Services

BOSS Law Enforcement Solution

The BOSS Back Office System Server provides administrative and data analysis functions for both mobile and fixed deployments of ALPR, and serves as a central repository where all data may reside and be used as a total population. BOSS was specifically designed to allow law enforcement to capitalize on the tremendous amount of data generated by [PAGIS](#) (for mobile applications) and [Spike+](#), the integrated camera/processor system for fixed applications.

BOSS includes Administration utilities for [PAGIS](#) and BOSS allowing customization of screens, setup of users, and specification of databases to compare against. Perhaps the most powerful application of BOSS is its data mining capability...you can locate and map hits based on a wide range of criteria including partial plates, street address, GPS coordinates, time and date.
