School of Law.
2004-2005	Visiting Scholar, Center for the Study of Law and Society, University of California, Berkeley.
2002	Outstanding Scholar Award, College of Applied Sciences and Arts, San Jose State University.
2000	Institute for Social Responsibility, Ethics, and Education Annual Lecture, San Jose State University, Inaugural Lecture honoree (\$500 prize).
1998	New Investigator Award, National Science Foundation.
1997	Dissertation Fellowship; University of California, Santa Cruz.
1995	Outstanding Teaching Assistant Award; University of California, Santa Cruz.
1994	Qualifying examination; passed with Distinction.
1993-1994	National Science Foundation Graduate Fellowship Program; Honorable Mention.
1992-1993	Regent's Fellow; University of California, Santa Cruz.
1982-1983	University Fellow; Stanford University.

SELECTED CONFERENCE PAPERS & INVITED SCHOLARLY PRESENTATIONS

- 2024 Seminar talk: Psychology and criminal law. UCLA Law School (Prof. Shirin Bakhshay's seminar, March).
- 2023 Seminar talk: Federal drug crime prosecutions. Harvard Law School (Prof. Nancy Gertner's seminar, February).

- 2024 Keynote speaker: (Re-)centering law in the criminology of sentencing & punishment. Western Society of Criminology annual meeting, Long Beach, CA (February).
- Invited lecture: The emergence of Justice Studies at San Jose State. 20th Anniversary Celebration, Justice Studies, San Jose State University (October).
- 2023 Prosecutors as punishers: A case study of Trump-era practices, Law & Society Association meeting, San Juan, Puerto Rico (June).
- Book panel commentator: *Prisons of Debt* by Lynne Haney, Law & Society Association meeting, San Juan, Puerto Rico (June).
- Invited workshop talk: Prosecutors as punishers: A case study of Trump-era practices. Crime, Law & Punishment Workshop, NYU Sociology (March).
- 2023 Police testimony, jury diversity, & decision-making: Insights from mock jury deliberations. Symposium talk, American Psychology-Law Society annual meeting, Philadelphia (March).
- 2023 Seminar talk: The conspiracy of drug weight (in federal sentencing). Harvard Law School (Prof. Nancy Gertner's seminar, February).
- Invited talk: Arizona and the transformation of American punishment. National Forensic Mental Hospital, Academic Series, Dublin (November).
- 2022 Invited talk: Prosecutors as punishers: A case study of Trump-era practices. Queens College Belfast, School of Law (October).
- Invited talk: Prosecutors as punishers: A case study of Trump-era practices. Trinity College Dublin, School of Law (October).
- 2022 Book panel commentator: *Punishing Welfare* by Spencer Headworth, Law & Society Association meeting, Lisbon, Portugal (July).
- 2022 Symposium talk: Execution volunteers and the state of state punishment. University of Texas, School of Law (April).
- 2022 Seminar talk: The conspiracy of drug weight (in federal sentencing). Harvard Law School (Prof. Nancy Gertner's seminar; March).
- 2021 Symposium/webinar presentation: *Booker* and beyond: Analyzing sentencing reform and exploring new research directions. National Institute of Justice (December).
- Seminar talk: Drug prosecutions and policy change in the federal system. Columbia Law School (Jeffrey Fagan's seminar, October).
- 2021 Symposium talk: The conspiracy of drug weight (in federal sentencing). Moritz School of Law, Ohio State University (October).
- 2021 Commentator: Matthew Clair's *Privilege & Punishment*. Ethnographic Café (September).
- 2021 Commentator: Matthew Clair's *Privilege & Punishment*. Department of Justice Studies, San Jose State University.
- 2020 Invited talk: Turning back the clock: Punitive prosecutorial practices in the Trump era. Centre for Criminological Research, University of Alberta.
- 2020 Symposium talk: Federal prosecutors as regressive opposition? UC Hastings Law School.

