

Questions to Inform CVE Review Team Discussion

21 September 2015

Per the proposed structure:

- Have the functional areas (blue boxes) been identified?
- Have the associated task areas (white boxes) been identified?
- What task areas are missing? What task areas should be moved around?
- Is the functional area *Engagements and Technical Assistance* too large for a single lead? Should this be broken out to two functional areas or should there be two assigned functional chiefs?
- Would the “Research and Analysis” include coordination of analysis done at state and local Fusion Centers (sponsored by DHS) and by academic researchers funded by the federal government (e.g, NIJ-funded research, DOD Minerva-funded research, etc)?
- Assuming the leadership-level Public Affairs provides PA support on behalf of the Task Force and does not coordinate PA actions of D/A CVE activities, do we need to add Public Affairs coordination to the Communications function?

Broader Questions:

- What is the top level management of the organization and rank?
- Should there be a rotating lead? (Every two/three/four years?)
- For how long will the body exist? Is there a sunset/under what conditions?
- To whom does this body report? (NSC?)
- How is the body empowered? Via PPD-1? Does it derive authorities from the hosting D/A?
- What are the requirements/asks for participation by the non-traditional D/As (e.g. Education, HHD, Labor, HUD)

- Does the body coordinate for task or coordinate for effect?
- Is the body operational or coordinating or a combo?
- Does the body influence how money is provided to local partners? Or does it direct local partners to the appropriate D/A for support?

For Monday's Discussion (not to be answered in advance)

What are the administrative/logistical requirements for this body?

- Offices/Cubicles
- Computers/Phones
- D/A specific Communications Requirements
- SCIF
- Travel Expenses, etc.
- Parking
- Clearance level for all chiefs and above?
- Credentialing by multiple D/As?
- Domain Level Access: Unclass, Secret, Top Secret
- Specific System Requirements (ex. HSDN vs SIPR vs FBIInet)
