

Serial Description ~ Unrecorded Serial

Figure 1 consists of four schematic diagrams labeled (a) through (d), each showing a different type of polymerization. (a) Linear polymerization: A single horizontal chain of circles connected by lines. (b) Branched polymerization: A main horizontal chain of circles with several side chains branching off at various points. (c) Cross-linked polymerization: A network of circles connected by horizontal and vertical lines, forming a grid-like structure. (d) Graft polymerization: A main horizontal chain of circles with several side chains branching off at regular intervals.