- 2019 Symposium talk: Double duty: The competing roles of special circumstances in California's capital punishment system. Columbia Law School.
- 2019 Reckless-Dinitz Lecture: Place, race, and variations in federal criminal justice Practices, Criminal Justice Research Center, Ohio State University.
- 2019 Hoffinger Lecture: Localizing legal policy: The case of federal criminal justice, NYU School of Law.
- 2019 Participant, Prison & Policy Law Roundtable (2-day workshop for prison law scholars), UCLA School of Law.
- 2018 Book panel commentator: *Building the Prison State* by Heather Schoenfeld, American Society of Criminology meeting, Atlanta, GA.
- 2018 Invited presentation: The production of inequality in the federal system. Workshop on "The Criminal Justice System and Social Exclusion: Race, Ethnicity, and Gender," National Academies of Science, Washington D.C.
- 2018 Symposium talk: 94 different countries? Time, place, and variations in federal criminal justice. UC Berkeley School of Law, Symposium in honor of Franklin Zimring.
- 2017 Invited talk: Boundary crossings in criminalizing immigration, Prosecuting Immigration/Justice Strategies convening and meeting, Tucson, AZ.
- 2017 Book panel commentator: *Big House on the Prairie* by John Eason, American Society of Criminology meeting, Philadelphia, PA.
- 2017 Book panel commentator: Addicted to Rehab: Race, Gender and Drugs in the Era of mass Incarceration by Allison McKim, American Society of Criminology meeting, Philadelphia, PA.
- 2017 Author on book panel for *Hard Bargains: The Coercive Power of Drug Laws in Federal Court,* American Society of Criminology meeting, Philadelphia, PA.
- 2017 Book talk: *Hard Bargains: The Coercive Power of Drug Laws in Federal Court.*Northeastern University, School of Criminology and Criminal Justice.
- 2017 Book talk: *Hard Bargains: The Coercive Power of Drug Laws in Federal Court.* Harvard Law School.
- 2017 Book talk: *Hard Bargains: The Coercive Power of Drug Laws in Federal Court.* Center for the Study of Law and Society, UC Berkeley School of Law.

Appendix B

Wyandotte County, Kansas OPINION SURVEY -- Screening Interview –

NOTE	: Cell or Land line (FROM SAMPLE)	
public anythin	this is calling from Qlarity Access, a public opinion research company. We're doing a opinion survey to find out people's attitudes about the criminal justice system. We are not selling and this is not a political poll. (Your cooperation is very important because your household lected at random as being representative of Wyandotte County.)	
of this	SPONDENT HESITATES TO COOPERATE, SAY: If you like, you can verify the authenticity survey by calling Lois Heaney at the National Jury Project during regular office hours. Call to 510-338-4728.)	
A.	Are you speaking on a land line or cell phone?	
1 Land 2 Cell		
1. For this survey, we need to speak with people who are eligible to serve on juries in Wyandot County, Kansas. That means someone who is a U.S. citizen, who is at least 18 years old and either is registered to vote in Wyandotte County or who has a Kansas driver's license or a statissued I.D. card with an address in Wyandotte County, and is able to speak and understand English.		
	[If Landline:] Based on that, do you meet the qualifications to serve on a jury in Wyandotte County?	
	YESASK Q.6	
	NOASK Q.2

9. Is there some	one else at this residence who is a U.S. citizen, who is at least 18 years old and
who either is register	red to vote in Wyandotte County or who has a Kansas driver's license or a state-
issued I.D. card with	an address in Wyandotte County, is able to speak and understand English, and
who has not been co	nvicted of a felony in the last 10 years?
VEC	Go to 0.4 and subsequent rescreening questions

YES	. Go to Q.4 and subsequent resci	reening questions
NO	. HOUSEHOLD INELIGIBLE.	TERMINATE.
REFUSED	.TERMINATE.	

Appendix C

NJP 3609	
Time started:	

Wyandotte County, Kansas Jury Pool

MAIN QUESTIONNAIRE

Before I begin asking you questions, I'd like you to know that there are no right or wrong answers and that you are free to respond with a "don't know" answer to any question. All of your answers will remain confidential.

1. I'd like to read you a few statements about the criminal justice system. For each statement I read, please tell me whether you <u>agree strongly</u> with it, <u>agree somewhat</u>, <u>disagree somewhat</u>, or <u>disagree strongly</u>. Here's the first one...

