Subject: Re: URGENT-PLATESCAN INSTALLATION SET FOR WEEK OF AUGUST 17th
Can we pay for the installation now with a guarantee that it will be completed at no additional cost later?

Only thing I would worry about is losing the grant funds before installation is made. We can handle however you want.

Subject: RE: URGENT-PLATESCAN INSTALLATION SET FOR WEEK OF AUGUST 17th

Hello Carol,

Due to the patent-infringement lawsuit against PlateScan, in which we have also been named, Plano is currently prohibited from installation or use of the PlateScan equipment we recently acquired. It has, however, been received here and is being stored for future use. I am not sure how we should handle the billing for installation at this point, since we will likely not be able to engage in this part of the process for quite some time; however, it should be okay to sign for the equipment itself. I am copying Ken Mackenzie for his input.

Thanks,

From: Carol Strickland [mailto:cstrickland@co.collin.tx.us]

Subject: FW: URGENT-PLATESCAN INSTALLATION SET FOR WEEK OF AUGUST 17th

Can you please confirm that the equipment installation has been completed on the Plano Police Vehicle? We would like to sign off on the PlateScan Purchase Order for payment. The servers and their installation are on different purchase orders.

Thank you in advance for your reply.

*Carol Strickland

Good Morning Everyone,

I am pleased to announce that we are ready to begin the PlateScan installation process for the ALPR vehicles. Collin County won't have the regional back-office server delivered until September, however Kelley and I decided that we didn't want to wait on the server, before we got the vehicles operational. The vehicles can hold their data for 30 days, so we shouldn't lose any data and it can be transferred to the server once it is installed.

The installation process will begin at the Collin County Shop, 700A Wilmeth Road on Monday, August 17th. They will be doing the installation on all six agencies vehicles that week. The Collin County Shop has given PlateScan after-hours access, so that they can get all six vehicles done that week. Knowing the average install time, they will probably work over the weekend and hopefully have the vehicles completed the following Monday.

To complete this task on time, we need for each agency to deliver their designated ALPR vehicle to the Collin County Shop no later than Friday, August 14th by 4:30pm. Please make sure that it is the same vehicle that you spec'd in the pre-planner. Any surprises will only slow down the install process. The actual shop is closed on Fridays, but the ladies in the front shop office will be there and will take your keys from you until 4:30pm on that Friday.. Liz Gray at the Shop is coordinating this for us, so if you have a question about delivering you vehicle, she should be able to help you. Her number is 972-548-3734.

Please take a look at the attached photos of the new cameras installed. I think you will all be pleased at the new low profile of the cameras and see that it was worth the wait, rather than getting the previous model cameras.

Start thinking about training. I have blocked off most of the week of August 24th to train all the Collin County Agencies. For the vehicle training, I will need a classroom with a projector for my laptop. Each class will take 1.5 to 2 hours and you can send as many officers as the room will hold. I can do a couple of classes for each agency to meet their shift requirements. For the back-office training for dispatchers,

investigators, crime analysts and anyone else that you want to have access, those classes only take about 30 minutes per class. The more classes I can do at one agency on one day, the more time it give me for the other five agencies. Don't worry though, we can do additional classes, as my schedule allows.

Please double-check this email to insure that I sent it to everyone at your agency that needs it.

As always, if you have any questions, feel free to call me at any time.

Subject: PlateScan Information needed by Friday, Aug 7th

Hello Everyone:

The PlateScan Installation is less than two weeks away and I just want to be sure that everyone got my last message about delivering your vehicles to the Collin County Shop by Friday, August 14th. Please confirm by email that your designated vehicle will be at the Collin County Shop on the 14th. PlateScan has slotted two weeks for this install, due to the number of vehicles.

We will be shipping all of the equipment to the Collin County Shop this Wednesday (Aug 12th), yet we are still missing some information from each of you. It is important that we have all of this information no later than Friday, so that Matthias in PlateScan Operations can insure that he ships everything that each vehicle will need. If there are any questions at all in reference to this, please feel free to email Matthias Jezek at mjezek@platescan.com or you can call him at 949-851-1600, ext. 23 and ask for Matthias.

Only Allen has responded to my request to schedule training. Please have someone from each agency email me at kmackenzie@platescan.com with some possible dates for training. I would like to do it as soon after installation as possible. This installers are allotting until August 28th, due to so many vehicles, so let's try to schedule training as close to that date as possible, so your department can get the vehicles into service as soon as possible.

