I do not want you to follow up on this. We will deal with this as the NSI PMO.

I agree. That's why I sent the "heads up". I will get the details. In the meantime, I suggest we get our facts together

I do not want to address this third party. If there is an issue it should come to us not a contractor at PM-ISE.

I want to know who has an issue and what the conditions are surrounding the problem. If there is one.

[REDACTED] this should not be discussed with [REDACTED] but the person having the issue or eG themselves should come to us.

Subject: eGuardian data issue

David

I got a call from [REDACTED]. Apparently the second issue that [REDACTED] wanted to discuss last week has bubbled up. Someone at the FBI claims that NSI users can not view all of the data that eGuardian has pushed to the Shared Space. [REDACTED] called me because of a positive relationship we have on this project.

I discussed with [REDACTED] this afternoon. Here are the possible conclusions.

1. Possibly, the FBI user does not realize that the "+" symbol associated with several screen elements on the detail results page

(NCIRC Search) identifies additional information (multiple people, vehicles etc).

2. There may be some fields stored in the Shared Space database that are not presented on the screen displays (we need to do a little more research here)

3. The eGuardian team may not have actually pushed some data from eGuardian to the staging area on the Shared Space that we use as our source for data ingest. The staging area was developed by the eGuardian team [REDACTED] based on their sense last summer of what SAR data they would "expose" to the Shared Space. We did not have an opportunity to discuss this policy other than to understand the codes and values presented to us. So there may be some assumptions on the eG side that need to be clarified.

4. Data on weapons and of course attachments and documents associated with the eG data are not included in the Shared Space. We had proposed that weapons be added to ISE-SAR V 1.5, but it was denied. As for attachments, a decision was made to not include them in the SAR EE application. This feature will be added in a future release (but likely not communicated to the FBI)

Since this has reached the PM-ISE level, I think we need to discuss with Joe when he returns as well as verify point #2) ASAP.
