All this means is that connectivity was established and that a user could check the eGuardian box on the search screen and search the eGuardian shared space. I suspect that FBI security has now disabled the VPN. It will not be turned on until the vulnerability study is completed and the system "passes". I guessing about 2 weeks. The operational demo of search will show the eGuardian checkbox but it will be grayed out indicating that it is not available.

Things seem to be working OK. [REDACTED] at FBI told me that Security staff is now running their scans to look for vulnerabilities. [REDACTED] indicated that the security report takes about two weeks. If vulnerabilities are found then his team will have to fix them before they can turn the system on.

**Subject:** eGuardian to SAR Portal Search

All,

[REDACTED] and the FBI have gotten the connection working and we are now able to search the eGuardian shared space. Tetris and IIR accounts can now check the eGuardian box in preview and production to do searches.

Thanks!
