WILLOWVIXEN

WILLOWVIXEN is a technique that permits exploitation by having the target browse to a website by clicking on a link in an email that we sent. The WILLOWVIXEN server receives the contact from the target and performs a redirection.
SECONDDATE

- SECONDDATE is an exploitation technique that takes advantage of web-based protocols and man-in-the-middle (MitM) positioning.

- SECONDDATE influences real-time communications between client and server and can quietly redirect web-browsers to FA servers for individual client exploitation.

- This allows mass exploitation potential for clients passing through network choke points, but is configurable to provide surgical target selection as well.
