Subject: RE: Assessment of the DC FC and EGuardian

b(6)

If she has a SWAG that would be helpful.

Thanks [REDACTED] Following Tom's and Dave's review, we should be ready to provide support and/or suggestions.

Is the required code development something we could estimate scope and/or value to potentially recruit a provider to contribute resources to coordinate (perhaps thru IJIS)??

Thx.

Subject: Assessment of the DC FC and EGuardian

Tom and [REDACTED]

Here is a quick assessment of the FC meeting today.

At the beginning, I thought it went well because the EGuardian was supportive of the FC. However, David Lewis said that this is a different story than what he heard from the FBI since yesterday. EGuardian (FBI) claimed that they could accept NIEM conformance document from the DC FC, but David thinks this is not true because the FBI does not even have the SAR IEPD.

[REDACTED] DC FC Director, indicated they will use SAR and that there is no doubt that they will need to communicate with EGuardian. They needed assistance from information sharing community and the FBI. EGuardian has not even looked at the SAR IEPD and the DC FC just got the Functional Specification last week. No one has even done the mapping of EGuardian data elements to SAR IEPD. According to the David, the schema will be a super set of the

current SAR. The RMS people are 70- 80% completed with the SAR process. The FC is concerned with the privacy issues since EGuardian is unclassified with law enforcement sensitivity. The two agencies do not a ConOps.

██████ has short-term and long-term concerns. The short term is to have these two agency share data before the Jan. 2009 (Inauguration's Day specifically) and the long-term is to then share data seamlessly with other agencies. If all the technical solutions are not in place, then the backup plan for Jan. 2009 is for the FC to manually enter data into EGuardian.

Somehow David thought that I could write code to extract data from the DC RMS and give it the FBI. I think that was a misunderstanding since I do not have the cycle for it. It also been a while since I last wrote code and I think he understood it. I could provide technical guidance on NIEM conformance, XML, SOA, etc.

It was difficult to know who represented which side since missed the introduction. I had a difficult time getting into the building and finally arrived 5 minutes late to the room. The meeting started on time. ██████████ was the only contact I was given to get an escort, but he was not in his office and did not answer his cell phone.
