Subject: eGuardian data analysis

Tom, David

Just a heads up. We are looking into some truncation errors on the eGuardian load that were observed on Friday. It's a situation where we designed and tested the ETL load application based on test data provided by the FBI. However the "live" eGuardian data loaded last Thursday is slightly different and some text strings were truncated. This is not hard to fix but we need a little time over the next couple of days to make sure the mapping is correct. We will send a revised file to eGuardian who then can load it on to their server. We are also waiting on the FBI to provide us with a logo and POC info for the detail search results pages. Note, until we get to OK from you, we will not allow any FC to access the eGuardian Shared Space.