For the vehicle training, I will need a classroom with a projector for my laptop. Each class will take 1.5 to 2 hours and you can send as many officers as the room will hold. I can do a couple of classes for each agency to meet their shift requirements. For the back-office training for dispatchers, investigators, crime analysts and anyone else that you want to have access, those classes only take about 30 minutes per class. The more classes I can do at one agency on one day, the more time it give me for the other five agencies. Don't worry though, we can do additional classes, as my schedule allows.

ALLEN PD:

Still need your color camera position sheet back.

COLLIN COUNTY S.O.

We have Mobile Planner, but the information about the light bar is missing.
 Also, still need the requested pictures of the designated vehicle.
 Need to schedule training days with Ken MacKenzie

FRISCO PD:

Still need your color camera position sheet back.
 Need to schedule training days with Ken MacKenzie

MCKINNEY PD:

Still need your color camera position sheet back.
Need to schedule training days with Ken MacKenzie

WYLIE PD:

Still need your color camera position sheet back.
Need to schedule training days with Ken MacKenzie

We just finished the install for the City of Austin and I thought you all might like to see how the new low profile cameras look on the patrol vehicles. You can barely see the cameras from the front.

REMINDER

The installation process will begin at the Collin County Shop, 700A Wilmet Road on Monday, August 17th. They will be doing the installation on all six agencies vehicles for the next two weeks. The Collin County Shop has given PlateScan after-hours access, so that they can get all six vehicles done. Knowing the average install time, they will probably work over the weekend and hopefully have the vehicles completed by the middle of the second week.

To complete this task on time, we need for each agency to deliver their designated ALPR

vehicle to the Collin County Shop no later than Friday, August 14th by 4:30pm. Please make sure that it is the same vehicle that you spec'd in the pre-planner. Any surprises will only slow down the install process. The actual shop is closed on Fridays, but the ladies in the front shop office will be there and will take your keys from you until 4:30pm on that Friday

Monday-Thursday, they should contact Bob Upchurch (972-548-3709) or Steve Roberts (972-548-3721). On Friday, they should contact Linda Smith (972-548-3701) or Tammi Koch (972-548-3719). The last two listed will be their contact to leave the car keys with on Friday.

Wireless Details:

The goal is to be able to wirelessly move the Platescan data from the vehicles into the BackOffice server, and also move the Department of Justice hotlist data from the BackOffice server into the vehicles.

1. Does your department currently have a 802.11 infrastructure?
If yes, what type?

802.11A in the SO (total of 4 in the garage)

2. Are you able to move data from the police vehicle to a centralized server?
Yes.

3. Are there any size or bandwidth limitations on the data that is able to move back and forth between the police vehicles and the server?
No. Limited to AP bandwidth. 1GB to the server

4. Are there any firewall limitations that would block certain types of traffic? (Like FTP, HTTP, etc.) No.

Back Office Server Specifications:

Any current 2.0+GHz CPU, 2+gig of RAM, Hard drive (20 gigs will support about 1 million license plates) 250gigs or more, this does not include any hard drive space needed for a RAID configuration or SQL backups.
Connectivity to your current network infrastructure. Windows Server 2000 or 2003 are supported. SQL Server 2000 and 2005 are supported.

. Please list the system specs for your BackOffice server, company and model number if applicable.

We are looking to use a blade and setup a SAN device 2. Will it be possible for the server to come pre-installed with the operating system, IIS, the SQL server and all the software updates before the Platescan Tech's perform the BackOffice install?

Yes.

3. Will the BackOffice server be able to periodically connect to an outside server in order to download the updated hotlist information?

Yes

Wireless Details:

The goal is to be able to wirelessly move the Platescan data from the vehicles into the BackOffice server, and also move the Department of Justice hotlist data from the BackOffice server into the vehicles.

