Exhibit P

Case 2:15-cy-20286-JLQ_Document_175-16_, Eiled_05/22/17

President George W. Bush (during a spring 2002 address to West Point graduates) Executive Summary In the War on Terrorism, the USG has detained or are planning to detain numerous unlawful combatants (DUCS) whom we believe have direct knowledge of Al-Qa'ida's plans to harm the United States and its citizens. These DUCS have variskills incountering interrogation ranging from no training to highly sophisticated train counter-interrogation. Direct access to these DUCS provides the USG with a unic opportunity to obtain actionable intelligence to disrupt Al-Qa'ida's plans, and confict their worst threats before the threats emerge. The Directorate of Science and Technology's Office of Technical Service (OTS) stands ready to assist CTC with developing and deploying an advanced interrogation capability to exploit DUCS in currently in custody as well as future detainees. Requirement: The USG needs to obtain a higher volume of relevant, actionable intelligence from DUCS, and to obtain this intelligence faster than current capability permits. If cannot exploit DUCS faster than current capability permits, then we risk missing hig valuable, time sensitive intelligence that could prevent another disastrous terrorist att against the Homeland. The recent Pedilla apprehension validates the logic of our proposal. In our discussions with CTC, the number of currently held DUCS and those are being targeted for capture is substantial and beyond the Agency's current capacity exploit. In addition to the referenced request from CTC/Appendix A contain additional listing of terrorists who believe have actionable intelligence and thus meet threshold for interrogation now.	In the War on Terrorism, the USG has detained or are planning to deta numerous unlawful combatants (DUCS) whom we believe have direct knowle Al-Qa'ida's plans to harm the United States and its citizens. These DUCS has skills in countering interrogation ranging from no training to highly sophistica in counter-interrogation. Direct access to these DUCS provides the USG with opportunity to obtain actionable intelligence to disrupt Al-Qa'ida's plans, and their worst threats before the threats emerge. The Directorate of Science and Technology's Office of Technical Service (OTS) stands ready to assist CTC we developing and deploying an advanced interrogation capability to exploit DUC currently in custody as well as future detainees. Requirement: The USG needs to obtain a higher volume of relevant, actionable intelliform DUCS, and to obtain this intelligence faster than current capability permits and exploit DUCS faster than current capability permits, then we risk missivaluable, time sensitive intelligence that could prevent another disastrous terro against the Homeland. The recent Pedilla apprehension validates the logic of oproposal. In our discussions with CTC, the number of currently held DUCS and are being targeted for capture is substantial and beyond the Agency's current of exploit. TOP SECRE		VORODN//VI
TOP SECRE	Q	YOFORN//X

The Office of Technical Service and the Directorate of Science and Technology stands ready to assist CTC with developing, training and deploying the advanced interrogation capability outlined in this document. Specific support includes:

- Assisting CTC's Renditions Group (CTC/RG) to develop an interrogation program;
- Facilitating the smooth transfer of OTS/OAD's interrogation support to CTC/RG;
- Identifying staff officers who have the skills to perform interrogation; and
- Provide long-term assistance by performing on DUCS.

Legal:

(Principles and guidelines for our authority to conduct interrogation)

Policy Issues:

(Suggested level of briefing, update DOI's and public policy)

Due to the potential legal, policy and political issues associated with CIA conducting interrogation, this function should be centralized within CIA. CTC/RG was recently tasked by C/CTC to take the lead on interrogations. The Agency's authority for interrogating DUCS under CIA control derives from our mandate to collect actionable intelligence. An updated DOI outlining the DO's authorities, including those delegated to the COB, should be a made a priority.

Our baseline guidance defining acceptable interrogation techniques originates with the legal interpretation outlined above and DoD/JPRA's training MO. Part of JPRA's formal policy is to have a qualified SERE Psychologist monitor the interrogation process to insure an interrogator does not exceed his/her authorities. Proper training on the legal and policy issues associated with the Agency's interrogation program must be made mandatory for all officers associated with this effort: Ensuring that an interrogator does not exceed the policy constraints or the legal definition of torture must be a primary management focus. Specific targets for our interrogation teams will be those DUCS who use resistance and counter-interrogation techniques, and whom we believe possess specific, time sensitive threat information against the United States, its citizens, and other countries.

Capability:

CTC, with the assistance of the Office of Medical Services, Office of Security, Office of Technical Services and various Mission Support Offices employs a highly talented team that is currently interrogating a senior Al-Qa'ida terrorist Abu Zubaydah;

	Current and projected requirements indicate that at least two additional interrogation teams are needed to work against those DUCS trained in counter-interrogation methods. Each CIA team will receive the interrogation methodology training and will deploy to the field together. Since the interrogation methodology and psychological pressures used against each DUCS is individually tailored, the skills possessed by experienced SERE psychologists and interrogators be key to designing each individualized interrogation strategy. The personnel compeach team will come from CIA's staff officer and contractor base. The core and ma	rising
	team compositions are:	mived .

DoD/JPRA

- 1. All members should first be trained to resist interrogation. This would provide team members with perspective on what it is like to be held captive and provide them with experience using the techniques likely to be employed against them. In essence, this would provide a users perspective. In my view, this block should include a classroom portion and a lab where team members could gain experience applying these techniques in a realistic, but safe, controlled environment. The topics covered should include a review of resistance techniques, strategies for employing these techniques, the psychological aspects of captivity, methods of covert communication used in captivity situations, and assessing captors.
- 2. Members should then be familiarized the specific resistance strategies and techniques likely to be employed by al-Qa'ida. This block of training would draw on what we know from captured manuals and our experience here. It would include a review of the strategies and techniques included in their training programs, psychological aspects of their resistance training, and the influence of Arab culture on the employment of resistance techniques.
- 3. Members should also be trained to recognize and develop countermeasures for resistance techniques. This block would build on previous training and focus on strategies and techniques for assessing the vulnerabilities and strengths of individual detainees, developing interrogation strategies tailored to the vulnerabilities, strengths and resistance strategies employed by specific detainees, the effects of different questioning techniques on resistance, use of psychological pressures, and assessing the effectiveness of countermeasure efforts.
