Luwanda, Charles,

I am checking on your availability and interest in participating in a video interview with Healthcare IT News. This is an excellent opportunity to demonstrate leadership in federal AI. Kindly let me know by 5/2 and I'll coordinate.

HIMSS and Healthcare IT News is writing a series of high-profile articles (combined with videos) on Chief AI Officers in healthcare for Healthcare IT News. The reporter is looking to do a profile interview with Mr. Charles Worthington, Chief Technology Officer.

The profile will be like this 4-minute example featuring the CAIO at Cedars-Sinai:
<https://www.healthcareitnews.com/news/cedars-sinai-caio-ai-transforming-relationship-between-caregivers-and-it>

Approving Official:

Outlet: Healthcare IT News

Subject: Profile Story of VA Chief AI Officer Charles Worthington

Received: APR 15

Deadline: MAY 9

Contact Info: (b)(6) @himss.org

Background: The reporter is looking to do a profile interview with Mr. Charles Worthington.

Status: Sent to OIT

Recommendation: Prepare the SME for the interview and provide answers to the questions/talking points for OPIA leadership review/approval.

Q1: How did the VA approach you to become its Chief AI Officer? What were they looking for? And who would you report to?

A1:

Q2: What in your background makes you a good fit to be a Chief AI Officer? And what skills should anyone looking to become a Chief AI Officer have?

A2:

Q3: Please describe the AI part of your job at the VA. In broad terms, what is expected of you, and in more specific terms, what is a typical day for you like

A3:

Q4: Please talk at a high level about where and how the VA is using artificial intelligence.

A4:

Q5: More specifically, please describe and discuss one particular AI project you are proud of that is working well for your organization, and some outcomes you are seeing. How did you oversee this project?

A5:

PART TWO for the bonus material:

Q6: What are a few tips you would offer to other IT executives looking to become a Chief AI Officer for a hospital or health system?

A6:

Q7: What is the best way a Chief AI Officer can work together with his or her peers in the healthcare C-suite to ensure AI gets done right?

A7:

Subject: Profile Story of VA Chief AI Officer Charles Worthington

OIT,

The reporter is writing a series of high-profile articles (combined with videos) for 120,000-member HIMSS and Healthcare IT News on Chief AI Officers in healthcare for Healthcare IT News. He is looking to do a profile interview with Mr. Charles Worthington, Chief Technology Officer. The profile will be like this example featuring the CAIO at Cedars-Sinai:

<https://www.healthcareitnews.com/news/cedars-sinai-caio-ai-transforming-relationship-between-caregivers-and-it>

The interview will be conducted via ZOOM provided by the reporter. Most of the interview will be used for the written story. The second part will be recorded to be used on the website/social media as "bonus content".

Please ensure that Mr. Worthington is camera ready.

****Powerful Camera Tips for Virtual Interviews:****

1. ****Elevate Your Camera**:** Position your laptop on a stand or other surface, ensuring the camera is at or above eye level for a professional look.
2. ****Engage with Eye Contact**:** Practice looking directly at your camera as if you're speaking to someone in the room. This creates a genuine connection with your audience.

3. ****Minimize Distractions****: Turn off email notifications and silence your cell phone to maintain focus and avoid interruptions.
4. ****Create a Professional Environment****: Keep your space tidy and use your actual office as a backdrop. This enhances authenticity and professionalism.
5. ****Optimize Lighting****: Test your lighting to ensure you're well-lit and visible, avoiding shadows or overpowering brightness.
6. ****Secure Your Internet Connection****: Ensure a strong internet connection by limiting other devices during the interview for a smooth experience.

PHOTO NEEDS

A photo is also needed to accompany the article. The photo needs to be HORIZONTAL (LANDSCAPE) and high-resolution. It can be done with any smartphone. It can be formal or casual. It CANNOT be a close-up. ([Click here](#) and [click here](#) for examples.)

Please identify several tentative dates and times within the timeframe that the SME is available.

INTERVIEW TIMES

May 1 between 11-4 Central Time
May 2 between 11-4 Central Time
May 5 between 11-4 Central Time
May 6 between 11-2 Central Time
May 8 between 11-4 Central Time
May 9 between 11-4 Central Time

Prepare the SME for the interview and provide answers to the questions/talking points for OPIA leadership review/approval. A senior advisor-level approver is needed before sending it forward to leadership.

Subject: [EXTERNAL] (b)(6) Profile Story of VA Chief AI Officer Charles Worthington

Hi (b)(6) Thanks for the quick reply and for your help. I'm looking forward to profiling Charles. First below are timeframes for the interview. Please select a 45-minute slot and send it to me ASAP so we can get

things on our calendars and reserve time right away. I will send a Zoom invite to everyone as soon as I get the time from you, so do not bother sending out invites. Second below are the simple photo instructions. And third below are all of my questions. I'm sure they will be very easy for Charles to answer.

INTERVIEW TIMES

May 1 between 11-4 Central Time
May 2 between 11-4 Central Time
May 5 between 11-4 Central Time
May 6 between 11-2 Central Time
May 8 between 11-4 Central Time
May 9 between 11-4 Central Time

PHOTO NEEDS

The special photo needs to be HORIZONTAL (LANDSCAPE) and high-resolution. It can be done with any smartphone. It can be formal or casual. It CANNOT be a close-up. ([Click here](#) and [click here](#) for examples. Please definitely take a look at these exemplary photos and please make sure Charles sees them.)

QUESTIONS

(The interview is in two parts. Part One is for the written story. Part Two is for special bonus content in a video.)

PART ONE

- 1) How did the VA approach you to become its Chief AI Officer? What were they looking for? And who would you report to?
- 2) What in your background makes you a good fit to be a Chief AI Officer? And what skills should anyone looking to become a Chief AI Officer have?
- 3) Please describe the AI part of your job at the VA. In broad terms, what is expected of you, and in more specific terms, what is a typical day for you like?
- 4) Please talk at a high level about where and how the VA is using artificial intelligence.
- 5) More specifically, please describe and discuss one particular AI project you are proud of that is working well for your organization, and some outcomes you are seeing. How did you oversee this project?

PART TWO

- A) What are a few tips you would offer to other IT executives looking to become a Chief AI Officer for a hospital or health system?
- B) What is the best way a Chief AI Officer can work together with his or her peers in the healthcare C-suite to ensure AI gets done right?

Best wishes,

(b)(6)

Subject: Profile Story of VA Chief AI Officer Charles Worthington

Hello (b)(6)

I wanted to let you know that I've got your request and I'm eager to help you out.

I understand that you'd like to set up a date for the interview, hopefully we have some time to work out the details. When do you plan on publishing the article. Normally we ask for at least 10 business days to set an interview like this on a principle's calendar. With the travel season approaching hopefully we can work with that but I also hope you can be flexible in case we need to shift a week or more out.

Additionally, it would be helpful if you could elaborate on the interview and provide any specific questions you would like Mr. Worthington, if available, to address. I also see from the interview you provided that a photo is also used. What are the photo requirements?

Regards,

(b)(6)

Subject: [EXTERNAL] Profile Story of VA Chief AI Officer Charles Worthington

Hello to one and all. I'm writing a series of high-profile articles (combined with videos) for 120,000-member HIMSS and Healthcare IT News on Chief AI Officers in healthcare. I would love to profile the VA's Charles Worthington. Can we work on setting up a date to record an interview with Charles, and discuss the questions in advance? Please let me know ASAP. Thank you, everybody!

Here is one example of a story from the Chief AI Officer series, featuring the CAIO at Cedars-Sinai:
<https://www.healthcareitnews.com/news/cedars-sinai-caio-ai-transforming-relationship-between-caregivers-and-it>

Hi Paul and (b)(6)

We do not need a new from-scratch policy for VA's use of AI in general, because that is well covered by our existing AI risk management framework and governed by OMB's recent M-Memo. VA has hundreds of AI use cases in production and we are adding more to the inventory every day. If folks know of AI use cases planned or in production, encourage the owner to submit the details here: <https://forms.office.com/g/hrtrSJTQjz>

(b)(5)

I am engaged in a conversation with OIS on this topic currently, so if you have any useful contributions to that discussion, please share them.

Charles

We need to also think in product-centric, product-first technology enabling ways for what ship—including this.

This “methodology” or framework will be a product if you want to employ it—if it’s packaged and delivered like a product.

We need more methods and measure OKRs and KPIs against those methods. Lots of areas to decompose to answer your questions below plus the intersection of product... Starting with properly defining what a product is first.

(b)(6)

Office of People Science, People Analytics Directorate

3. Risk Evaluation:

3.1 Examine potential threats related to privacy, security, and algorithmic bias before committing resources.

3.2 Rate the impact and likelihood of each risk and plan mitigations accordingly.

4. Ethical Review:

4.1 Assess the AI system for fairness, explainability, and possible discrimination to uphold public trust.

4.2 Conduct bias audits and embed feedback loops for continuous improvement.

5. Compliance Alignment:

5.1 Ensure adherence to HIPAA, FedRAMP, FISMA, Section 508, and other federal mandates at every stage.

5.2 Apply VA directives and guidance to preserve privacy and security for Veteran data.

6. Procurement:

6.1 Define clear vendor criteria, referencing performance, security credentials, and ethical track records.

6.2 Use best-value evaluation and contract clauses that secure data ownership and governance rights.

7. Data Preparation:

7.1 Obtain accurate and complete datasets while respecting data minimization principles.

7.2 Implement governance measures for data quality, labeling, and version control.

8. Implementation Plan:

8.1 Outline timelines, milestones, and responsibilities from pilot initiation to full rollout.

8.2 Coordinate with IT teams to set up infrastructure, integrations, and necessary security controls.

9. Testing and Validation:

9.1 Execute functional, security, and performance tests to confirm reliability in controlled environments.

9.2 Check for model drift or bias issues and refine configurations as needed.

10. Workforce Training:

10.1 Educate staff on system use, ethical considerations, and limitations of AI outputs.

10.2 Develop ongoing support mechanisms and refresher sessions for continuous learning.

11. Pilot Deployment:

11.1 Launch the AI tool in a contained setting for initial feedback and adjustment.

11.2 Analyze results, address identified gaps, and confirm readiness for broader release.

12. Rollout and Integration:

12.1 Expand deployment in phases to limit disruption and gather incremental feedback.

12.2 Embed AI outputs into existing workflows to encourage adoption and user acceptance.

13. Monitoring and Oversight:

13.1 Track performance metrics, security status, and user feedback through routine audits.

13.2 Facilitate continuous improvement by revisiting risk assessments and updating the system.

14. Communication and Transparency:

14.1 Inform Veterans/the public and stakeholders about AI's function, data usage, and benefits.

14.2 Offer clear channels for questions and feedback to maintain trust and accountability.

15. Long-Term Maintenance:

15.1 Schedule periodic model updates, security patches, and compliance reviews to keep pace with evolving standards.

15.2 Evaluate cost-effectiveness and data reliability, ensuring the AI remains beneficial in the long run.

This appears to be a very useful framework/guide. I believe the areas most directly addressing risk in a practical way are those I have highlighted in **green**. For access to 3rd party AI tools through the VA network, we need a real-time (machine speed) set of governance tools to identify and block (prevent) prohibited use at the time it is happening. The other elements of the framework you suggest are quite important as well (set policies, conduct algorithm audits, maintain an AI inventory [the "AIBOM" as it were for AI embedded in COTS products, call-home features in CITS products, etc...]). Each of these non-automated elements will have their own nuances when dealing with 3rd party (COTS) AI products.

