Good Morning,

It was good to touch base with you again. I verified with my supervisor that there were no issues sharing the route map with you so I have attached it here.

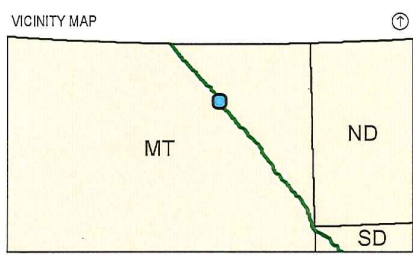

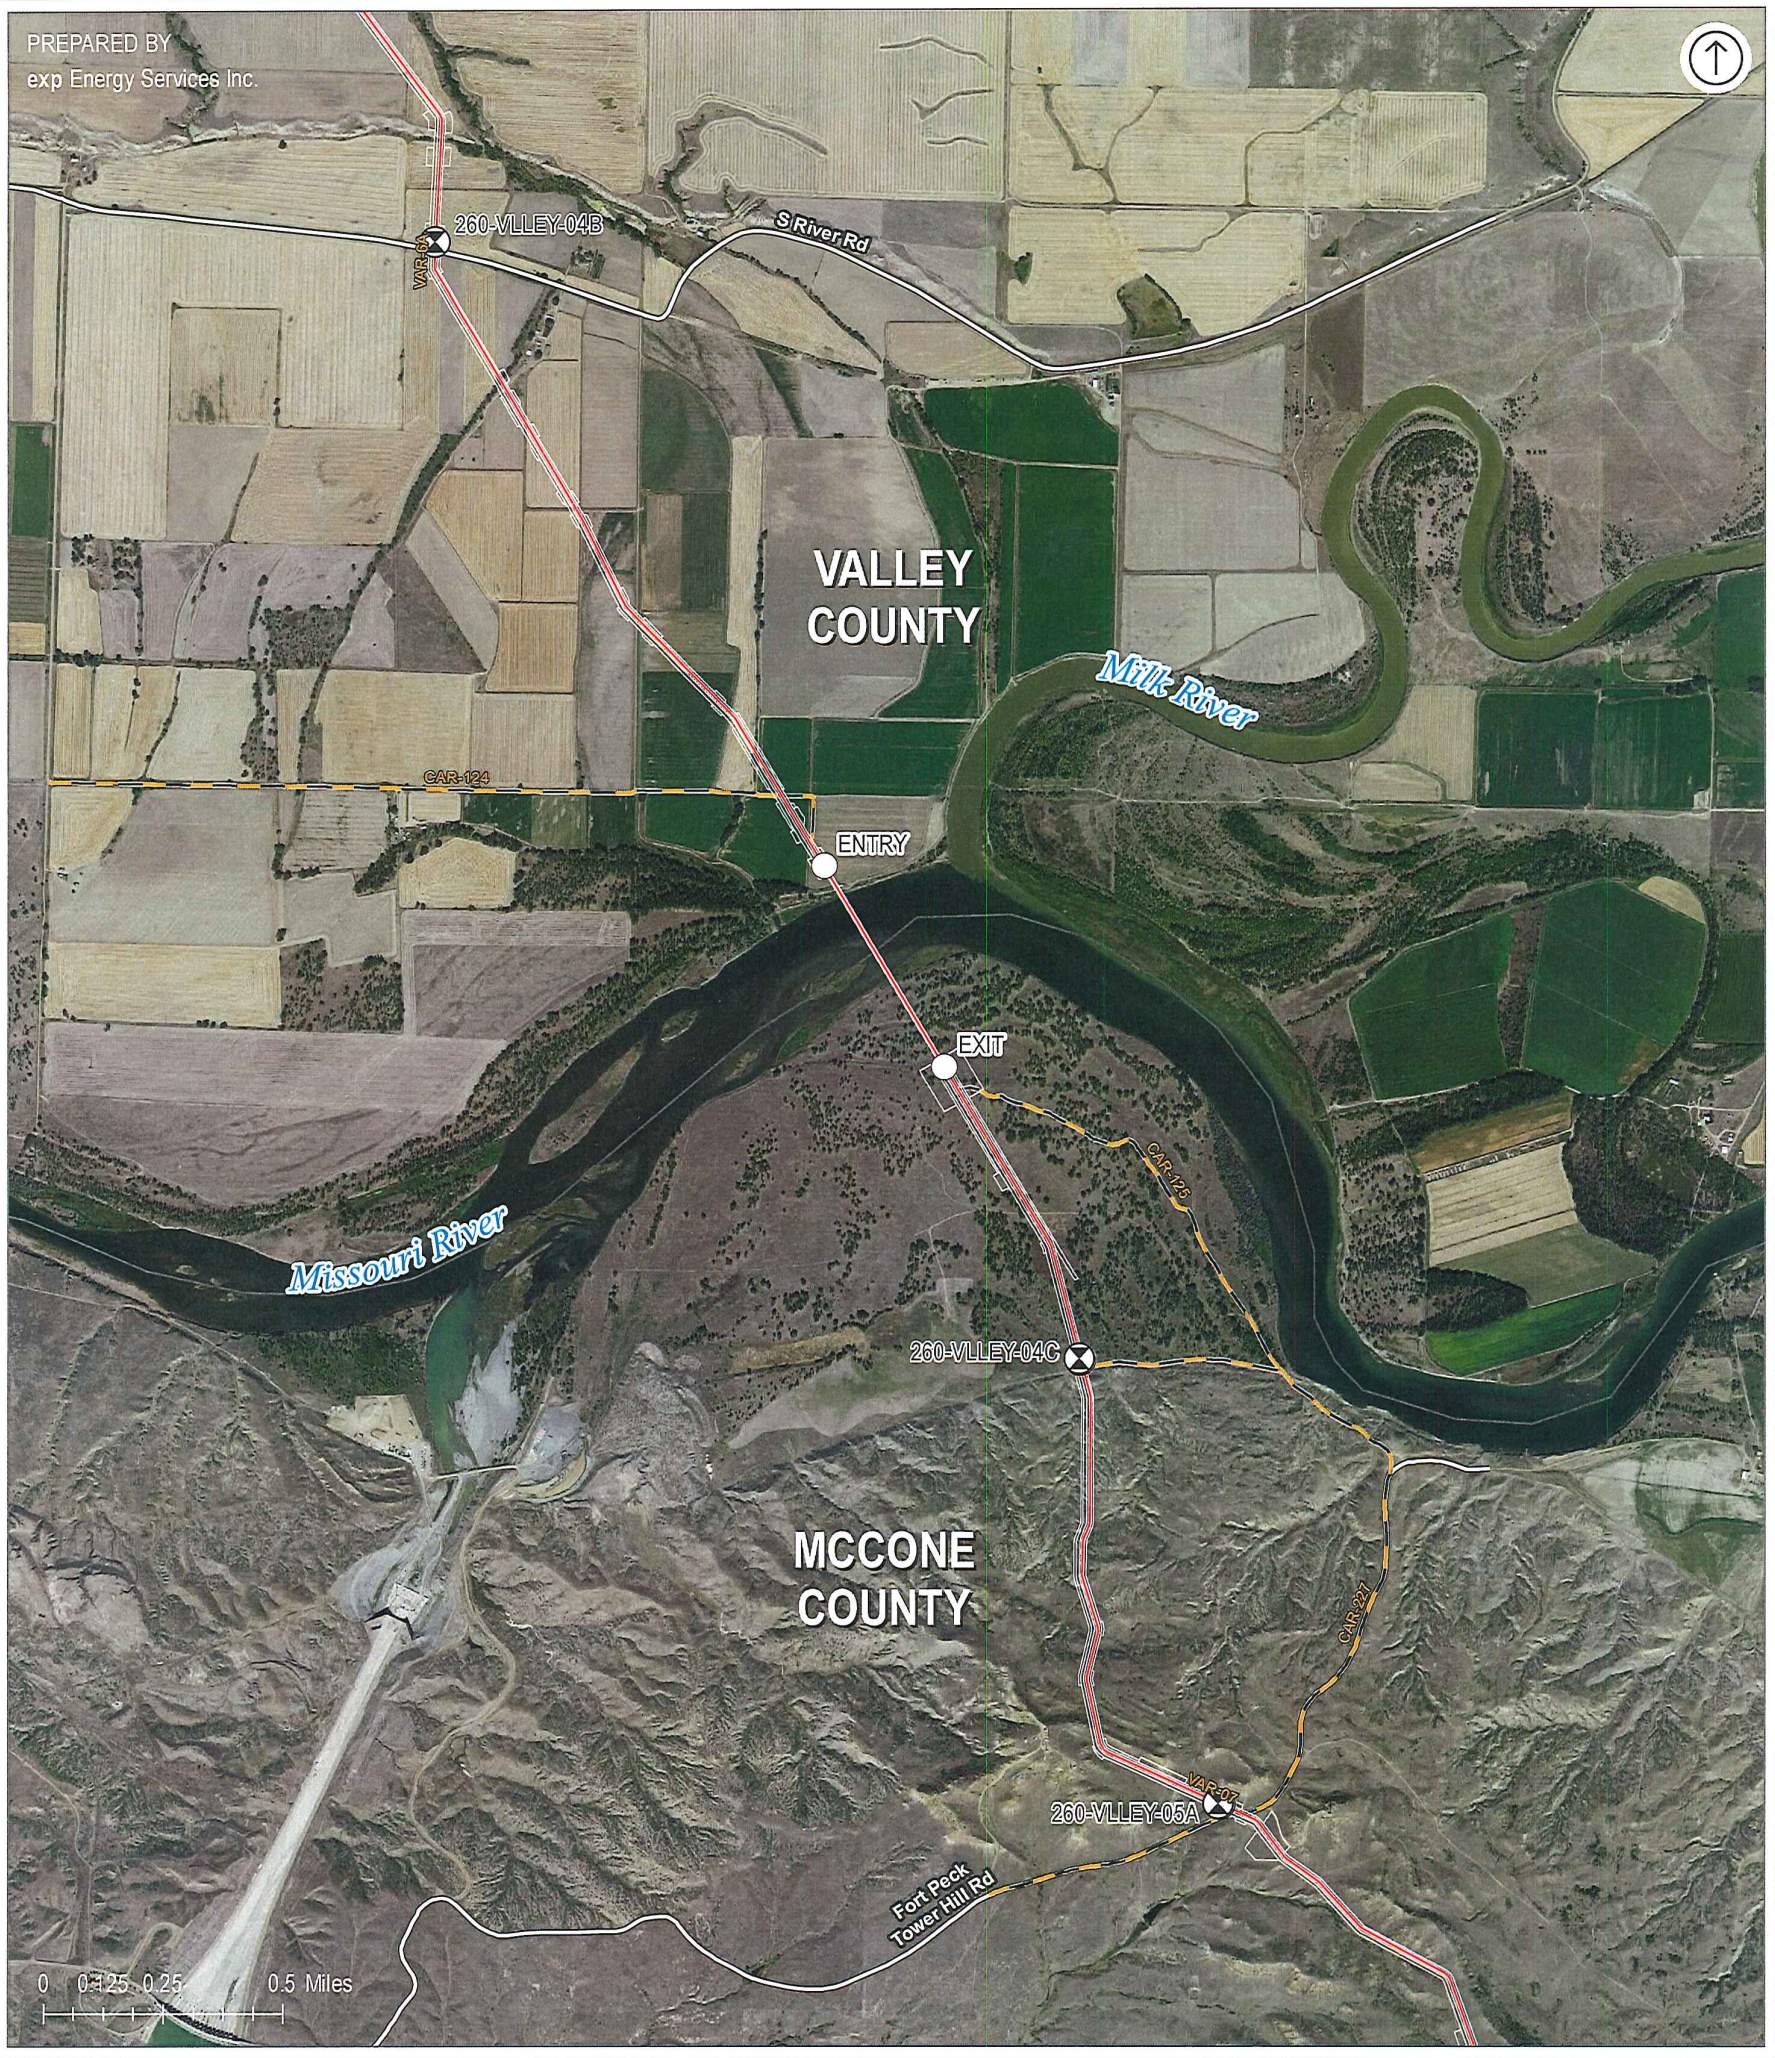

I also double checked as to whether or not the BOR has overlays with USACE and they do not. So we were correct in our assessment that the map you had was incorrect.