1. Does your department currently have a 802.11 infrastructure?
If yes, what type?

802.11A in the SO (total of 4 in the garage)

2. Are you able to move data from the police vehicle to a centralized server?
Yes.

3. Are there any size or bandwidth limitations on the data that is able to move back and forth between the police vehicles and the server?
No. Limited to AP bandwidth. 1GB to the server

4. Are there any firewall limitations that would block certain types of traffic? (Like FTP, HTTP, etc.) No.

Back Office Server Specifications:

Any current 2.0+GHz CPU, 2+gig of RAM, Hard drive (20 gigs will support about 1 million license plates) 250gigs or more, this does not include any hard drive space needed for a RAID configuration or SQL backups.
Connectivity to your current network infrastructure. Windows Server 2000 or 2003 are supported. SQL Server 2000 and 2005 are supported.

Subject: PlateScan Pre-Planners

Gentlemen,

Sorry for the delay in getting this information to you. As promised, here are the user manuals for the PlateScan ALPR system and the PlateScan Connect back-office. I have also included a copy of the pre-planner for the installation of your ALPR system. Please read over the pre-planner and provide the required information. Once completed, please forward these to Kelley Stone with Collin County and cc: me. Collin County is ordering the 3+1 system (see attached diagram). This system included three infra-red/color cameras and one color camera. The infra-red/color camera units are usually installed on top of the light bar, covering the left traffic lane, the right traffic lane and the third camera is mounted on the right side of the vehicle as a parking camera, scanning vehicles parked 90 degrees to the camera. The color camera is then mounted on the inside of the vehicle either on the front windshield or the left rear deck. This is a preference issue. Many agencies have the color camera mounted on the rear deck to capture on-coming traffic that didn't have a front license plate. Since this camera is a color camera, it is unable to read after dark in this position. Many agencies also mount the color camera on the front windshield, usually mounted off the right visor. Used in this manner, the camera receives enough ambient lighting from the patrol vehicles front headlights to read vehicles in front of it at night. This camera can also be easily turned by the officer to cover the center lane, right lane and parallel parked vehicles. Covering the right traffic lane in this manner would give a department the option to move the right front infra-red/color camera to the left rear corner of the light bar to cover vehicles passing on the left or going in the opposite direction with no front license plate. Please give a lot of thought to camera positions and feel free to call me to discuss the pros and cons of each. Once you decide, please mark you camera locations on the attached blank vehicle diagram. If you have any other questions, please don't hesitate to call upon me.

Please complete as much information as possible.

IT Information

Please provide information for the following...

1. Agency Name / Address *COLLIN COUNTY SHERIFF'S OFFICE, 4300 COMMUNITY, MCKINNEY, TX 75071*
2. Primary Point of contact including phone and email for the IT staff.

Wireless Details

Please provide information for the following...

The goal is to be able to wirelessly move the Platescan data from the vehicles into the BackOffice server, and also move the Department of Justice hotlist data from the BackOffice server into the vehicles.

1. Does your department currently have a 802.11 infrastructure? *YES*
If yes, what type?
2. Are you able to move data from the police vehicle to a centralized server? *YES*
3. Are there any size or bandwidth limitations on the data that is able to move back and forth between the police vehicles and the server?
4. Are there any firewall limitations that would block certain types of traffic? (Like FTP, HTTP, etc.)

BackOffice Server Information

The BackOffice system is a centralized SQL and Web server that will store all of the Platescan recognition data. This will serve as a searchable database for all of the license plates read by the Platescan vehicles. The Officers will log onto the website hosted on the BackOffice server to search through this information.

Minimum recommended system specs for the BackOffice system:

Any current 2.0+GHz CPU, 2+gig of RAM, Hard drive (20 gigs will support about 1 million license plates) 250gigs or more, this does not include any hard drive space needed for a RAID configuration or SQL backups. Connectivity to your current network infrastructure. Windows Server 2000 or 2003 are supported. SQL Server 2000 and 2005 are supported.

1. Please list the system specs for your BackOffice server, company and model number if applicable.
2. Will it be possible for the server to come pre-installed with the operating system, IIS, the SQL server and all the software updates before the Platescan Tech's perform the BackOffice install?
3. Will the BackOffice server be able to periodically connect to an outside server in order to download the updated hotlist information?

PlateScan Mobile Deployment Planner

Please complete as much information as possible, as well as provide digital images of the vehicle to help us plan for the installation – there is a list of images we would like from you toward the bottom.

Agency Information

Please provide information for the following...