Tnx for developing this framework. Mayb we can continue to build on it. Right?

Tnx again!

Subject: Re: 🐼 Gemini 2.5 tops AI leaderboard

I'm thinking wider and more encompassing, not narrow, from beginning to end.

1. Planning and Scoping:

1.1 Clarify the mission needs, intended outcomes, and success metrics to guide AI adoption.

1.2 Document the specific challenges or inefficiencies to address with the proposed solution.

2. Stakeholder Engagement:

2.1 Consult relevant experts, including leadership, legal, privacy, and user representatives, for a cross-functional perspective.

2.2 Delegate governance roles and responsibilities for transparent oversight.

3. Risk Evaluation:

3.1 Examine potential threats related to privacy, security, and algorithmic bias before committing resources.

3.2 Rate the impact and likelihood of each risk and plan mitigations accordingly.

4. Ethical Review:

4.1 Assess the AI system for fairness, explainability, and possible discrimination to uphold public trust.

4.2 Conduct bias audits and embed feedback loops for continuous improvement.

PLUS: OpenAI drops new native image generation

March 26th, 2025 | [Read Online](#)

[Read Online](#) | [Sign Up](#) | [Advertise](#)

The Rundown AI

Together with  Tely.ai

Good morning, AI enthusiasts. Google is back on top of the AI rankings, thanks to the release of its powerful new Gemini 2.5 Pro model — dominating benchmarks across reasoning, math, science, and coding.
But with AI continuing to evolve at lightning speed and rivals like OpenAI gearing up for their next models, how long will Google hold onto the crown?
P.S. Our next workshop is TODAY at 2 PM EST — join and learn how to build an AI-powered sales rep using Zapier Agents. RSVP [here](#).

In today's AI rundown:

- Google's Gemini 2.5 Pro tops AI leaderboard
- OpenAI adds image generation to GPT-4o, Sora
- Transform concepts into production-ready pitch decks
- Apple's billion-dollar bet on Nvidia AI hardware
- 4 new AI tools & 4 job opportunities

LATEST DEVELOPMENTS

GOOGLE

Google's Gemini 2.5 Pro tops AI leaderboard

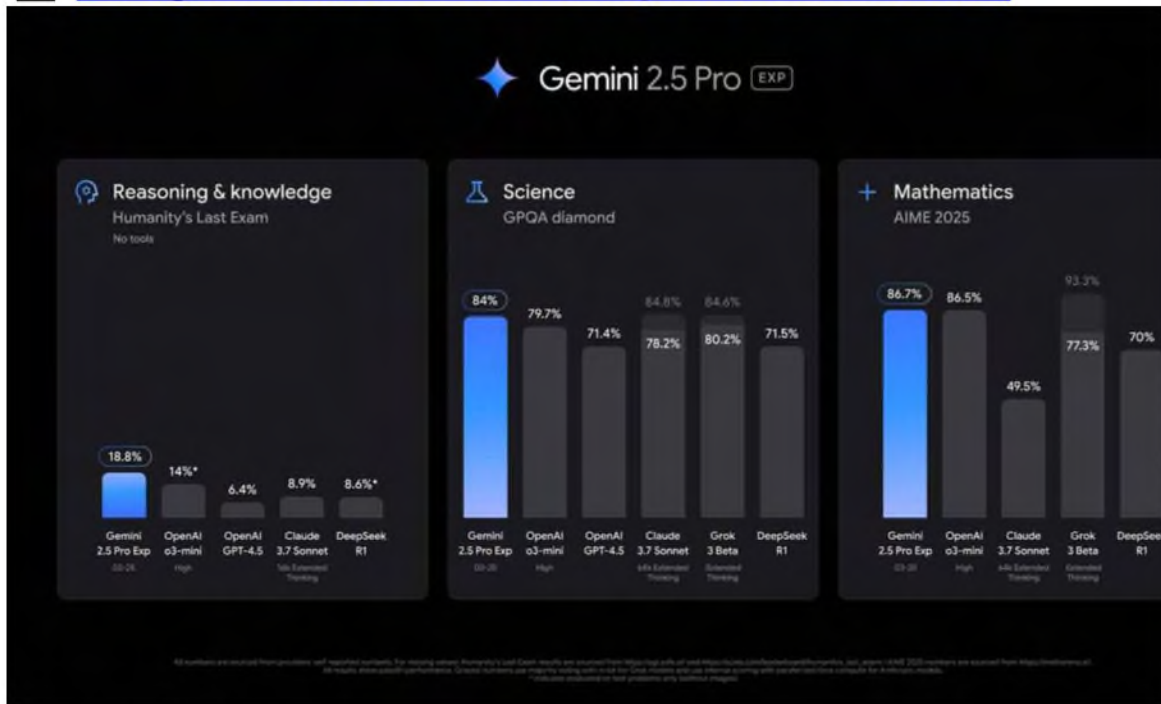

Image source: Google

The Rundown: Google just [announced](#) Gemini 2.5, a new family of AI models with built-in reasoning—starting with the release of Gemini 2.5 Pro Experimental, which tops key benchmarks and represents the company's most intelligent model to date.

The details:

- 2.5 Pro debuts at #1 on the LMArena leaderboard, showcasing advanced, SOTA reasoning capabilities across math, science, and coding tasks.
- On coding, 2.5 Pro scores 63.8% on SWE-Bench Verified and 68.6% on Aider Polyglot — with specific strengths in web apps and agentic code applications.

- It's shipping with a 1M token context window, but Google soon plans to double this to 2M for processing entire code repositories and massive datasets.
- The model is available now in Google AI Studio and the Gemini app for Advanced subscribers, with API pricing coming in the weeks ahead.

Why it matters: As major AI labs push forward with reasoning, Google has made "thinking" a standard rather than a premium offering. The tech giant continues to push SOTA models despite lacking the hype of OpenAI — but with how fast AI is moving (and with GPT-5 and others lurking), it remains to be seen how long the new ranking lasts.

TOGETHER WITH TELY AI

[Run a lead-generating SEO blog on autopilot with AI](#)

AI agent runs expert
blog and SEO to get
leads on autopilot

The Rundown: With Tely AI, you don't need an SEO expert or content team — AI does it all. It researches your industry, competitors, and website to find the best keywords for Google, delivering well-researched, expert-level articles promoting your company.

With Tely AI, you can:

- Publish up to 60 articles a month
- See Google index results in just 2 weeks
- Enjoy full automation for writing, SEO, and publishing
- Convert traffic into valuable leads

[Get started and create your first article for free.](#)

OPENAI

OpenAI adds image generation to GPT-4o, Sora

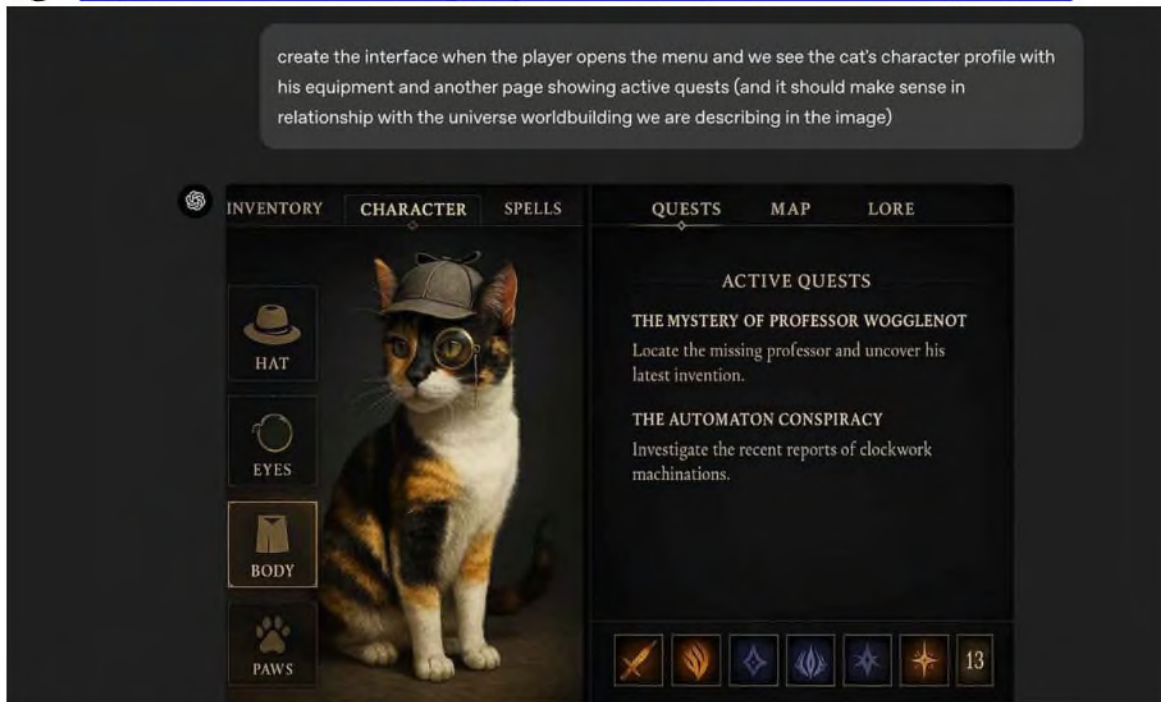

Image source: OpenAI

The Rundown: OpenAI [released](#) image generation within its GPT-4o model and Sora video generator, shifting from separate text and image systems to a fully integrated approach for producing more precise and contextually aware visuals via ChatGPT.

The details:

- GPT-4o treats images as part of its multimodal understanding, enabling more accurate text rendering and contextual awareness.
- The upgrade excels at generations like menus, diagrams, and infographics with readable text, addressing a major weakness of previous models.
- Users can also edit images with natural language, with the model able to maintain consistency between iterations and handle 10-20 objects in prompts.
- The new capability replaces DALL-E 3 as ChatGPT's default image generator for Free, Plus, Pro, and Team users, with Enterprise and Edu coming soon.

Why it matters: OpenAI's DALL-E lagged far behind other image generators, but this long-awaited native image upgrade looks to be worth the wait. With long-text generation, UI/UX design skills, and natural language editing, visual content generation is entering a completely new era with this next generation of models.

Transform concepts into production-ready pitch decks

The Rundown: In this tutorial, you will learn how to create professional storyboards, videos, and complete pitch decks from simple text prompts in minutes — without any design experience.