Hello,

My contact information is below. If there are any questions or issues or any information I can provide please contact me and I will assist any way that I can. Feel free to share my contact information with any or all of the others who were in attendance yesterday.

I have attached our hunting map that shows the specific area to the east of the Fort Peck spillway that we have closed to all public access.

Michele,

Likewise, a pleasure catching up as well.

Thanks for the map and verifying the overlay concern. Two very helpful tools in planning.

Take care

Larry, with Real Estate and ERGO compliance next week no one from Fort Peck will be available to attend. I agree the lack of Keystone being mentioned was intentional.

Darin

Sir,

FYI, I received this email from Larry asking if I think someone from my office should attend this. It is a MT fusion center meeting that will have DOJ, DHS, FPS and other LE type present. John actually went to a NE NG Joint center meeting a few weeks ago reference this same topic, but he went in uniform as part of his new MSG position with the Nebraska National Guard G-2 office.

My opinion would be that if we expect any protest on Corps property in MT that this may be beneficial for someone to attend. It would probably cost about 1.2k for TDY

This also fits with what we were talking about with DHS Greg Hollingstead, that my office should be integrated into all of these state fusion centers and part of their regular meetings.

Thoughts?

Subject: Keystone XL
Date: Monday, July 17, 2017 1:25:00 PM

Roger,

Previously we had talked about you or someone from your office attending an agency meeting in Montana to discuss security options for the Keystone XL project. Never heard back on whether you were approved to attend, but heard through the grapevine that someone from Omaha attended. Is that true? If so, could you provide a debrief of what was discussed and any follow-up actions? HQ appears to be interested in security discussions and is looking for an update.

Thanks,

Larry

Subject: RE: Keystone XL
Date: Monday, July 17, 2017 2:24:23 PM

Hi Larry,

I did attend and back briefed MAJ Startzell on some of the topics and discussion points.

The main point for this meeting was a briefing from the ND Morton County sheriff Kyle Kirchmeier and Mandan police chief, Chief Ziegler on lessons learned. (The Morton County Sheriff really dislikes the Corps of Engineers and federal LE responses, that was a big talking point he shared with this MT LE group.

The biggest take away I got was to meet several POCs and exchange contact information with the Montana state and federal government representatives that were present.

Including the MT disaster and emergency services field director.

State of MT Dept. of Justice, criminal justice agent

McCone County Sheriff (Ft. Peck Sheriff, who most likely will be the responding office if we have any protests on USACE property)

US Dept. of Interior, Bureau of Land Management Office of Law Enforcement, Special Agent in Charge. This federal office has 10 armed LE officers in MT and as the agency land owner of most of the locations the pipeline will cross. This agent was asked to brief what their plan was in case of protests. The answer was to work with local LE to deny access to federal property and that they take their direction from the US Attorney's office.

I also met with the FBI field analyst assigned to this area and plan to follow up with her for Ft. Peck critical assets site specifics.

Follow up actions, the state of MT is watching very closely on what the state of Nebraska decides to do with approval or denial of the pipeline. As for now that is about all that was discussed or planned for any future actions. Their next follow up action is to plan another meeting sometime this Fall.

Who at HQ is asking about security updates?

Roger

Roger,

Appreciate the feedback and would ask that you keep us up-to-date on any future developments/meetings. Were there any handouts? Would like to get a run down on the lessons learned that the ND officers shared.

The request came from MG Jackson, through Steve Kopecky at the NWD RIT. The Corps has a monthly meeting with the BLM and Department of State and the security discussion came up during that meeting. MG Jackson represents the Corps and Steve provides support. After the meeting Steve asked me if we knew about the meeting that was held in Montana on security. I shared that we were informed, looked into sending someone, but I did not know if they were able to attend. I told him that I would follow-up and let him know.