	ASI	K IN ROTATED ORDER. (ST	'ART WITH X'd (OUESTION)			(DO NOT	READ)
	7101	THE HOLLING	AGREE STRONGLY	AGREE SOMEWHAT	DISAGREE SOMEWHAT	DISAGREE STRONGLY	DON'T KNOW	REFUSED /NA
[]	a)	Regardless of what the law says, a defendant in a criminal trial should be required to prove his or her innocence	1	2	3	4	8	9
[]	b)	Even the worst criminal sl be considered for mercy		2	3	4	8	9

(Split Sample 2a/2b)

- 2a. Now, I want to ask you some questions about the death penalty. In general, would you say that you are strongly in favor, somewhat in favor, somewhat opposed, or strongly opposed to the death penalty?
 - 4 STRONGLY IN FAVOR
 - 3 SOMEWHAT IN FAVOR
 - 2 SOMEWHAT OPPOSED
 - 1 STRONGLY OPPOSED
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)

Rotate with:

- 2b. Now, I want to ask you some questions about the death penalty. In general, would you say that you are strongly opposed, somewhat opposed, somewhat in favor, or strongly in favor of the death penalty?
 - 1 STRONGLY OPPOSED
 - 2 SOMEWHAT OPPOSED
 - 3 SOMEWHAT IN FAVOR
 - 4 STRONGLY IN FAVOR
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)
- 3. Now I'd like you to assume that you've been called as a possible juror in a premeditated first-degree murder trial. The prosecutor will be seeking the death penalty if the defendant is convicted. Since this is a case where the death penalty may be imposed, the judge will ask you certain questions about your attitudes toward the death penalty before deciding whether you should be chosen to serve on the jury.

The judge will explain that there may be two parts to any trial where the death penalty is a possible sentence. The first part, the guilt trial, is just like any other criminal trial where the jury decides whether the defendant is guilty or not guilty. If the defendant is found guilty of premeditated first-degree murder, in certain cases there is a second, separate part to the trial – called the penalty trial. In the penalty trial the jury decides whether the defendant should get the death penalty or life in prison without possibility of parole.

If Q 2 Penalty = 8 or 9 Skip to Q. 4

But, as I said, before EITHER PART of the trial begins, the judge will ask you some specific questions about your attitude towards the death penalty. Imagine that you are a juror in that situation. How would you answer these questions from the judge?

Programming:

If Q 2 Penalty = 1 or 2 Go to Q. 3A-C oppose

If Q 2 Penalty = 3 or 4 Go to Q. 3D-F favor

Track those opposed at 2a or 2b (answer = 1 or 2) ask:

Q. 3 OPPOSE DP (Q. 2 Penalty = 1 or 2)

- A. Do you OPPOSE the death penalty so much that you could not be fair in deciding whether a defendant is guilty or not guilty? That is, you would NEVER vote to CONVICT any defendant in the guilt trial no matter what the evidence showed, in a case where the death penalty was a possible sentence?
 - 1 YES (NEVER VOTE TO CONVICT)
 - 2 NO
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)
- B. In a case where a defendant was convicted of premeditated first-degree murder for which the death penalty was a possible punishment, do you OPPOSE the death penalty so much that you feel your attitude might interfere with or impair your ability to act fairly in the PENALTY trial that is, actually deciding that the defendant should get the death penalty instead of life in prison without parole?
 - 1 YES (IMPAIR ABILITY TO ACT FAIRLY AT PENALTY TRIAL)
 - 2 NO
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)
- C. Do you OPPOSE the death penalty so much that you would NEVER actually vote to impose THE DEATH PENALTY in ANY case in which the defendant has been convicted of premeditated first-degree murder and is eligible to receive the death penalty, no matter what the evidence showed?
 - 1 YES (NEVER VOTE FOR THE DEATH PENALTY IN AN ELIGIBLE MURDER CASE)
 - 2 NC
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)

Track those who favor at 2a or 2b (answer = 3 or 4) ask:

Q. 3 FAVOR DP (Q. 2 Penalty = 3 or 4)

- D. Do you FAVOR the death penalty so much that you could not be fair in deciding whether a defendant is guilty or not guilty? That is, you would ALWAYS vote to CONVICT any defendant in the guilt trial no matter what the evidence showed, in a case where the death penalty was a possible sentence?
 - 1 YES (ALWAYS CONVICT)
 - 2 NO
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)
- E. In a case where a defendant was convicted of premeditated first-degree murder for which the death penalty was a possible punishment, do you FAVOR the death penalty so much that you feel your attitude might interfere with or impair your ability to act fairly in the PENALTY trial that is, actually deciding that the defendant should get life in prison without parole instead of the death penalty?
 - 1 YES (IMPAIR ABILITY TO ACT FAIRLY AT PENALTY TRIAL)

- 2 NO
- 8 DON'T KNOW/NOT SURE (Do not read)
- 9 NA/REFUSED (Do not read)
- F. Do you FAVOR the death penalty so much that you would ALWAYS actually vote to impose it in EVERY case in which the defendant has been convicted of premeditated first-degree murder and is eligible to receive the death penalty, no matter what the evidence showed?
 - 1 YES (ALWAYS VOTE FOR THE DEATH PENALTY IN AN ELIGIBLE MURDER CASE)
 - 2 NO
 - 8 DON'T KNOW/NOT SURE (Do not read)
 - 9 NA/REFUSED (Do not read)
- 4. Just for a moment, I would like you to imagine that you are a member of a jury that has found a person accused of premeditated first-degree murder guilty beyond a reasonable doubt. In other words, the jury had convicted the person and found him or her guilty.

As I mentioned earlier, in premeditated first-degree murder cases in Kansas, where the prosecutor is asking for the death penalty, there is a second part to the trial in which the jury would determine whether or not the person would <u>actually</u> receive the death penalty or life in prison without parole.

If you were on the jury, tell me for each one of the following factors whether it would make you (ROTATE) [more likely to vote for the death penalty], [more likely to vote for life in prison], or would not affect your decision at all.

PROGRAM: RANDOMIZE items A-Q

ROTATE DP/LWOP OPTION - SPLIT SAMPLE

A. If the victim of the murder was a police officer.

IF NEEDED: Would you be:

- 1 MORE LIKELY TO VOTE FOR DEATH PENALTY
- 2 MORE LIKELY TO VOTE FOR LIFE IN PRISON WITHOUT POSSIBILITY OF PAROLE
- 3 WOULD NOT AFFECT MY DECISION
- 8 DON'T KNOW/NOT SURE (do not read)
- 9 NA/REFUSED (do not read)
- B. The murder was especially heinous, atrocious or cruel.
- C. Two or more victims were murdered in the crime.
- D. The convicted person came from a background of hardship and poverty.
- E. Although you were a member of the jury that convicted the defendant, you still had some lingering doubt about whether he was actually guilty of the crime.
- F. The convicted person has a record of prior crimes that involved great bodily harm to another person.
- G. The convicted person committed the murder in order to avoid arrest.
- H. The convicted person was raised by family members with a history of drug abuse.
- I. The convicted person committed the murder for the purpose of receiving money.
- J. The convicted person committed the murder while experiencing extreme mental disturbance.

	M.	A term of imprisonment is sufficient to defend and protect the people's safety from the convicted person.
	N.	The convicted person attended underfunded and low performing neighborhood schools.
	0.	The convicted person grew up in a neighborhood where residents were fearful of the police.
	P.	The convicted person grew up in a neighborhood with high rates of violence and gangs.
	Q.	The convicted person has a child and a loving family.
	SOCIO-DEM	OGRAPHIC SERIES
		ike to ask you some background questions that will help us analyze the results of this survey. All of rs will remain confidential.
5.	Could you p	lease tell me how old you are?
		REFUSED999
6.	Are you reg	istered to vote?
		YES
7.		r racial or ethnic background? Are you White, Black, Latino/Latina, Asian, American Indian or Alaskan ve Hawaiian or Pacific Islander, or some other race or ethnicity? Please tell me all that apply. WHITE1 BLACK
		HISPANIC/LATINX
		OTHER
		ASK only if Respondent identifies two or more in Q. 7) Which ONE of these groups would you say BEST your race or ethnicity(ONLY SHOW RESPONSES Mentioned by Respondent at Q.7) WHITE
		OTHER
		5

The convicted person suffered sexual abuse from family members during his childhood.

The convicted person committed the murder while in prison for another felony.