1. Agency Name / Address **COLLIN COUNTY SHERIFF'S OFFICE
4300 COMMUNITY AVE. MCKINNEY, TX 75071**
2. Primary Point of Contact including phone and email. **MAJOR CHUCK RUCKEL 972-547-5109
cruckel@collincountytexas.gov**
3. Point of contact(s) for technical information (computers, administrator rights, etc) and mechanical (wiring, electrical, etc). **CASEY STONE**
Please provide email, phone numbers, and best time to contact them.
4. Year, make, and model of the vehicle and agency ID for the vehicle. **2009 FORD CROWN VIC
48017**

Vehicle Details

Please provide information for the following...

1. Is the vehicle a Police Interceptor **YES**
If yes, does the vehicle have the Power Package (rear power access)? This can be located by opening the trunk of the vehicle and pulling away the carpet against the passenger side fender wall to expose a plastic box where red and black wires are attached to.
2. What other equipment is currently installed in the vehicle? **MDC, VIDEO CAMERA, RADIO**
(Makes and Models)
3. Is there a sliding shelf in the trunk? **NO**
If yes, is it full size/width?
4. Is there a spare in the trunk? **YES**
If yes, is the spare in the lower section or on the shelf above the fuel tank? Also, could it be removed or relocated? **NO**
5. Please provide the Make and Model of the Lightbar on the vehicle.
6. Does the vehicle have a central partition cage/barrier installed to isolate the rear seat? **YES**
7. Is there a Digital Video / Camera system installed in the vehicle? **YES**
If yes, please detail the make and model and location of internal cameras **L3, CENTER WINDSHIELD**
8. Are there any equipment / accessories attached or installed in the rear deck / parcel shelf? **NO**
If yes, please describe all in detail.
9. Please list any other items installed in the vehicle that may effect the installation process
(i.e. shotgun mount locations (other than between the front seats), special storage for boxes, special truck organizer, etc)
10. Mounting external cameras to the lightbar will occlude a portion of the lightbar. Can you provide a point of contact for reviewing and confirming installation position of the cameras on the vehicle?
(Please see photos on page 4 for more details / example installation) **MAJOR RUCKEL**

Connectivity

There are 2 methods of installation – standalone or client/server which is integrated into the vehicle's existing MDT / Hardware. Please provide the following information to assist with determining the best installation method.

1. Is there an MDT installed in the vehicle? **YES**
If yes, please detail the make, model, and whether the main box (containing the CPU, HDD, Ethernet port, etc) is located in the MDT mounted to the dash or separately in the rear
2. Does your department or agency assign MDT's (laptops) to personnel? Or are the MDT's (laptops or PC's) installed in, and dedicated to, the vehicle?
3. To require the ALPR system to integrate with your existing MDT, please provide full technical information on the system, including...
 - Computer Make & Model numbers
 - System configuration (Memory, HD space available, etc)
 - Network configuration (Wireless, NETMOTION, etc)
 - Operating System
 - Available Ethernet ports
 - Available USB ports
 - Software currently installed
 - Peripherals attached to the system

MDT information:

Make/Model of your MDT unit?

How old is the unit/system?

Processor speed

Memory size, and average amount of free system memory

Free hard drive space

Available USB and Ethernet port (yes or no)

Operating system (needs to contain the latest windows service packs and updates)

Any additional software on the MDT. (NetMotion, AirFortress, DeepFreeze, Anti-Virus, Firewall, etc...)

Hotlist Information

The DOJ only supplies us with California license plate information, if you are not in the state of California, where and how will you be receiving your hotlist updates.

We will need a copy of the hotlist file.

Are you able to transfer the hotlist file to the MDT (either a USB memory stick, which will be provided with the Platescan system, or through a wireless network)

If you are in the state of California, and you plan on using additional hot lists other than the ones provided to you by the DOJ, we will need a copy of those files as well.

Images of Vehicle

Where possible, please provide the following images of the vehicle that will have the ALPR system installed...

- Rear view of the vehicle with the trunk open.
- Close up of the components in the trunk with standard / required equipment in place.
If the vehicle is equipped with a sliding tray, please pull the tray out, showing all space and components.
- Picture of open space in trunk where unit could be installed
(Unit required 15"L x 10"W x 4"H for installation)
- Pictures of any accessories located on or around the rear view mirror, such as: review mirror LED flashers, cameras, etc.
- Center console area of the vehicle showing the MDT and surrounding area.
- Any equipment installed on the rear deck / parcel shelf, such as: rear deck flashers, cameras, radar, etc.