Step-by-step:

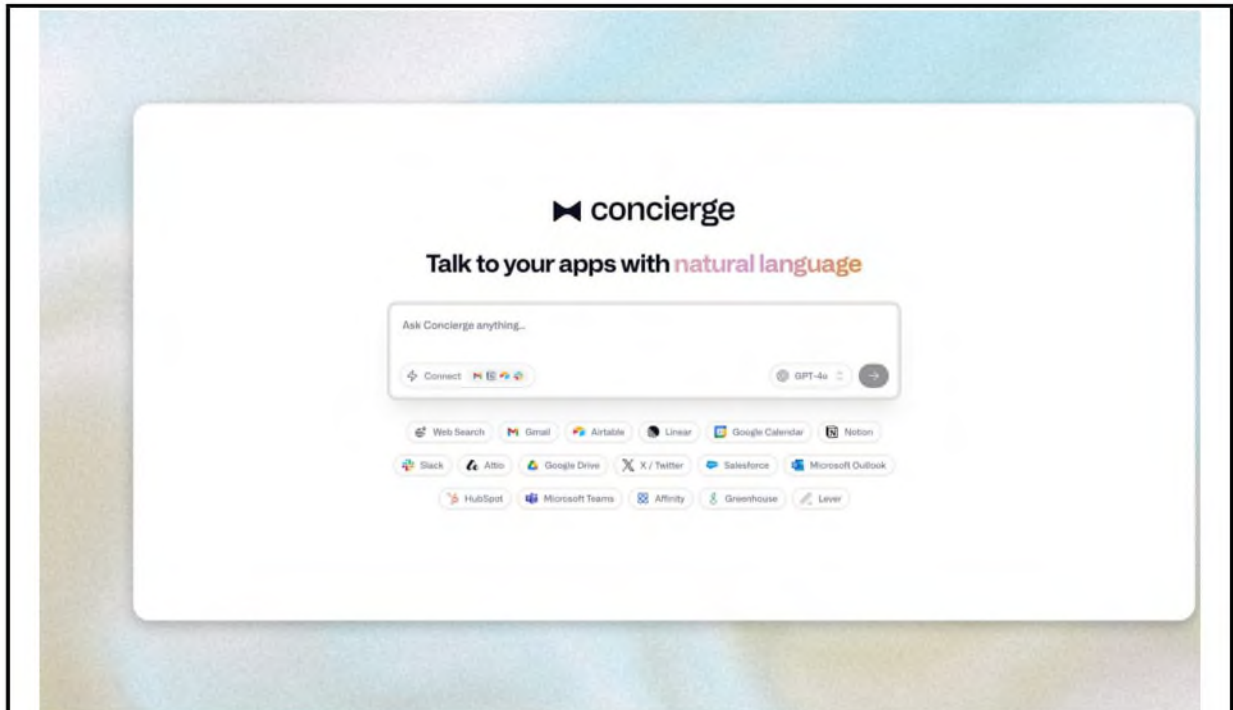

1. Head over to [LTX Studio](#), click *Start with a concept*, and enter a simple prompt like "30-second ad for [product]" with location and character details.
2. Customize project settings (aspect ratio and style) and edit scene elements using facial controls and generative fill.
3. Transform static frames into videos with the Motion Editor, and add a soundtrack or voiceovers to enhance your creation.
4. Export your finished project as a video, editing package, or as a professional pitch deck.

Pro tip: We did an extensive workshop showing how to transform your creative concepts into professional videos with LTX Studio [here](#). Additionally, the Rundown University paid members get a free month of the Standard Plan.

PRESENTED BY CONCIERGE

Unlock the power of AI across your apps

The Rundown: Wish your AI assistant could understand your context and take actions for you? Concierge solves this by connecting seamlessly to your apps (including Gmail, HubSpot, Jira, Linear, Slack, Attio, Sheets, Airtable, and more).

With Concierge, you can:

- Instantly connect your favorite apps and get real-time answers based on your data
- Use top AI models (GPT, Claude, DeepSeek, etc.) without juggling multiple subscriptions
- Draft emails, update CRMs, create tickets, summarize notes, or do deep research — all with a single prompt

[Try Concierge today](#) and get AI to truly work for you.

APPLE

[**Apple's billion-dollar bet on Nvidia AI hardware**](#)

Image source: Reve / The Rundown

The Rundown: Apple is reportedly [placing](#) a massive \$1B order for Nvidia's advanced servers, partnering with Dell and Super Micro Computer to set up its first generative AI infrastructure—signaling a major shift in the company's AI strategy amid Siri setbacks.

The details:

- Loop Capital analyst Anada Baruah reported the purchase includes roughly 250 Nvidia's GB300 NVL72 systems, with each server costing between \$3.7- 4M.
- Both Dell Technologies and Super Micro Computer will reportedly serve as key server partners in building Apple's new large-scale AI cluster.
- While previous [reports](#) indicated Apple was developing its own AI chips, this purchase may be a response to slower-than-expected progress in that area.
- The move also comes after Apple's [setbacks](#) in AI development, including delays to the planned AI-powered Siri upgrade and internal [restructuring](#).

Why it matters: After staying on the AI data center sidelines while competitors raced ahead, Apple appears to be acknowledging it needs serious computing power to compete — and must look externally to right some of the issues currently plaguing its in-house AI progress. But the clock is ticking, and AI progress isn't slowing down.

QUICK HITS

□ [Trending AI Tools](#)

VA INFORMATION SHEET: AN AUTOMATED SOLUTION FOR PROCESSING BACKLOG OF CHAMPVA APPLICATIONS

Background and Current State

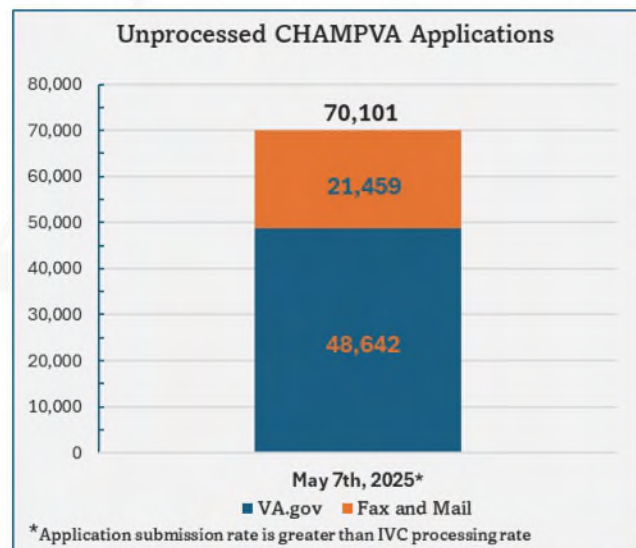

CHAMPVA (Civilian Health And Medical Program of the Department of Veterans Affairs) is an Office of Integrated Veterans Care (IVC) health care benefits program which serves spouses, dependents, and survivors of Veterans who meet certain service-connected disability requirements. This program supports the families of Veterans whose military service left them permanently and totally disabled, or who died due to a service-connected condition. As such, it is one of the most important ways VA delivers on its sacred mission.

To enroll in CHAMPVA, applicants must complete and submit [VA Form 10-10d](#) to the CHAMPVA Program Office via the VA.gov [application portal](#), fax, or mail. Once received, program staff currently must **manually** enter application information into the VA Claims Processing and Eligibility (CP&E) system and subsequently make an eligibility determination.

Administrative Backlog

Currently, CHAMPVA applications are processed by first opening each Form 10-10d and **manually** entering information from each data field into CP&E. This transfer requires between **37 and 61 separate data entry and administrative steps per application**, contributing to significant administrative burden. Combined with recent staffing shortages, this manual workflow has resulted in a backlog of **70,000 unprocessed applications** and a wait time of **162 days** before an application is seen by a person.

While processing of future applications will be streamlined through implementation of an Application Programming Interface (API) in August 2025, this backlog remains untenable and represents a disservice to our Veterans and their spouses, dependents, and survivors.

Automated Solution for Manual Processing

To address this backlog, a project team led by the Office of the CTO/CAIO (OIT), and includes Product Delivery Services (OIT) and DHO National AI Institute (VHA) team members, are leveraging an industry-leading AI/ML tool (Amazon Textract) and existing OIT cloud environment to extract information from Form 10-10d PDFs for ingesting into CP&E in a fully automated fashion, thus alleviating administrative burden, producing time-cost savings, and enabling IVC program staff to focus on eligibility determinations rather than data entry tasks.

Current Status and Next Steps

- As of May 8th, the project team has secured access to the Form 10-10d PDF repository, extracted data from a sample of unprocessed applications, and provided CP&E staff with an output sample text file to ingest into CP&E.
- Over the next two weeks, the project team will develop an automated CP&E ingestion for the text file. The first batch of applications to be processed will be the 48k VA.gov PDFs followed by the 21k faxed and mailed PDFs. The project team will also test the pipeline to ensure successful data exchange and develop an automated solution that meets IVC needs for handling duplicates during the same two-week period. By **May 27th**, the end-to-end solution will begin processing the 48k VA.gov PDFs and populating data in CP&E. By **May 29th**, the remaining 21k faxed and mailed PDFs will be processed.
- We aim to eliminate the data entry backlog, saving significant time. At this time, each application still must undergo manual eligibility determination after this step.

Future Considerations

The current focus of the project team is to eliminate the manual CP&E data entry process and the application backlog. Explorations into using AI and automation to extract information from claims and assist IVC with determining CHAMPVA eligibility are up next.

Hi - Yes, (b)(6) from OIT is coordinating with (b)(6) and his team to ensure this near-term work to leverage automation for application ingest is included in the larger and longer-term plan. Most recent meetings held were Friday, May 9th and today, May 12th to stay in lock step.

I heard a recent estimate that the potential size of the opportunity is 6.5 million keystrokes which may be automatable with these tools to support faster data entry. Looking forward to seeing the progress.

Subject: RE: Update - Using AI to Help with ChampVA Backlog

Thank you (b)(6) but it's not necessary to work solely with me. Please continue working directly with (b)(6) and (b)(6) but cc me and add me as leadership to any decision meetings as appropriate.

I believe Dr, Llorente's intention, as we agreed via email last week, is simply that IT and business coordinate closely on future initiatives. This is best practice in dev ops so we synch business need with technical requirements. I look forward to working with this innovation team – it is a very good thing for our Veterans and family members!

To: (b)(6)@listserv.gsa.gov' (b)(6)@listserv.gsa.gov>
Subject: [EXTERNAL] 2025 AI Use Case Inventory Reporting Guidance

Good afternoon, CAIOs:

We are pleased to share the 2025 AI Use Case Inventory instructions and reporting tool with you all! Attached, you'll find the set of instructions that covers a number of reporting requirements from the Advancing American AI Act and OMB Memorandum M-25-21, including:

1. Conducting an annual inventory of AI use cases,
2. Reporting consolidated information on certain widely used commercial AI, and
3. Providing information about waivers granted under Section 4 of the appendix to OMB Memorandum M-25-21.

Additionally, attached is the full set of questions for the 2025 AI Use Case Inventory. Both of these documents are available on the Inventory Connect page at <https://community.connect.gov> (b)(6); (b)(5)
Agencies are encouraged to reference this page periodically for additional resources. Note that reporting deadlines can be found in the instructions and on the Connect page.