I'll plan on sharing this and any additional information you provide in my next update.

Thanks,

Larry

Larry,

No there were no handouts and it appeared his briefing slides were not being shared. His briefing talking points law enforcement specific tactics that would not apply to us.

The biggest tactic he described that they failed at was to initially deny access to the property by protestors and keep them as far away for the contested locations as possible by any means.

Roger,

Appreciate the feedback and would ask that you keep us up-to-date on any future developments/meetings. Were there any handouts? Would like to get a run down on the lessons learned that the ND officers shared.

The request came from MG Jackson, through Steve Kopecky at the NWD RIT. The Corps has a monthly meeting with the BLM and Department of State and the security discussion came up during that meeting. MG Jackson represents the Corps and Steve provides support. After the meeting Steve asked me if we knew about the meeting that was held in Montana on security. I shared that we were informed, looked into sending someone, but I did not know if they were able to attend. I told him that I would follow-up and let him know.

I'll plan on sharing this and any additional information you provide in my next update.

Thanks,

Larry

Hi Larry,

I did attend and back briefed MAJ Startzell on some of the topics and discussion points.

The main point for this meeting was a briefing from the ND Morton County sheriff Kyle Kirchmeier and Mandan police chief, Chief Ziegler on lessons learned. (The Morton County Sheriff really dislikes the Corps of Engineers and federal LE responses, that was a big talking point he shared with this MT LE group.

The biggest take away I got was to meet several POCs and exchange contact information with the Montana state and federal government representatives that were present.

Including the MT disaster and emergency services field director.

State of MT Dept. of Justice, criminal justice agent

McCone County Sheriff (Ft. Peck Sheriff, who most likely will be the responding office if we have any protests on USACE property)

US Dept. of Interior, Bureau of Land Management Office of Law Enforcement, Special Agent in Charge. This federal office has 10 armed LE officers in MT and as the agency land owner of most of the locations the pipeline will cross. This agent was asked to brief what their plan was in case of protests. The answer was to work with local LE to deny access to federal property and that they take their direction from the US Attorney's office.

I also met with the FBI field analyst assigned to this area and plan to follow up with her for Ft. Peck critical assets site specifics.

Follow up actions, the state of MT is watching very closely on what the state of Nebraska decides to do with approval or denial of the pipeline. As for now that is about all that was discussed or planned for any future actions. Their next follow up action is to plan another meeting sometime this Fall.

Who at HQ is asking about security updates?

Roger

Roger,

Previously we had talked about you or someone from your office attending an agency meeting in Montana to discuss security options for the Keystone XL project. Never heard back on whether you were approved to attend, but heard through the grapevine that someone from Omaha attended. Is that true? If so, could you provide a debrief of what was discussed and any follow-up actions? HQ appears to be interested in security discussions and is looking for an update.

Thanks,

Hi Larry, Darin

I wanted to follow up with you and Operations on the upcoming 2nd meeting with the MT disaster and Emergency Services. Reference the Keystone XL on 29 Nov 17, Miles City MT. They also expect to receive a presentation form Trans-Canada.

I see in the news this morning that NE has approved the pipeline but with a different route through NE. does this affect the route through Corps property in MT?

Will anyone from Operations and or Ft. Peck be attending this planning meeting?

Montana Tribes Fight Keystone XL Pipeline, Revived by Trump

Tribal members are trying to negotiate with TransCanada to reroute the pipeline downstream of their water supply

Fort Peck protesters gathered to demand the rerouting of the Keystone XL pipeline. Tressa Welch

By Hunter Pauli

1 day ago

Members of the Sioux and Assiniboine tribes of the Fort Peck Indian Reservation in Northeast Montana are trying to negotiate with energy company TransCanada to reroute the Keystone XL pipeline downstream of their drinking water source after past oil drilling destroyed their reservation's aquifer.

