Scope:

X

(S)

Information is current as of 23 October 2009.

(U//FOUO) The following data sets and intelligence products were reviewed in preparation of this report:

- 2000 US Census data regarding foreign born populations
- FBI Atlanta Reporting
- Interviews of FBI Atlanta agents, supervisors, and analysts
- US Intelligence Community reporting
- Atlanta Division's Counterintelligence Program Threat/Vulnerability Assessment

(S)

(U) Confidence Levels Defined

(U) This Intelligence Note is supported by information that varies in terms of scope, quality, and sourcing. Consequently we ascribe high, moderate, and low levels of confidence to our assessment. Confidence levels, as defined by the National Intelligence Council's National Intelligence Estimate are:

(U) High Confidence generally indicates that our judgments are based on high quality information and/or that the nature of the issue makes it possible to render a solid judgment. A "high confidence" judgment is not a fact or a certainty, however, and such judgments still carry a risk of being wrong.

(U) Moderate Confidence generally means that the info is credibly sourced and plausible but not of sufficient quality or corroborated sufficiently to warrant a higher level of confidence.

(U) Low Confidence generally means that the information's credibility and/or plausibility is questionable, or that the information is too fragmented or poorly corroborated to make solid analytic inferences, or that we have significant concerns or problems with the source.