Agencies must complete the above reporting requirement through OMB Collect, which can be accessed directly here <https://collect.omb.gov> (b)(6); (b)(5)

An important note about accessing the reporting tool: An active MAX.gov account is required to create and submit forms in OMB Collect. If you experience any issues, please reach out to

(b)(6)@max.gov (cc: (b)(6)@omb.eop.gov) for further assistance regarding your account.

Lastly, **please stay tuned for upcoming Office Hours** to walk through the reporting tool and answer questions about the attached guidance. In the interim, don't hesitate to reach out to

(b)(6)@omb.eop.gov with any questions.

--

Thanks,
OFCIO/CAIO Council Support

GUIDANCE ON 2025 AGENCY ARTIFICIAL INTELLIGENCE REPORTING

June 27, 2025

The Advancing American AI Act,¹ Executive Order (EO) 13960, *Promoting the Use of Trustworthy Artificial Intelligence in the Federal Government*,² and Office of Management and Budget (OMB) Memorandum M-25-21, *Accelerating Federal Use of AI through Innovation, Governance, and Public Trust*,³ require Federal agencies⁴ to report on their use of artificial intelligence (AI). With limited exceptions, agencies must conduct an annual inventory of their AI use cases, report consolidated information on certain widely used commercial AI, and provide information about waivers granted under Section 4 of the appendix to OMB Memorandum M-25-21.

1. INVENTORY OF ARTIFICIAL INTELLIGENCE USE CASES

Federal agencies are required to conduct an annual inventory of their AI use cases. The Director of the OMB is charged with issuing instructions to agencies for the collection, reporting, and publication of information about agency AI use.

a. Agency Inventory Reporting to OMB

To streamline agency AI data calls, OMB has established two categories of reporting: Consolidated AI Use Case Reporting and Individually-Reported AI Use Cases.

- i. Consolidated AI Use Case Reporting: As AI solutions become more ubiquitous in agency enterprises and commercial software, it is impracticable to require individualized reporting for all instances of AI that rely on commercial-off-the-shelf products or services. However, to fulfill statutory obligations, these use cases cannot be omitted entirely from agency reporting and agencies must still annually certify the existence of such use cases to OMB and the public.

By **November 4, 2025**, each agency (except for the Department of Defense and elements of the Intelligence Community), must certify use of any AI use cases listed in this section to OMB by completing a form at <https://collect.omb.gov> (b)(6); (b)(5) Note that agencies must still individually-report any use case that is determined to be high-impact, as defined in Section 5 of the appendix to OMB Memorandum M-25-21.

¹ Pub. L. No. 117-263, div. G, title LXXII, subtitle B, §§ 7224(a), 7224(d)(1)(B), and 7225 (40 U.S.C. 11301 note), <https://www.congress.gov/117/plaws/publ263/PLAW-117publ263.pdf>.

² Executive Order 13960, *Promoting the Use of Trustworthy Artificial Intelligence in the Federal Government* (Dec. 3, 2020), <https://www.federalregister.gov/documents/2020/12/08/2020-27065/promoting-the-use-of-trustworthy-artificial-intelligence-in-the-federal-government>.

³ OMB Memorandum M-25-21, *Accelerating Federal Use of AI through Innovation, Governance, and Public Trust* (Apr. 3, 2025), <https://www.whitehouse.gov/wp-content/uploads/2025/02/M-25-21-Accelerating-Federal-Use-of-AI-through-Innovation-Governance-and-Public-Trust.pdf>.

⁴ The term “agency” is defined in 44 U.S.C. § 3502(1); see Advancing American AI Act, § 7223(1).

Below is a list of widely used AI use cases that may be reported collectively in an agency's AI use case inventory. If a use case is present across many different offices, agencies can report it once, so long as it meets the criteria below:

- a. Scheduling internal-to-government meetings or appointments or setting reminders using AI.
 - b. Logging and analyzing time spent on tasks using AI-powered time management tools.
 - c. Transcribing, summarizing, or other efforts that improve the accessibility of a virtual meeting or interview using AI.
 - d. Prioritizing and categorizing incoming emails using AI.
 - e. Editing images, videos, or other public affairs materials using AI.
 - f. Scheduling and managing social media posts using AI.
 - g. Generating first drafts of documents, briefing, or communication materials using AI.
 - h. Improving the quality of written communications using AI tools.
 - i. Summarizing the key points of a lengthy report using AI.
 - j. Creating visual representations of data sets for reports or presentations using AI.
 - k. Using AI-assisted tools in word processors.
 - l. Generating code using AI.
 - m. Searching for agency information using a knowledge retrieval system.
 - n. Identifying and cataloging items in a storage room using AI-driven image recognition.
 - o. Managing or implementing security controls for information systems (e.g., cybersecurity) using AI.
 - p. Managing and prioritizing internal service or help desk tickets using AI.
 - q. Curating news articles and updates based on user preferences using AI.
 - r. Planning travel routes using AI-driven map applications.
 - s. Finding and booking travel accommodations using AI-powered platforms.
 - t. Unlocking smartphones or other devices without the need for passwords or PINs using AI-based facial recognition technology.
- ii. Individually-Reported AI Use Cases: By **November 4, 2025**, each agency (except for the Department of Defense and elements of the Intelligence Community), must submit an inventory of its AI use cases to OMB at <https://collect.omb.gov/> (b)(6); (b)(5)

Agencies must inventory all AI use cases in pre-deployment,⁵ pilot,⁶ deployed,⁷ or retired⁸ status regardless of whether they are implemented using standalone AI capabilities or AI that is embedded within other systems or applications. Additionally, agencies must inventory use cases regardless of whether the AI was developed or procured by the agency or developed or procured by a third party for the agency.

⁵ An AI use case is considered in pre-deployment status if it is in the development or acquisition stage.

⁶ A pilot use case has been deployed in a limited test or pilot capacity. For further context, refer to Section 4(a)(ii) of the appendix to OMB Memorandum M-25-21.

⁷ An AI use case is considered operational if it is being actively authorized or utilized to support the functions or mission of an agency.

⁸ The use case was reported in the agency's prior year's inventory, but its development and/or use has since been discontinued. Retired use cases must be reported as such in one consecutive inventory following the year in which it was operational. These use cases can be omitted from future year reporting; however, the unique use case identifier must not be repeated.

When unsure whether to report a use case, agencies should err on the side of inclusion, except for the exclusions set forth below. OMB will work with agencies to review agency submissions in line with OMB's required data fields. Section 5 of this document lists all potential data fields that a particular AI use case may be subject to.

- iii. Excluded AI Use Cases: Agencies must inventory all AI use cases, except for:
 - a. AI when it is being used either as a component of a National Security System or within the Intelligence Community; and
 - b. AI when it is being used to carry out basic research or applied research; however, agencies must still inventory any use cases where the purpose of such research is to develop particular AI applications for agency use, where the AI is currently being used to control or significantly influence a decision or outcome about individuals, or where the AI has an approved agreement for transition into agency operations.

Additionally, agencies may remove use cases reported in prior years' submissions that no longer meet the inclusion criteria.

b. Public-Facing Agency Inventory Reporting

In addition to the requirement in Section 1(a) to report to OMB, by **December 2, 2025**, each agency (except for the Department of Defense and elements of the Intelligence Community), must also post a consolidated, machine-readable CSV of all publicly releasable use cases from Section 1(a)(ii) of this document, as well as the list of consolidated AI use cases from Section 1(a)(i) of this document, on their agency's website at [agency.gov]/ai.

Agencies are encouraged to update their public inventories on an ongoing basis to reflect their current use of AI. Further, agencies must update their inventory, as appropriate, after December 2, 2025 to reflect necessary compliance with the April 3, 2026 deadline to implement risk management practices for high-impact AI use cases in OMB Memorandum M-25-21.

- i. AI Use Cases That Can Be Withheld from Public Reporting: Agencies are permitted to remove any use case from their public inventory whose sharing would be inconsistent with applicable law and governmentwide policy, such as the exemptions from public disclosure provided in 5 U.S.C. § 552. Where particular details of a use case cannot be shared or released publicly, agencies must only exclude those details, while including any fields that can be shared or released. The fact that a use case is not public-facing is not an adequate justification for withholding it from public sharing, nor is a desire to conceal inefficiency, violations of law, or administrative error, or to prevent embarrassment to an organization or agency.

In their public inventories, agencies may also remove the "Use Case ID" column, and replace the "Email Address" column with an email address designated for public inquiries.

- ii. Responses Accessible to the General Public: To ensure readability and transparency of agencies use case inventories to the public, agencies are directed to use plain language responses, where appropriate. As part of their efforts to use plain language, agencies should avoid or minimize the use of acronyms, and should define any acronyms when first used.

c. Agencies Not Using AI

If an agency does not utilize AI, it must notify OMB by sending an email to (b)(6); (b)(5)@omb.eop.gov and post a notice at [agency.gov]/ai with a statement indicating no current use of AI technology. Notices should be posted in HTML format.

2. REPORTING ON WAIVERS FROM SECTION 4 OF THE APPENDIX TO OMB MEMORANDUM M-25-21

The following guidance provides the mechanisms for Federal agencies to report on any waivers granted under Section 4(a)(ii) of the appendix to OMB Memorandum M-25-21.

In coordination with other relevant officials, an agency Chief AI Officer (CAIO) may waive one or more of the minimum risk management practices in Section 4(b) of the appendix to OMB Memorandum M-25-21 for a specific covered AI application or component after making a written determination, based upon a system-specific and context-specific risk assessment, that fulfilling the requirement would increase risks to safety or rights overall or would create an unacceptable impediment to critical agency operations. An agency CAIO, in coordination with other relevant officials, may also revoke a previously issued waiver at any time.

a. Reporting on Waivers

Within 30 days of granting or revoking a waiver, agency CAIOs must report this to OMB by completing a form at <https://collect.omb.gov> (b)(6); (b)(5) for the waived use case.

By **April 3, 2026**, agencies must also make a summary of each waiver and its corresponding justification publicly available on their websites at [agency.gov]/ai. If there are instances where an agency CAIO has issued a waiver for a use case that is withheld from public reporting, agencies must still publicly report the total number of use cases for which there is at least one waived risk management requirement and the total number of waived risk management requirements for each use case.

3. DEFINITIONS

Artificial Intelligence (AI): Agencies shall apply the definition of AI provided in Section 238(g) of the John S. McCain National Defense Authorization Act for Fiscal Year 2019⁹ and refer to the technical context provided in Section 5 of the appendix to OMB Memorandum M-25-21 to further guide interpretation of that definition.

AI Use Case: For the purposes of this inventory, an AI use case refers to the specific scenario in which AI is designed, developed, procured, or used to advance the execution of agencies' missions and their delivery of programs and services, enhance decision making, or provide the public with a particular benefit.

⁹ Pub. L. No. 115-232, § 238(g), <https://www.govinfo.gov/content/pkg/PLAW-115publ232/pdf/PLAW-115publ232.pdf>.

