Subject: Update on DCMPD

We had an excellent session today with reps from the FC, MPD IT and importantly the 911 folks. Lots of good interoperability discussion, and I think an enthusiastic agreement that MPD, 911 Dispatchers, Fire, Ems, ETC are all in this game and that DCMPD needs to move forward on a solution that capitalizes on current investments – or cut losses that exist.

After the AM meeting that included a demo of the SVT and screen shots of the NSI Search Tool, [REDACTED] and I met with the MPD CIO and Deputy in the PM.

Their recommendation from DCMPD IT were as follows:

1. Establish MPD FC accounts to allow MPD access to the Search tool (I have a new list of users after discussing with FC Director)
2. Install the SVT with Test data (will be accomplished tomorrow). IJIS to arrange for Training in next 2 weeks.
3. Recommend that eGuardian be used to enter SARs for the next few weeks as necessary.
4. Engage Intergraph ASAP to discuss the NSI project and data exchange standards. Note: Intergraph was selected by MPD to provide a new RMS capability to replace the failed AMS project. We have an opportunity to educate them on the NSI and hopefully have them accommodate NSI data needs within their system.
5. Initiate discussions with Fire, EMS and (i.e. Staff to look at ways to automate SAR reporting.

Bottom line: Because DC has eG access, based on what we told today, they are already operational with the NSI. Over the next few weeks we can explore alternatives that they clearly want to address from an all-crimes position.
