(U) (Technical Character): During this part of our trip we will compare and contrast the analytical and technical work roles and provide you with a basic knowledge of the two distinct areas. This will serve as an introduction to the more role-specific module you will complete later.

- (U) This module will enable you to:
  - (U) Compare and contrast the analytical and technical work roles
  - (U) Identify analytical and technical personnel's authorization to touch the data
  - (U) Identify how the authorities impact interactions with other roles and the data

Derived From: NSA/CSSM 1-52

(TS//SI//NF) (Technical Character): As we have discussed throughout the course, the sensitivity of the data drives many of the policies and restrictions that control access to the BR and PR/TT bulk metadata. However, because of the different roles and responsibilities of analytical and technical personnel, both have different authorizations to touch the metadata. Recall from Module 1 we defined "touching the data" as any form of data handling that creates an opportunity for a violation of the FISC Orders to occur. These activities may include data acquisition, modifying/preparing the data, querying, viewing results of the queries, and even oversight and compliance functions.

Analytic Personnel Info (audio file name OVSC 1205 M5 5040 A):

(TS//SI//NF) (HMC Character): Analytic personnel have authorization to touch the metadata to perform intelligence analysis. Analyst actions, such as querying the metadata for intelligence analysis purposes, must be done in a controlled way via tools designed to limit intelligence analysis access to RAS-approved identifiers and to the appropriate number of hops. Using these tools also provides reasonable assurance that these queries are tracked and

audited.
Technical Personnel Info (audio file name OVSC_1205_M5_5040_T): (TS://SI://NF) (Technical Character): Technical personnel create, test, and implement tools to make this data easier for analytic personnel to use, while validating that safeguards appropriately control analysts' access to the bulk metadata. Additionally, technical personnel may access the metadata to perform those processes needed to make the metadata usable for intelligence analysis. These processes may include metadata validation; the defeat of the collection, processing, or analysis of metadata associated with
(TS//SI//NF) In order to do this work effectively, technical personnel are allowed to access the metadata using identifiers that are not RAS-approved. In the case of identifiers, technical personnel may use non-RAS-approved identifiers to query the metadata to confirm if the identifier is a identifier and thus should not be included for target analysis. They may then share the identifier and the fact that it is a identifier with authorized personnel. However, no other information resulting from such queries can be used for intelligence analysis purposes.
(TS//SI//NF) Technical personnel must take great care with their responsibilities because they may be accessing the data through tools that do not have safeguards, such as that impose restrictions and minimize the chances of a violation of the FISC Orders. As a result, we need to maintain
boundaries between technical and analytical personnel, and be crystal clear as to the circumstances under which the two groups can interact.

FRAME ID: 5050  NEXT FRAME ID: 5060	(U) Interaction Between Analytical and Technical Personnel  (U) (Begin with image of analytical and Technical Character sitting at a table, then provide a close up of the Technical Character)  (TS//SI//NF) All interactions must be based on RAS-approved identifiers and those results found within the number of hops authorized for intelligence analysis purposes							
BACK FRAME ID: 5040								
ALT TAG:								
GRAPHIC/AV: (U) Insert image of HMC Character and Technical Character sitting at a table								
(TS//SI//NF) (Technical Character): As we just discussed, analytical and technical personnel have different authorizations to touch this metadata. Because of these different authorizations, we must be careful when the two types of personnel are interacting with regard to this metadata. Specifically, outside of the sharing of identifiers for defeat purposes, technical personnel should only be providing analytical personnel information under certain conditions.								

(TS//SI//NF) (HMC Character): Sometimes, when analyzing the results of intelligence analysis queries, one or more of the specific results may seem out of the ordinary. Is it a distribution identifier that was overlooked? Is the identifier misnormalized? Is there something that just seems out of place? Or perhaps there is a particular data field in your results that you don't understand. In such instances, intelligence analysts may require assistance from certain technical personnel responsible for data integrity functions.

(TS//SI//NF) (Technical Character): In these instances, technical personnel may assist authorized intelligence analysts, but any and all assistance must be based on RAS-approved identifiers and those results found within the number of hops authorized for intelligence analysis purposes. Essentially, when providing information to analytical personnel in these circumstances, the technical personnel must abide by the rules for the analytical personnel.

(TS//SI//NF) (Technical Character): In the end, all personnel have a vested interest and shared responsibility in ensuring that only the most accurate intelligence information is reported to customers, while abiding by the policies and requirements in place for this metadata.

(U) (Technical Character): Let's make a few notes in our travel journal and see what we remember from this topic.

## ANSWERS:

Question 1. (TS//SI//NF) Correct! The answer is b) FALSE. Technical personnel have authority to make the metadata usable for intelligence analysis, while analytical personnel can only touch the bulk metadata for intelligence analysis purposes using RAS-approved identifiers within the authorized number of hops.

(<del>TS//SI//NF</del>) Incorrect. The correct answer is b) FALSE. Technical personnel have authority to make the metadata usable for intelligence analysis, while analytical personnel can only touch the bulk metadata for intelligence analysis purposes using RAS-approved identifiers within the authorized number of hops.

Question 2. (TS//SI//NF) Correct! The correct answer is c). The Analytical Work Role includes analysts and Homeland Mission Coordinators (HMC). (TS//SI//NF) Incorrect. The correct answer is c). The Analytical Work Role includes analysts and Homeland Mission Coordinators (HMC).

Question 3. (TS//SI//NF) Right! The correct answer is d). The Technical Work Roles are comprised of two general areas of support including collection and metadata as well as storage, presentation, and maintenance of the metadata.

(TS//SI//NF) Incorrect. The correct answer is d). The Technical Work Roles are comprised of two general areas of support including collection and metadata as well as storage, presentation, and maintenance of the metadata.