4. CONSOLIDATED TABLE OF ACTIONS

<i>Responsible Entity</i>	<i>Action</i>	<i>Section</i>	<i>Deadline</i>
Each Agency**	Submit an inventory of AI use cases to OMB, to include individually-reported AI use cases and collective reporting on agency use of certain widely used commercial AI	1(a)(i), 1(a)(ii)	November 4, 2025
Each Agency**	Publicly release an inventory of AI use cases, to include individually-reported AI use cases and a list of agency use of certain widely used commercial AI	1(b)	December 2, 2025
Each Agency*	Report any waivers that are granted or revoked to OMB	2(a)	Within 30 days of granting/revoking
Each Agency*	Publicly release a summary of each active waiver and its corresponding justification	2(a)	April 3, 2026

* Excluding elements of the Intelligence Community.

** Excluding the Department of Defense and elements of the Intelligence Community.

5. 2025 AI USE CASE INVENTORY FIELDS

The following list represents all potential fields that a particular AI use case may be subject to. Not all AI use cases will be required to respond to every field, as required fields are dependent on the use case's maturity and risk level.

Data Type	Field
Structured Text	Use Case ID
Free Text	Use Case Name
Prepopulated	Agency
Free Text	Bureau/Component
Email	Email Address
Multiple Choice	Should this AI use case be withheld from public reporting?
Multiple Choice	Stage of Development
Multiple Choice	Is the AI use case high-impact?
Multiple Choice	Use Case Topic Area
Multiple Choice	AI Classification
Free Text	What problem is the AI intended to solve?
Free Text	What are the expected benefits and positive outcomes from the AI for an agency's mission and/or the general public?
Free Text	Describe the AI system's outputs.
Date	Date when AI use case became operational or the pilot's start date
Multiple Choice, Free Text	Was the system involved in this use case purchased from a vendor or developed under contract(s) or in-house? Vendor(s) Name, if applicable.
Multiple Choice, Free Text	Does this AI use case have an associated Authorization to Operate (ATO)? System(s) Name, if applicable.
Free Text	Describe any data used to train, fine-tune, and/or evaluate performance of the model(s) used in this use case.
Link	If the data is required to be publicly disclosed as an open government data asset, provide a link to the entry on the Federal Data Catalog.
Multiple Choice	Does this AI use case involve personally identifiable information (PII) that is maintained by the agency?
Link	If publicly available, provide the link to the AI use case's associated Privacy Impact Assessment (PIA), if any.
Select all that apply.	Which, if any, demographic variables does the AI use case explicitly use as model features?
Multiple Choice	Does this project include custom-developed code?
Link	If the code is open source, provide the link for the publicly available source code.

Fully deployed AI use cases, that are determined by the agency to be high-impact, are required to report on the following fields related to risk management.

Data Type	Field
Multiple Choice	Has pre-deployment testing been conducted for this AI use case?
Multiple Choice	Has an AI impact assessment been completed for this AI use case?
Free Text	What are the potential impacts of using the AI for this particular use case and how were they identified?
Multiple Choice	Has an independent review of the AI use case been conducted?

Multiple Choice	Is there a process to conduct ongoing monitoring to identify any adverse impacts to the performance and security of the AI functionality, as well as to privacy, civil rights, and civil liberties?
Multiple Choice	Has the agency established sufficient and periodic training for operators of the AI to interpret and act on the its output and managed associated risks?
Multiple Choice	Does this AI use case have an appropriate fail-safe that minimizes the risk of significant harm?
Multiple Choice	Is there an established appeal process in the event that an impacted individual would like to appeal or contest the AI system's outcome?
Select all that apply.	What steps has the agency taken to consult and incorporate feedback from end users of this AI use case and the public?

2025 AI Use Case Inventory Questions

Overview of Questions

SECTION 1: Use Case Identifiers	3
Use Case ID	3
Use Case Name	3
Agency	3
Bureau/Component	3
Email Address	3
Should this AI use case be withheld from public reporting?	3
Stage of Development	4
Is the AI use case high-impact?	4
Provide a justification for why the use case is determined to be not high-impact.	4
SECTION 2: Use Case Summary	5
Use Case Topic Area	5
AI Classification	5
What problem is the AI intended to solve?	5
What are the expected benefits and positive outcomes from the AI for an agency's mission and/or the general public?	5
Describe the AI system's outputs.	5
SECTION 3: Documentation	5
Date when AI use case became operational or the pilot's start date	5
Was the system involved in this use case purchased from a vendor or developed under contract(s) or in-house?	5
Vendor(s) Name	6
Does this AI use case have an associated Authorization to Operate (ATO)?	6
System(s) Name	6
SECTION 4: Data & Code	6
Describe any data used to train, fine-tune, and/or evaluate performance of the model(s) used in this use case.	6
If the data is required to be publicly disclosed as an open government data asset, provide a link to the entry on the Federal Data Catalog.	7
Does this AI use case involve personally identifiable information (PII) that is maintained by the agency?	7
If publicly available, provide the link to the AI use case's associated Privacy Impact Assessment (PIA), if any.	7
Which, if any, demographic variables does the AI use case explicitly use as model features?	7
Does this project include custom-developed code?	7

If the code is open source, provide the link for the publicly available source code.	7
SECTION 5: Risk Management	8
Has pre-deployment testing been conducted for this AI use case?	8
Has an AI impact assessment been completed for this AI use case?	8
What are the potential impacts of using the AI for this particular use case and how were they identified?.....	8
Has as independent review of the AI use case been conducted?	8
Is there a process to conduct ongoing monitoring to identify any adverse impacts to the performance and security of the AI functionality, as well as to privacy, civil rights, and civil liberties?.....	9
Has the agency established sufficient and periodic training for operators of the AI to interpret and act on the its output and managed associated risks?	9
Does this AI use case have an appropriate fail-safe that minimizes the risk of significant harm?	10
Is there an established appeal process in the event that an impacted individual would like to appeal or contest the AI system’s outcome?	10
What steps has the agency taken to consult and incorporate feedback from end users of this AI use case and the public?	10
APPENDIX A: Use Case Topic Areas	12
APPENDIX B: AI Classifications	15

SECTION 1: Use Case Identifiers				
FIELD	DATA TYPE	INPUT CHOICES	FIELD DESCRIPTION	REQUIRED?
Use Case ID	Structured Text	[Agency Abbrev.] – [#]	Unique identifier for AI use case. Use cases should maintain the same ID if included in previous year's inventory.	Y
Use Case Name	Free Text		Title of the AI use case.	Y
Agency	Prepopulated	Prepopulated	Agency responsible for the AI use case.	Y
Bureau/Component	Free Text		Specific organization(s) within the agency responsible for the AI use case.	Y
Email Address	Free Text, Email		Email address of the individual or team who works with or is responsible for the AI use case.	Y
Should this AI use case be withheld from public reporting?	Multiple Choice	<i>a) No</i> <i>b) Yes – agency has determined that there's a risk to disclosure, such as a harm to an interest protected by a FOIA exemption</i> <i>c) Yes – disclosure is prohibited by law</i> <i>d) Other</i>	Whether the AI use case should be withheld from public reporting and the reason for why.	Y

Stage of Development	Multiple Choice	<ul style="list-style-type: none"> a) <i>Pre-deployment</i> – The use case is in a development or acquisition status. b) <i>Pilot</i> – The use case has been deployed in a limited test or pilot capacity. c) <i>Deployed</i> – The use case is being actively authorized or utilized to support the functions or mission of an agency. d) <i>Retired</i> – The use case was reported in the agency’s prior year’s inventory, but its development and/or use has since been discontinued. 	The AI use case’s current stage of development.	Y
Is the AI use case high-impact?	Multiple Choice	<ul style="list-style-type: none"> a) <i>High-impact</i> b) <i>Presumed high-impact, but determined not high-impact</i> c) <i>Not high-impact</i> 	Whether the AI use case is high-impact, as defined in Section 5 of the appendix to OMB Memorandum M-25-21.	Y
Provide a justification for why the use case is determined to be not high-impact.	Free Text			Y, but question should <i>only</i> appear if “ <i>Presumed high-impact, but determined not high-impact</i> ” is selected for the previous question.
ONLY <i>pre-deployment, pilot, and deployed</i> use cases will continue below.				

SECTION 2: Use Case Summary				
FIELD	DATA TYPE	INPUT CHOICES	FIELD DESCRIPTION	REQUIRED?
Use Case Topic Area	Multiple Choice	See Appendix A for the list of inputs.	The topic area that most closely aligns with the AI use case.	Y
AI Classification	Multiple Choice	See Appendix B for the list of inputs.	The classification of AI technology that most closely aligns with the AI use case. Note that an AI use case may rely on multiple classifications; however, agencies should select the choice that most closely aligns.	Y
What problem is the AI intended to solve?	Free Text			Y
What are the expected benefits and positive outcomes from the AI for an agency's mission and/or the general public?	Free Text	Expected benefits may include, for example: <i>cost savings, reducing customer wait times, or improving access to government benefits.</i>	Description of the expected benefits and positive outcomes from the AI for an agency's mission and/or the general public.	Y
Describe the AI system's outputs.	Free Text		Description of what the AI system outputs, whether it's a prediction, recommendation, decision, etc.	Y
ONLY pilot and deployed use cases will continue below.				

SECTION 3: Documentation				
FIELD	DATA TYPE	INPUT CHOICES	FIELD DESCRIPTION	REQUIRED?
Date when AI use case became operational or the pilot's start date	Date (MM/YYYY)		Date when the AI use case was fully operational or the pilot's start date.	Y
Was the system involved in this use case purchased from a vendor or developed	Multiple Choice	a) <i>Purchased from a vendor</i> b) <i>Developed in-house</i>	Whether the system involved in the use case was developed, or is expected to be developed, exclusively with contracting	Y

under contract(s) or in-house?		<i>c) Developed with both contracting and in-house resources</i>	resources, in-house, or a combination of both.	
Vendor(s) Name	Free Text		Identification of the vendor(s) involved in the use case's development and/or maintenance.	Y, but question should only appear if "Purchased from a vendor" or "Developed with both contracting and in-house resources" is selected for the previous question.
Does this AI use case have an associated Authorization to Operate (ATO)?	Multiple Choice	<i>a) Yes b) No</i>	Whether the AI use case itself has an associated Authorization to Operate (ATO), or is part of another system that has an ATO.	Y
System(s) Name	Text		Name of the system(s) associated with this AI use case, according to the ATO.	Y, but question should <i>only</i> appear if "Yes" is selected for the previous question.