Installation Requirements

The following is a list of requirements for on-site installation. Please confirm that the following facilities / staff will be available during the installation...

1. Covered area / bay with electrical outlets.
2. Access to facilities and staff to be point of contact when on-site
3. Technical / IT staff member to co-ordinate installation on MDT (if required)
(Ability to login to existing Laptop/MDT to install software)
4. Fleet manager / Vehicle supervisor to sign off on installation & equipment positioning
5. Please indicate the time allowed from AM to PM that the installers will be allowed to work.

Please understand that nearly all departments and agencies have their own unique way of outfitting vehicles in the fleet. By answering these questions and taking detailed pictures of key areas, you are helping us to prepare for any conflicts or new devices that could possibly affect our install so that we may finish the install in an efficient and timely manner. If you have any questions, please do not hesitate to contact your Account Manager at any time.

Reference photos of previous installs.**- 10637 -**

Subject: North Texas Fusion Center Regional ALPR Database

Afternoon Caren:

Very good question on Shone's part. I think I mentioned in that first group meeting, that the Collin County Fusion Center Regional ALPR database will be one of the first of its kind and I am sure that you there will have to be some "finagling" with the set-up as we develop it. At that first meeting, I told you right up front that my background is Police and not IT, so this is way beyond my level of understanding. Luckily, PlateScan has some of the best IT people around. I am including Mark Kelly, our Chief Technical Officer and Marco Spretke, our IT Team Leader in these emails, so that they can chime in as needed, especially when I give erroneous information. Mark and Marco, this is definitely your clue to chime in now.

In that first meeting, we briefly discussed with Lanette, I believe, the logistics of getting the data from the ALPR vehicle at each department to the Regional ALPR database server at the Fusion Center. You mentioned that all the Collin County Agencies, with the exception of Wylie and Richardson were connected to the Collin County IT network via fiber-optic cable. I think you or Lanette advised that for Wylie and Richardson (and then future regional agencies participating in the program) they could do their uploads of scanned data for the regional database via the internet. I know we briefly discussed whether there would be a need by any of the agencies to have their own server. I know that Richardson and Plano already have ALPR servers, so I am guessing that they would probably maintain them and simply carbon copy the uploads to the Collin County database, but I could be completely wrong on that. As for whether or not, Wylie can simply task an existing MS-SQL server to send the data to the Fusion Center database or if they even need any server at all, I am going to waive that question to Marco and Mark to help answer.

Kelley, while we are thinking along these lines, we need to think about the updates of other databases besides the stolen vehicle database. We need to decided if they all get updated through the Fusion Center or if each agency updates their own. As we get further along, I suggest that you call for another planning meeting to insure that everyone is on the same page and have input into the design of the "Regional ALPR Database". If done right, it will be one of the best of its kind in the world.

Mark or Marco, please be sure to copy everyone on your response.

Subject: Automatic License Plate Recognition Project
Location: Collin County Homeland Security, 4300 Community Avenue, McKinney, Texas 75071
Start: Thu 1/22/2009 1:30 PM
End: Thu 1/22/2009 2:30 PM
Recurrence: (none)
Meeting Status: Meeting organizer
Required Attendees: rflores@cityofallen.org; trenshaw@friscotexas.gov; jbruce@friscotexas.gov; gward@friscotexas.gov; dkowalski@mckinneytexas.org; rredde@mckinneytexas.org; gregr@plano.gov; edd@plano.gov; barbaras@plano.gov; brushing@cityofallen.org; john.duscio@wylietexas.gov; scott.stowers@wylietexas.gov; Rick Allen; Chuck Ruckel; Ken Mackenzie; Leslie Harper; Jason Lane

As you are aware Collin County Homeland Security obtained a grant that was used to fund an automated license plate retrieval system for your agency. The systems are currently on order. The vendor has made several suggestions and has several unanswered questions that require that we get together as soon as possible in order to put these systems into use immediately after they are received. Please join us to discuss the ALPRS on Thursday, January 22nd at 1:30 pm at our office at 4300 Community Ave. Feel free to bring whoever you wish to the meeting.

Thank you,

Carol Strickland

All,

We are ready to move forward on the License Plate Recognition project. Please ask your IT department to answer the technical questions on the attached form and return to me as soon as possible.

Kelley