RELATED

Trump Reverses Obama Orders on Keystone XL, Dakota Access Pipelines

President also cuts regulatory, environmental review processes for infrastructure projects

The Fort Peck reservation is bordered on the south by the Missouri River, with its tribal seat of Poplar and larger city of Wolf Point sitting just off the banks. A quarter-mile west of the reservation's southwest corner, where the Milk River meets the Missouri, is where TransCanada has acquired state and federal permits for Alberta tar sands oil to ford the river through the Keystone XL pipeline.

Tribal members say the pipeline's proposed route is endangered by an old dam spillway and threatens their only source of fresh water from an intake plant 40 miles downstream to the east in Wolf Point, which state and local agencies didn't take into account when issuing permits.

The water intake plant and the network it feeds only came online recently, and supplies drinking and irrigation water to 30,000 people on the two-million-acre reservation and in surrounding communities. The need for what's known as the Fort Peck Dry Prairie Regional Water System stems from oil companies dumping millions of gallons of wastewater on the reservation for decades, poisoning the groundwater.

Margaret Abbott moved to the Fort Peck reservation in the Sixties and dug a well for a country home.

"We had fairly decent water up until about the Nineties," says Abbott, now 73.

That's when Abbott and her neighbors started noticing changes. Their gardens died. The tap water got salty. When Abbott went to retrieve her pasturing horses, she noticed standing water in subzero temperatures.

Abbott and her neighbors lived next to the East Poplar Oil Field, a petroleum patch adjacent the Bakken shale fields first drilled by the Murphy Oil Corporation in the Fifties and tapped again in the Eighties. Pumping oil out of the ground pumps up even more water, and the oil below Fort Peck is saltier than the ocean.

In a 28-page article published in 2013, journalist Kelly Conde details how Murphy dumped 42 million gallons of wastewater brine into unlined pits between 1952 and 1955, and the further polluting that followed.

Other wastewater was injected into underground wells, as is required today – which, combined with abandoned waste wells, progressively leaked into the groundwater as a benzene-rich saline plume, ruining the surrounding aquifer.

Benzene is a carcinogen, and Abbott has beaten breast cancer twice. Plenty of her neighbors are survivors as well, but their lawyers said pinning a cancer cluster on the oil company's water pollution was too difficult.

The tribe went to Congress, which in 2000 passed the **Fort Peck Rural Water System Act** to ensure safe water for Fort Peck and the surrounding counties through an eventual **\$300 million water pipeline** from the Missouri River.

Some tribal members drank bottled water for decades. Abbott and a dozen other families sued the oil companies in federal court, reaching a settlement in 2002 for a water pipeline to connect affected homes to Poplar's water supply. Abbott says the pipeline broke all the time.

In 2004, construction was completed on the water-intake facility on the **Missouri**, and by 2009 the plume had reached Poplar. In 2012, Poplar received its first water from the system, and most of the Fort Peck Dry Prairie Rural Water Supply System was up and running across the reservation and neighboring counties by 2015.

"It's been great; we haven't had a break. It's just amazing. So we were breathing a sigh of relief about that, and then Keystone got approved," Abbott says.

Abbott isn't confident Keystone can be stopped at this point, with the new Trump administration gung-ho about it and the petrodollars behind it.

"Oh, what the hell, just do it to the Indians: I'm afraid that's just a lot of people's attitudes," Abbott says.

One of the people trying to stop, reroute or delay the pipeline is Fort Peck tribal civil rights attorney and Rural Water Supply System board member Bob McAnally.

McAnally calls the pipeline a "false need" and says promises of jobs, tax revenue, environmental safety and even President Trump's **campaign pledge to build Keystone XL from American steel** are malarkey.

"It's been a trail of lies, not only from the administration to us the tribes, but from the pipeline itself," he says.

None of this surprises McAnally, and while he believes fighting Keystone XL may ultimately be futile, his people nonetheless have a spiritual obligation to protect the Missouri, something he wants Montana politicians to understand and value in negotiations.

"Being the first tribe in the United States that they encounter, we feel that it is our duty, in fact our mandate, to put up a legal resistance," McAnally says.