SECTION 4: Data & Code				
FIELD	DATA TYPE	INPUT CHOICES	FIELD DESCRIPTION	REQUIRED?
Describe any data used to train, fine-tune, and/or evaluate performance of the model(s) used in this use case.	Free Text		General description of the data used in the AI's design, development, training, testing, and operation. This should include a description of any data provided by the agency, whether the datasets are research datasets, publicly available, external, etc. and to the extent possible,	Y

			sufficient descriptive information from the vendor.	
If the data is required to be publicly disclosed as an open government data asset, provide a link to the entry on the Federal Data Catalog.	Free Text, Link			N, but question always appears.
Does this AI use case involve personally identifiable information (PII) that is maintained by the agency?	Multiple Choice	<i>a) Yes</i> <i>b) No</i>	Whether the AI use case involves personally identifiable information (PII), as defined in OMB Circular A-130.	Y
If publicly available, provide the link to the AI use case's associated Privacy Impact Assessment (PIA), if any.	Free Text, Link		Whether the AI use case itself has an associated PIA, or is part of another system that has a PIA.	N, but question always appears.
Which, if any, demographic variables does the AI use case explicitly use as model features?	Select all that apply.	<i>a) Race/Ethnicity</i> <i>b) Sex</i> <i>c) Age</i> <i>d) Religious Affiliation</i> <i>e) Socioeconomic Status</i> <i>f) Ability Status</i> <i>g) Residency Status</i> <i>h) Marital Status</i> <i>i) Income</i> <i>j) Employment Status</i> <i>k) None of the above</i> <i>l) Other</i>	Identification of the demographic features explicitly utilized in the AI use case's data/model(s).	Y
Does this project include custom-developed code?	Multiple Choice	<i>a) Yes</i> <i>b) No</i>	Whether this AI project includes "custom-developed code," as defined in OMB Memorandum M-25-21.	Y
If the code is open source, provide the link for the publicly available source code.	Free Text, Link		Link to publicly available source code for the AI use case, if available.	N, but question always appears.

ONLY high-impact deployed use cases will continue below.

SECTION 5: Risk Management				
FIELD	DATA TYPE	INPUT CHOICES	FIELD DESCRIPTION	REQUIRED?
Has pre-deployment testing been conducted for this AI use case? Practice: Conduct Pre-Deployment Testing.	Multiple Choice	a) <i>Yes</i> b) <i>In-progress</i> c) <i>Agency CAIO has waived this minimum practice and reported such waiver to OMB</i>	Whether pre-deployment testing has been conducted for the AI use case, consistent with Section 4(b)(i) of the appendix to OMB Memorandum M-25-21.	Y
Has an AI impact assessment been completed for this AI use case? Practice: Complete AI Impact Assessment	Multiple Choice	a) <i>Yes</i> b) <i>In-Progress</i> c) <i>Agency CAIO has waived this minimum practice and reported such waiver to OMB</i>	Whether an AI impact assessment for the AI use case has been completed, consistent with Section 4(b)(ii) of the appendix to OMB Memorandum M-25-21.	Y
What are the potential impacts of using the AI for this particular use case and how were they identified? Sub-practice: Complete AI Impact Assessment	Free Text		Identification of the reasonably foreseeable impacts from using the AI use case, to include impacts on the privacy, civil rights, and civil liberties of the public.	Y
Has an independent review of the AI use case been conducted?	Multiple Choice	a) <i>Yes – by another appropriate agency office or reviewer not directly involved in the AI's development</i>	Whether an independent review of the AI use case has been conducted by an office, oversight board, or individual within the agency who has not been involved in the AI's development.	Y

Sub-practice Complete AI Impact Assessment		<i>b) Yes – by an agency AI oversight board not directly involved in the AI’s development</i> <i>c) Yes – by the CAIO</i> <i>d) In-progress</i> <i>e) Agency CAIO has waived this minimum practice and reported such waiver to OMB</i>		
<p>Is there a process to conduct ongoing monitoring to identify any adverse impacts to the performance and security of the AI functionality, as well as to privacy, civil rights, and civil liberties?</p> <p>Practice: Conduct Ongoing Monitoring for Performance and Potential Adverse Impacts</p>	Multiple Choice	<i>a) Yes, sufficient monitoring protocols have been established</i> <i>b) Development of monitoring protocols is in-progress</i> <i>c) Agency CAIO has waived this minimum practice and reported such waiver to OMB</i>	Whether a process to conduct ongoing monitoring for the AI use case has been established, consistent with Section 4(b)(iii) of the appendix to OMB Memorandum M-25-21.	Y
<p>Has the agency established sufficient and periodic training for operators of the AI to interpret and act on the its output and managed associated risks?</p> <p>Practice: Ensure Adequate Human Training and Assessment</p>	Multiple Choice	<i>a) Yes, sufficient and periodic training has been established</i> <i>b) Establishment of sufficient and periodic training is in-progress</i> <i>c) Agency CAIO has waived this minimum practice and reported such waiver to OMB</i>	Whether sufficient and periodic training for operators of the AI use case has been established, consistent with Section 4(b)(iv) of the appendix to OMB Memorandum M-25-21.	Y

<p>Does this AI use case have an appropriate fail-safe that minimizes the risk of significant harm?</p> <p>Practice: Provide Additional Human Oversight, Intervention, and Accountability</p>	Multiple Choice	<p>a) <i>Yes</i> b) <i>Not applicable</i> c) <i>In-progress</i> d) <i>Agency CAIO has waived this minimum practice and reported such waiver to OMB</i></p>	Whether the AI use case has an appropriate fail-safe that minimizes the risk of significant harm, consistent with Section 4(b)(v) of the appendix to OMB Memorandum M-25-21.	Y
<p>Is there an established appeal process in the event that an impacted individual would like to appeal or contest the AI system's outcome?</p> <p>Practice: Offer Consistent Remedies or Appeals</p>	Multiple Choice	<p>a) <i>Yes, an appropriate appeal process has been established</i> b) <i>Not applicable</i> c) <i>Establishment of an appropriate appeal process is in-progress</i> d) <i>Law, operational limitations, or governmentwide guidance precludes an opportunity for an individual to appeal</i> e) <i>Agency CAIO has waived this minimum practice and reported such waiver to OMB</i></p>	Whether there is an established appeal process for this AI use case in the event that an impacted individual would like to appeal or contest the AI system's outcome, consistent with Section 4(b)(vi) of the appendix to OMB Memorandum M-25-21.	Y
<p>What steps has the agency taken to consult and incorporate feedback from end users of this AI use case and the public?</p> <p>Practice: Consult and Incorporate Feedback</p>	Select all that apply.	<p>a) <i>Direct usability testing</i> b) <i>General solicitations of feedback and comments from the public</i> c) <i>Public hearings or meetings</i> d) <i>Other</i> e) <i>In-progress</i></p>	Identification of what steps the agency has taken to consult and incorporate feedback from end users of this AI use case and the public, consistent with Section 4(b)(vii) of the appendix to OMB Memorandum M-25-21.	Y

from End Users and the Public		f) <i>Agency CAIO has waived this minimum practice and reported such waiver to OMB</i>		
-------------------------------	--	--	--	--

APPENDIX A: Use Case Topic Areas

CATEGORY	EXAMPLES <i>(An AI use case is likely to fall into this category if it is used in one of these contexts or a substantively similar one.)</i>
Administrative Functions	<ul style="list-style-type: none"> • AI used for administrative functions, to include: <ul style="list-style-type: none"> ○ AI used for records management, ○ AI used for FOIA response, or ○ AI use for internal investigations and audits, including OIG. • AI used for project management. • AI used for facilities and property management, to include: <ul style="list-style-type: none"> ○ AI used for equipment maintenance, or ○ AI used for facilities access and security.
Human Resources	<ul style="list-style-type: none"> • AI used for employee training and professional development. • AI used by the agency to process its employee disability and accommodations requests. • AI use for employee safety and workers compensation processing. • AI used for internal human resources management, to include: <ul style="list-style-type: none"> ○ AI used for payroll processes, ○ AI used in hiring, or ○ AI used for agency travel processing.
Emergency Management	<ul style="list-style-type: none"> • AI used for prediction or response to emergencies, such as roadside emergencies, public health emergencies, or emergency response for natural disasters.
Energy & the Environment	<ul style="list-style-type: none"> • AI used for energy innovation, adoption, or use. • AI used in the production or management of nuclear energy. • AI used in the safety, security, or maintenance of energy plants and facility operations.
Government Benefits Processing	<ul style="list-style-type: none"> • AI used for improving access to government benefits. • AI used to assist the provision or processing of government benefits, to include: <ul style="list-style-type: none"> ○ AI used in Supplemental Nutrition Assistance Program (SNAP) and related programs, ○ AI used in Medicare & Medicaid, including fraud prevention, ○ AI used in unemployment benefits access, ○ AI used in scholarship or financial aid processing, or ○ AI used in Social Security, including fraud prevention. • AI used in the processing of housing grants and benefits, to conduct housing valuations, and in non-discrimination enforcement.

Health & Medical	<ul style="list-style-type: none"> • AI used to assist in medical research, clinical trials, or drug and vaccine development. • AI used in medical devices. • AI used to assist with providing healthcare, such as filling prescriptions, telehealth platforms, or virtual care options. • AI used to analyze and process healthcare data or health records. • AI used for monitoring of patient biometrics, diet, or mental health. • AI used for early intervention screening, diagnostics, or treatment planning. • AI used in drug safety, to include: <ul style="list-style-type: none"> ○ AI used for drug labeling ○ AI used in monitoring of adverse drug reactions, or ○ AI used for predicting drug shortages. • AI used in healthcare facility physical security or cybersecurity. • AI used in veterans' healthcare.
International Affairs	<ul style="list-style-type: none"> • AI used in international development and humanitarian assistance. • AI used when conducting foreign affairs, such as in conflict prediction or modeling. • AI used in the logistical routing of international commerce.
Information Technology	<ul style="list-style-type: none"> • AI used for Information and Communications Technology, to include: <ul style="list-style-type: none"> ○ AI used to assist with help desk activities (chatbots, submitting tickets), or ○ AI used in other general IT activities within an agency.
Cybersecurity	<ul style="list-style-type: none"> • AI used in agency cybersecurity and privacy-enhancing activities, to include: <ul style="list-style-type: none"> ○ AI used to scan and monitor network infrastructure for cybersecurity incidents, ○ AI used to analyze and investigate cybersecurity incidents, or ○ AI used to track and manage information technology assets or devices.
Law Enforcement	<ul style="list-style-type: none"> • AI used in domestic or international investigations, including forensics. • AI used in border protection activities, such as border control or border surveillance. • AI used in immigration and asylum services. • AI used for law enforcement activities.
Procurement & Financial Management	<ul style="list-style-type: none"> • AI used to facilitate procurement processes, to include: <ul style="list-style-type: none"> ○ AI used for acquisition planning, including advance acquisition planning, ○ AI used for market research, ○ AI used for optimizing supplier selection, or ○ AI used for contract management and administration. • AI used for acquisition data analytics. • AI used in finance management, to include: <ul style="list-style-type: none"> ○ AI used to assist with internal budgeting processes, or

	<ul style="list-style-type: none"> ○ AI used to manage and process payments.
Science	<ul style="list-style-type: none"> • AI used in earth sciences, including geography, atmospheric, climatology & environmental sciences, geology, oceanography, natural resources, forestry, or water resource management. • AI used in physical sciences, including physics, astrophysics, or chemistry. • AI used in life sciences, including zoology, botany, or biology. • AI used in space sciences and exploration, to include: <ul style="list-style-type: none"> ○ AI used in planetary geology, ○ AI use on spacecrafts, ○ AI used in satellite flights and explorations, or ○ AI used in investigations of celestial objects.
Service Delivery	<ul style="list-style-type: none"> • AI used for communicating with the public, to include: <ul style="list-style-type: none"> ○ AI used for customer service, to include customer call centers, chatbots, and other virtual assistants, ○ AI used for virtual voice response, ○ AI used for language translation or assistive technology, or ○ AI used as a feature of agency websites. • AI used in public affairs and correspondence, including for the solicitation or review of public comments.
Transportation	<ul style="list-style-type: none"> • AI used in the movement of vehicles, whether on land, underground, at sea, or in the air. • AI used for predictive infrastructure maintenance of runways, roads, or railways.
Other	<ul style="list-style-type: none"> • Use this category only when other categories don't apply, and provide an alternative category.

