Questions for SEISINT

1. We would prefer to transmit via a mainframe to mainframe connection because it is more secure than mailing cartridges. Is this a possibility?
2. It is possible that incorrect conclusions could be drawn from information we provide. How would situations like this be resolved if the inquirer were unable to interpret results?
3. Is there to be an initial load of data followed by monthly updates or do we send a complete file every month?
4. We need clearer definition for historical data. Registrations are annual (typically). Do we send historical records for each registration of the same vehicle?
5. What data elements or combinations are intended to be keys? Neither tag numbers nor VINs are unique. Is an inquiry expected to return only one match or a list of matches to be selected from? It would be helpful to understand what type of views into this data will be available. Would tag category be helpful?
6. Is address supposed to mean residence address?
7. We cannot provide sex, age, or SSN. We cannot always provide DL#.
8. Lien history may be incomplete in some cases, and there may be more than one lien holder. Do we only send the first lien holder? Also, we do not automatically remove a lien when it has been satisfied. We only do this if the customer requests and pays for it.
9. Is the description at the top of the report the same as the one under vehicle information?
10. What is the definition for title date? Date title was printed, or issued, or date vehicle was purchased?
11. What is the definition for decal date?
12. We think we need to add a title type code to help clarify assumptions that were made during conversion of the old tag & title systems into GRATIS.
13. We are assuming that our registration table would drive this extract process. But what about vehicles that are titled without registrations? This could include junkyard, backyard, up on blocks, and even dealer tags. And there are probably around 2 million of these.

Questions for Seisint

1. Social Security number was not collected as part of Driver's License Issuance before January 1, 2003. Should blanks be returned when SSN is not known? For issuance after July 1, 2003 SSN will be captured as all zeros if customer has a Letter of Denial issued by SSA. Should there be an indicator given to reflect that the customer has no SSN?

2. Which address is requested, mailing or residence? County of license would be county of mailing address.

3. Race is not always captured. Should blanks be returned when race is not known?

4. Request for DL type/ Motorcycle Code.....is this a request for License Class and Type codes?

5. What is DL Attention Flags?

6. For monthly updates should a complete record containing all fields be returned? ...or only the fields that changed?... or a record with old and new data entries? Are dates of last update needed?

7. DL number will not uniquely identify drivers....should driver identifier also be sent to provide updates to the correct driver record?
