B. eGuardian		
eGuardian is the unclassified version of Guardian. eGuardian will facilitate the sharing of information between local, state, tribal and federal law enforcement agencies with JTTFs, Fusion Centers, and Regional Intelligence Centers.		
eGuardian will make threat information immediately available to authorized users of Law Enforcement Online (LEO), as it currently holds Special Interest Group (SIG) status on LEO. eGuardian will assist the user in introducing data into the		b7E
system in a uniform manner, which will greatly enhance subsequent searches, allowing users to search universally for trends and patterns. Incidents created in eGuardian may be directed to the classified Guardian system for further		
investigative follow-up. There will be a point-of-contact (POC) for all Fusion Centers and JTTFs within eGuardian. The workflow process will help to ensure that no suspected terrorism incident is left unaddressed. eGuardian is meant to	ži.	¥1
supplement and enhance, not replace existing Fusion Center/JRIC and JTTF coordination. Urgent law enforcement matters, investigative issues, and classified matters should		
provide police departments, who are in states that do not have a formal fusion		3
process, a forum to participate in the fight against terrorism.

B. eGuardian Currently eGuardian is in the development stage with	th	,
initial limited deployment to select law enforcement agencies/Fusion Centers scheduled for the last quarter of 2007. As of the submission of this communication, plans are for TMU personnel to visit and provide eGuardian orientation having FBINET connectivity. A computer-based training module will be developed and deployed onto the LEO network to address any immediate training/familiarity needs of the state and local law enforcement community as a whole until TMU training staff arrives.	₩3.

and educational resources for eGuardian training in order to prepare the target user groups for the deployment of the system. Prior to release date, TMU anticipates the need for orientation, seminars and other presentations which would facilitate system expertise for each new user in local, state, tribal and federal law enforcement agencies. Groups including JTTFs, Fusion Centers, Regional Intelligence Centers and other major police/sheriff's offices across the country such as LAPD, Chicago P.D. and NYPD, are expected to apply for access in large numbers.