APPENDIX B: AI Classifications

CLASSIFICATION	DESCRIPTION	EXAMPLES <i>(An AI use case is likely to fall under this classification if it is used for one of these purposes or a substantively similar one.)</i>
Generative AI	AI that generates new or synthetic content (e.g., images, videos, audio, text, code).	Chatbots, image generation, code completion, synthetic media, data augmentation, retrieval-augmented generation (RAG), deep research
Agentic AI	AI systems that perform tasks or make decisions autonomously with minimal human intervention.	Task automation, personal assistants
Classical/Predictive Machine Learning	Models trained on data to make predictions or classifications based on identified patterns or relationships.	Sales forecasting, weather forecasting, spam detection, recommendation systems, credit/fraud scoring, anomaly detection
Computer Vision	AI that processes and interprets visual data (e.g., images and videos).	Object detection, facial recognition, biometric identification, medical imaging, image segmentation
Natural Language Processing (NLP)	AI that processes, interprets, and shares information in human language.	Sentiment analysis, speech-to-text, text-to-speech
Reinforcement Learning	AI trained through trial and error using rewards and penalties to optimize decision-making policies.	Robotics operating in physical environments, strategic game play, autonomous systems (drones)
Other	Use this category only when other categories don't apply, and provide an alternative category.	

2024 Agency AI Reporting per EO 14110 - AI Use Case Inventory Form Import
Section 1: Use Case Identifiers

Use Case ID	Use Case Name	Agency	Bureau	Use Case Topic Area	Other (Use Case Topic Area)	Is the AI use case found in the below list of general commercial AI products and services?	What is the intended purpose and expected benefits of the AI?	Describe the AI system's outputs.	Stage of Development	Is the AI use case rights-impacting, safety-impacting, both, or neither?	
VA-36	Evolv WDS - OSSO	VA	VHA: Veterans Health Adm Law & Justice			Creating visual representations of data sets for reports and presentations using AI	Using heat map technology to identify heat signature areas of interest for a heat map that includes objects the Operation and Maintenance	Both			
VA-52	VA Chat Copilot Meta Pilot	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			Improving the quality of written communications using AI tools	Administrative efficiency for VA employees	Chat Copilot is a generative AI interface that allows user Acquisition and/or Development	Neither		
VA-77	Avigilon Camera/Search Function - OSSO	VA	VHA: Veterans Health Adm Law & Justice			Searching for information using AI	A search function in a security video surveillance system/Video or picture of requested searches from the video s Operation and Maintenance	Both			
VA-93	CareCentra Next Level Personalized AI Health VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	This is an evidence based, randomized control trial AI solution that focuses on precision nudging. It is intended Implementation and Assessment	Neither			
VA-118	SafePointe WDS - OSSO	VA	VHA: Veterans Health Adm Law & Justice			Creating visual representations of data sets for reports and presentations using AI	Heat map detection for weapon detection/ Areas of interest for a heat map that includes objects the Retired	Both			
VA-1397	GE Xera-1997	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	VA's virtual representations of data sets for reports and presentations using AI	Operation and Maintenance	Both		
VA-130	Genesys Cloud Contact Center	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			Transcribing and summarizing a recorded meeting or interview using AI	Assist staff with knowledge based recommendations, cMost of genesys outputs are surfacing knowledge to ass Acquisition and/or Development	Neither			
VA-159	Verkada Camera - OSSO	VA	VHA: Veterans Health Adm Law & Justice			Searching for information using AI	Video search function inside a physical security camera Videos and images from the AI searches inside the physical Acquisition and/or Development	Both			
VA-161	MRI - GE Signa Artist	VA	VHA: Veterans Health Adm Health & Medical			Creating visual representations of data sets for reports and presentations using AI	AIR™ Recon DL is a deep-learning-based reconstruction MRI image reconstruction.	Operation and Maintenance	Both		
VA-171	Google Cloud Platform - CCAI / Dialogflow	VA	OIT: Office of Information & Government Services (includes Benefits and Service Delivery)			None of the Above	To allow for better self service options to veterans to in the output of GCP voice/chat is text to speech (TTS) and Acquisition and/or Development	Neither			
VA-200	Axon Body Camera and DMS - OSSO	VA	VHA: Veterans Health Adm Law & Justice			Searching for information using AI	To be able to search the data repository with better res To have better outputs in searching the systems data re Operation and Maintenance	Both			
VA-204	Ultrasound - GE Logic E10	VA	VHA: Veterans Health Adm Health & Medical			Creating visual representations of data sets for reports and presentations using AI	Auto Preset Assistant-Automatically activates the correctClinician decision support and workflow error reduction Operation and Maintenance	Both			
VA-216	Smart AI Bot Assistant	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	A machine learning and natural language processing sSmart Responder Chat Bot Use Case #1 - Real time reso Initiated	Rights-impacting	Both		
VA-245	Radiology - Siemens YSI0 Max	VA	VHA: Veterans Health Adm Health & Medical			Creating visual representations of data sets for reports and presentations using AI	Bone suppression: Suppresses bones on digital images to increase radiology digital image quality.	Operation and Maintenance	Both		
VA-257	Enterprise Precision Scanning and Indexing I VA	VA	VHA: Veterans Health Adm Health & Medical			Summarizing the key points of a lengthy report using AI	Generative AI required for summarization and note cre The output generates a summary of the patient health r Acquisition and/or Development	Neither			
VA-294	Nursing Proficiency Coach & Nurse Proficient VA	VA	VHA: Veterans Health Adm Education & Workforce			None of the Above	Two custom GPTs have been created: Nurse Proficiency; The output takes the nurse's input and returns a summar Implementation and Assessment	Neither			
VA-372	Parable 3D Wound Care Management System VA	VA	VHA: Veterans Health Adm Health & Medical			Creating visual representations of data sets for reports and presentations using AI	Traditional wound care methods call for hand measure 2D and 3D volumetric measurements are computed bas Operation and Maintenance	Both			
VA-380	VEO Virtual Analyst Pilot of Concept	VA	OIT: Office of Information & Government Services (includes Benefits and Service Delivery)			Searching for information using AI	The AIDV Dev/Test environment will provide a proof of Outputs will include data-informed English-language res Acquisition and/or Development	Neither			
VA-413	GE Portable Critical Care Suite 2.x	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-421	Patient Care Systems Integration Program I VA	VA	VHA: Veterans Health Adm Health & Medical			Transcribing and summarizing a recorded meeting or interview using AI	The PCSP AI is intended to improve the access to care fAll outputs listed below are written to patient record in Implementation and Assessment	Both			
VA-462	Billing Claims Prediction	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	The intended purpose of the AI is to support Revenue CThe model was trained on Third Party Community Care Implementation and Assessment	Neither			
VA-503	Scientific Medical Intelligence Operator VA	VA	OIT: Office of Information & Other	Cloud		None of the Above	Performance monitor of cloud applications	The SLL3 AIOPS solution enables VA to diagnose reasons Operation and Maintenance	Neither		
VA-540	ECG/EKG Machines- Interpretation of Result VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	This software aids with interpretation of clinical EKGs The system integrates w/ CPRS and outputs patient dem Operation and Maintenance	Both			
VA-544	Appointment Comments Categorization	VA	OIT: Office of Information & Health			None of the Above	To deliver additional timely options for patients that ar Right now, I'm focusing on alerting around mental health Acquisition and/or Development	Safety-impacting			
VA-659	TeraRecon	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-708	Ambient AI scribe	VA	VHA: Veterans Health Adm Health & Medical			Transcribing and summarizing a recorded meeting or interview using AI	Human scribes have been effective toward decreasing r The system produces written summaries of clinical ences Initiated	Both			
VA-790	Pension Optimization Initiative (POI)	VA	VBA: Veterans Benefits Adm Government Services (includes Benefits and Service Delivery)			None of the Above	VBA's POI is a transformative effort that seeks a Manag The following is high-level scenarios describe the inputs Operation and Maintenance	Rights-impacting			
VA-913	Limited Use of Azure Speech Services in PET VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	We have specific and limited use of Azure Speech ServoAudio verbalization (speak-aloud during telephone engs Acquisition and/or Development	Neither			
VA-954	Medallia SaaS - VSignaps and ESignaps	VA	VEO: Veterans Experience C Other	Medallia is a customer experience management platform for see above		None of the Above	Medallia is a customer experience management platform for see above	Operation and Maintenance	Safety-impacting		
VA-1069	AGFA Dose Monitor system	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-1114	Volpara Imaging Patient Hub	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-1159	Identity Governance and Administration IGS VA	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			Identifying unusual patterns in system logs from a single incident report using AI	The purpose and expected benefits of the AI are to red The system will display risk scores on a dashboard, send Acquisition and/or Development	Neither			
VA-1200	VET-HOME Contact Center AI	VA	OIT: Office of Information & Health			Searching for information using AI	We're looking to explore the use of AI to give VA custom We'd like to train custom co-pilots on data used by the t Initiated	Neither			
VA-1237	Beckam Coulter Dxi 800	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-1323	UIPath Document Understanding	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			None of the Above	The tool enables Optical Character Recognition and data UIPath's Document Understanding will provide compute Operation and Maintenance	Neither			
VA-1360	Potential Fraud or Waste	VA	OM: Office of Management & Mission-Enabling (Internal agency support)			None of the Above	The Purchase Card dashboards are a suite of dashboard The Advanced data Analytics module generates an expect Initiated	Neither			
VA-1442	Roche Digital Pathology	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	To aid pathologists in diagnosing pathology cases. It analyzes slide images to aid in diagnosing Acquisition and/or Development	Both			
VA-1475	Activity recognition using wearable sensors	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	To accurately recognize/classify a number of different c Described above. A classifier that categorizes r Acquisition and/or Development	Safety-impacting			
VA-1561	VCA & PPMS Chatbot	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			Searching for information using AI	The Network Support VCA & PPMS Chatbot, a virtual at The VCA and PPMS teams have compiled a wide range o Operation and Maintenance	Neither			
VA-1565	ApileMD eCART Clinical Deterioration Mode VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-1647	PINGOOD AI	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Educational informational app that uses a RAG model b Output is information that is related to the RAG model c Acquisition and/or Development	Both			
VA-1648	Perystat 14 EEG Review And Analysis Software VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Perystat EEG Review and Analysis Software provides The it uses prespecified but customizable parameters for Operation and Maintenance	Both			
VA-1684	Computer Aided Detection (CADe) of Neoplasms	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	GI Genesist™, a commercial product distributed by Medtrac The device physically connects to existing endoscopes, v Operation and Maintenance	Both			
