Hi David,

Just to give you a bit of background, this document was developed by IJS and went through an expedited q/c process prior to the Fusion Center Technology Workshop in January. The document has been approved by Global and is posted on the IT.OJP.GOV web site (we were doing a final review for printing and wanted to check about the eGuardian verbiage). With your concern about the word "facility," should the document be taken down from the web site until you have a chance to revise the language?

Thanks,
[REDACTED]

[REDACTED]

I'm concerned about the word "facility" at the beginning and I'm not sure what the intention of the line is here. Also, the shared spaces user interface is not accessible by eGuardian. I will work on this and try to get something back to you tomorrow.

David

Hi David,

Below is the revised language for the ISE Shared Space section. We wanted to let you review the revised language before we print.

ISE Shared Space

The purpose of this facility is to provide authorized users with a mechanism for the collection, storage, and management of information relevant to terrorism information. The ISE Shared Spaces concept is a key implementation approach for developing trust and communitywide information sharing across the entire ISE. ISE Shared Spaces are networked data and information repositories used to make standardized terrorism-related information and applications and services accessible to all ISE participants. The ISE Shared Spaces

concept is utilized in the Nationwide Suspicious Activity Reporting (SAR) Initiative (NSI). The NSI creates a standardized, integrated approach to gathering, documenting, processing, analyzing, and sharing information about suspicious activity that is potentially terrorism-related. Users may access the NSI's ISE Shared Spaces through a designated server located at their fusion center or via the FBI's eGuardian system.

Thanks!

Subject: Re: fusion center technology guide pdf

I would say it should be mentioned as part of the NSI and not something separate.

Hi gentleman. Can you advise if you would like to add something into the Technology Guide on eGuardian. Thanks!

Hi Tom and David.

Our graphics team is readying the *Fusion Center Technology Guide* for outside printing and when I reviewed it I noticed something that we may want to modify before it goes to final print. Please look at page 14 under Section 4.3 Shared Spaces. An excerpt of the section is also below for your review. Should we add eGuardian as a separate item or at a minimum add some text about it to the ISE Shared Spaces write-up?

Thanks, and I look forward to hearing from you. [REDACTED]

4.3. Shared Services

The technology components listed in this tier offer a basic list of some of the shared services that support generalized functions, as well as provide the required operating and data sharing foundation for capabilities to be implemented.

ISE Shared Space

The purpose of this facility is to provide fusion center analysts with a facility for the collection, storage, and management of information relevant to intelligence cases. The ISE Shared Spaces concept is a key implementation approach for developing trust and communitywide information sharing across the entire ISE. ISE Shared Spaces are networked data and information repositories used to make standardized terrorism-related information and applications and services accessible to all ISE participants (across the law enforcement, intelligence, homeland security, foreign affairs, and defense communities).

National Crime Information Center (NCIC)

The purpose of this facility is to provide fusion center analysts with a facility for making an inquiry and for prompt disclosure of information in the system from other criminal justice agencies about crimes and criminals.

National Data Exchange (N-DEx)

The purpose of this facility is to provide fusion center analysts with a facility to detect relationships between people, places, things, and crime characteristics; to link information across jurisdictions; and to "connect the dots" between apparently unrelated data without causing information overload. This capability will occur primarily in the realm of structured data but can also include unstructured data.

Terrorist Screening Center (TSC)

The purpose of this facility is to provide fusion center analysts with a facility to query a database of identifying information about those known to be or reasonably suspected of being involved in terrorist activity.