VA-1729	Digipans	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Behavioral prediction model used to create clinical trial Output is behavioral analysis and predictions based on r Acquisition and/or Development	Neither			
VA-1766	TrueFidelity CT Deep Learning Image Recon VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Decreases noise in CT images	Operation and Maintenance	Both		
VA-1770	Pangaea	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Develop predictive model for chronic disease with trea Output will be identification of chronic disease in Vetera Acquisition and/or Development	Both			
VA-1803	AIDOC	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-1811	Cognitive	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Predict chronic disease	Output is based on Veteran profiles utilizing data model Acquisition and/or Development	Both		
VA-1815	Analytics, Data, and Decision Support Unfile VA	VA	OALC: Office of Acquisition & Other	Data Analysis		None of the Above	Using AI enhancements, this tool can quickly filter cent The system will output a list of contracts or line items b Operation and Maintenance	Neither			
VA-1848	GAO PreFund AI	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	FDA-cleared medical device to assist clinicians and impr Described in FDA documentation for this device (https:// Operation and Maintenance	Both			
VA-1897	VA Office of Information & Mission-Enabling (Internal agency support)	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			None of the Above	Purpose of the AI system is to predict the administrative The AI Model has two outputs. 1) Agency Owner with r Operation and Maintenance	Neither			
VA-1914	Circle CV42	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	This software is for improving efficiency in post process i It replaces manual contouring of different cardiac struct Operation and Maintenance	Neither			
VA-1918	National Cemetery Administration (NCA) Au VA	VA	NCA: National Cemetery Ad Government Services (includes Benefits and Service Delivery)			Ingesting large amounts of data from paper forms into a digital system using AI	The purpose of the AI is to automate aspects of NCA be The Hyperscience platform (optical character recognitio Operation and Maintenance	Rights-impacting			
VA-2008	VA CART Adenoma Detection NLF	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Extracts adenoma status for CART Veterans using Natu Results contain 0 for no evidence of adenoma or 1 for r Operation and Maintenance	Neither			
VA-2143	Call Center Knowledge Navigator	VA	VBA: Veterans Benefits Adm Mission-Enabling (Internal agency support)			None of the Above	Using VA-provided procedural reference material, the t The system will output a generated response to a user's Implementation and Assessment	Neither			
VA-2184	National Training Team Schools — FAQ DA VA	VA	VBA: Veterans Benefits Adm Mission-Enabling (Internal agency support)			None of the Above	The 1.0 dashboard clusters thousands of submitted qu Classification and sentiment score	Implementation and Assessment	Neither		
VA-2266	National Training Team Schools — FAQ DA VA	VA	VBA: Veterans Benefits Adm Mission-Enabling (Internal agency support)			None of the Above	The model should classify thousands of questions into c Classification, list of questions, answers to questions Acquisition and/or Development	Neither			
VA-2307	Audit of Service Contract Designations At VA	VA	VHA: Veterans Health Adm Government Services (includes Benefits and Service Delivery)			None of the Above	Reduction in waste, fraud and abuse.	Binar	Acquisition and/or Development	Neither	
VA-2336	PsychCorpCenter	VA	VHA: Veterans Health Adm Health & Medical			Searching for information using AI	The program is used to do multiculturally sensitive soc The information processed from the input of the provides Acquisition and/or Development	Both			
VA-2348	ReflexAI	VA	VHA: Veterans Health Adm Education & Workforce			None of the Above	AI-powered simulations to provide nuanced, high-qual AI Information is accessible for training staff within the Operation and Maintenance	Neither			
VA-2377	Prostate Cancer, Genetic Risk, and Equitable VA	VA	VHA: Veterans Health Adm Other	Research		None of the Above	This risk model is being used within the framework of a The risk model uses new participant data to output a ris Acquisition and/or Development	Both			
VA-2422	Using AI to enhance/augment classification VA	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			None of the Above	This system allows statisticians to identify trends and ar Argumented event type classifications	Initiated			
VA-2426	App Feedback model for NLP tasks	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Functional Overview: The objective is to utilize Natural L The objective is to utilize Natural Language Processing (f Operation and Maintenance	Neither			
VA-2430	TERA Memorandum Automation	VA	OIT: Office of Information & Government Services (includes Benefits and Service Delivery)			Searching for information using AI	Toxin Exposure Risk Activity (TERA) Memorandum Auto Toxin Exposure Risk Activity (TERA) Memorandum Auto Operation and Maintenance	Neither			
VA-2459	XtractOne	VA	VHA: Veterans Health Adm Law & Justice			None of the Above	The new WDS will allow the VA Police to centralize all p Extract One View is equipped with advanced analytical to Acquisition and/or Development	Both			
VA-2463	Using AI to weekly monitoring of any harm VA	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			None of the Above	This AI based monitoring system will be used to inform Classification of harm categories from LHM.	Initiated			
VA-2500	Podmetrics	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Our involvement with Podmetrics is limited to receive Our interaction with the Podmetrics platform is strictly Operation and Maintenance	Both			
VA-2504	Thematic Analysis of Chief Resident in Quali VA	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			None of the Above	The intended purpose of the AI is to perform a detailed The AI system's outputs will be categorized themes, pat Initiated	Neither			
VA-2508	My HealthVet VSignaps Main Improvement VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	My HealthVet is the VHA patient portal to access to re Veteran feedback is stripped of PII and then sorts comm Operation and Maintenance	Neither			
VA-2512	ESD-Speech Sentiment and Analytics	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			Transcribing and summarizing a recorded meeting or interview using AI	Utilizing AI to analyze speech sentiment of internal cust Various reports and dashboards for ESD leadership and t Initiated	Neither			
VA-2545	Privacy Act Automation Services - Disclosure	VA	VBA: Veterans Benefits Adm Government Services (includes Benefits and Service Delivery)			None of the Above	The FPA System will automate FPA workflows that are c The FPA system automates the process of ingesting PIA Implementation and Assessment	Neither			
VA-2549	Sentiment analysis for app feedback	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Functional Overview: The objective is to perform senti perform sentiment analysis on text reviews to classify r Operation and Maintenance	Neither			
VA-2553	ESD-Predictive Intelligence	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			None of the Above	The intended purpose is to leverage Machine Learning Outputs involve pre-populated assignment groups in tci Initiated	Neither			
VA-2582	AI Health Coach	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	The Health Coach and AI components are different. The The Health Coach has a pre-selected decision tree [ex d Operation and Maintenance	Neither			
VA-2623	Verathon Prime Plus	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	It's a bladder scanner. The AI component is used in rel; It outputs assisted measurements related to bladder siz Operation and Maintenance	Both			
VA-2672	App Feedback categorization mode	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Functional Overview: The objective is to categorize reviv The objective is to categorize review texts into specific c Operation and Maintenance	Neither			
VA-2713	LIHQ and LIHQ II Loop Recorder	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Implantable heart monitoring device. This continuously The information (recordings) are remotely transmitted a Operation and Maintenance	Both			
VA-2717	VA.gov Chatbot: Use of AI for summative an VA	VA	OIT: Office of Information & Government Services (includes Benefits and Service Delivery)			None of the Above	The VA.gov Chatbot currently uses Natural Language Input. Understanding user intent. Copilot can determine Operation and Maintenance	Neither			
VA-2754	JO PATCH HEART MONITOR	VA	VHA: Veterans Health Adm Health & Medical			Creating visual representations of data sets for reports and presentations using AI	Records the heart rate and rhythm for up to 14 days to N/A	Operation and Maintenance	Both		
VA-2758	Caller intent classification using Google Dial VA	VA	OIT: Office of Information & Government Services (includes Benefits and Service Delivery)			Searching for information using AI	This project is part of the Unified Communications goal Mainly conversational output. The Voicelock will act as a Acquisition and/or Development	Safety-impacting			
VA-2791	Ordr	VA	VHA: Veterans Health Adm Health & Medical			Searching for information using AI	Ordr SCE Analytics employs advanced artificial intelligence Only network device metadata is forwarded to the SCE / Operation and Maintenance	Neither			
VA-2795	Machine Algorithm for Report Surveillance	VA	DEHRM: Office of Electronic Health & Medical			Searching for information using AI	The purpose of the MARS tool is to identify ident user su The output of the system is a list of Serviceflow tickets t Initiated	Neither			
VA-2828	Pharmacy AI Managed Inventory System (PI VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	PHAMIS will be an AI-powered inventory management System outputs will include demand forecasting, procun Initiated	Safety-impacting			
VA-2836	Silverberry Surgery Planning AI	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Assist in planning and operations in the perioperative p Output will be multiple AI agents responsible for various Acquisition and/or Development	Both			
VA-2869	ICU CIS/ARK PDF Medical Entry and Clinical VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Extract clinical data elements from unstructured clinical data Extracted data elements in structured and semi-structu Acquisition and/or Development	Safety-impacting			
VA-2910	BlueTeam AI	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			Identifying unusual patterns in system logs from a single incident report using AI	BlueTeam AI enables network monitoring capabilities t The system outputs only approved data and data cate Implementation and Assessment	Neither			
VA-3004	CAWP Investigative, Analytics, and Reportin VA	VA	OAWP: Office of Accountal Mission-Enabling (Internal agency support)			Transcribing and summarizing a recorded meeting or interview using AI	We are in the initial phases of prototyping an audio tran Enhanced Analytics, Reporting, and Transcription Service Initiated	Neither			
VA-3033	Multi-Modal Digital Image Exchange - AI (MI VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	It creates an AI driven orchestration layer and generats The system will output the results of each model into a Acquisition and/or Development	Safety-impacting			
VA-3045	VA Supply Chain Knowledge Management D VA	VA	VHA: Veterans Health Adm Mission-Enabling (Internal agency support)			Searching for information using AI	The goal is to leverage already existing Power BI tools t This involves enabling a knowledge management strateg Acquisition and/or Development	Neither			
VA-3082	Clinical outcomes for asynchronous teleder VA	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	Determine clinical outcomes of patients with skin dis Classify dermatology progress notes into 6 classes: Res Acquisition and/or Development	Neither			
VA-3086	VA TryOpenAI	VA	OIT: Office of Information & Mission-Enabling (Internal agency support)			None of the Above	TryOpenAI aims to improve VA employee efficiency an Tasks pilot users use TryOpenAI for Writing Enhancem Implementation and Assessment	Neither			
VA-3119	Lysyn for Mental Health	VA	VHA: Veterans Health Adm Health & Medical			None of the Above	To improve fidelity to evidence based practices in Beha Lysyn uses AI algorithms to automatically generate clinic Operation and Maintenance	Neither