TransCanada pulled out of a March 16th meeting with the tribal executive board after protesters picketed the tribe's headquarters, but company representatives later spoke with the tribal leaders, members of the water board and their attorneys over the phone. McAnally said they presented their case to the TransCanada representatives, but soon realized the pipeline company had only sent a PR staffer and his assistant.

Tressa Welch

Another meeting has been tentatively planned with TransCanada, though McAnally says the details haven't been worked out yet. The tribes plan on presenting the company with three possible alternate routes for Keystone XL that variously go through or around the reservation but all cross the Missouri downstream of the water-intake plant.

When asked about the status of the Fort Peck tribes' proposed alternate pipeline routes, TransCanada spokesman Matthew John did not answer, stating that TransCanada is "committed to ongoing engagement with Tribal Nations" as the project moves forward, and that the Montana Department of Environmental Quality

(MDEQ) signed off on its permits in 2012.

McAnally says TransCanada has told the tribes the oil project will be perfectly safe – something they've heard before – yet couldn't give them any information on what would happen regarding cleaning up leaks.

"And they're supposed to be the ones with the amazing pipeline," he says.

McAnally says tar sands spilling into the Missouri River would be catastrophic to Fort Peck's environment and economy, destroying decades of work on their agricultural irrigation system.

"We'd have to rebuild the entire plant," he says.

McAnally says the water board's position is that the final environmental impact statement TransCanada gave the U.S. Department of State in 2014 is "completely faulty."

Much like the environmental impact statement accepted by MDEQ in 2012, TransCanada's permit application doesn't address Fort Peck's water at all, primarily concerning itself with the effect on migratory bird habitats and fisheries.

"It's faulty because they barely mentioned our water plant. They failed to recognize the danger," McAnally says.

A coalition of the Northern Plains Resource Council, the Sierra Club and other environmental groups sued TransCanada in Great Falls federal court in March to block Keystone XL on the basis of an inadequate environmental impact study. McAnally says the Fort Peck tribes have been invited to join the lawsuit, but they have not yet decided if they will.

Speaking through a spokesperson, MDEQ Director Tom Livers says the threat to Fort Peck and northeast Montana's water system "were not identified as an issue during scoping, in public comments or in the Tribal consultation process."

Livers says the surface and groundwater analysis impact zone was only a mile out, far from the 40 miles between the pipeline's proposed route and the water-intake plant.

In 2011 and 2015, oil pipeline spills on tributaries of the Missouri in Eastern Montana downstream of Fort Peck led the tribal executive board to [pass a resolution opposing Keystone XL](#) for the damage it could do to their water system.

"Given DEQ's recent experience with pipeline spills and public water supplies, if we were starting this analysis today, we would likely specifically consider potential impacts to the system intake in the event of a pipeline spill, despite the intake's distance from the proposed crossing," Livers says.

"Similarly, given heightened awareness of pipelines and water systems, it's likely these issues would surface today in scoping, public comment and/or tribal consultation," he says.

Livers says MDEQ's experience with the 2011 spill did lead to the department's new requirement of directional drilling and additional shutoff valves at pipeline river crossings like the one planned adjacent Fort Peck.

On the other side of Keystone XL's proposed Missouri River crossing and aimed directly at the future pipeline sits the spillway for the six-trillion-gallon reservoir contained by the 77-year-old Fort Peck Dam.

The Fort Peck spillway in 1946 AP

Record flooding in 2011 damaged the dam and prompted a controlled release of 50,000 cubic feet of water per second from the floodway for over a month, which damaged the spillway gates and eroded areas downstream.

The U.S. Army Corps of Engineers projected \$225 million to repair and bolster the dam and the spillway but could only afford \$46 million.

While the tribal government seeks to prevent construction of Keystone XL on its current route through the courts, water protectors embittered by their loss at Standing Rock are organizing on the Fort Peck Reservation to oppose the pipeline in the streets.

The family home of one of Abbott's students sits on a natural well north of Wolf Point not yet polluted by the migrating saline plume and unconnected to the rural water network. Tressa Welch says that although her family could hook up to the water network, they won't, as the water's integrity has been compromised by Keystone XL.

"I'm against the pipeline because it threatens my way of life, and if you threaten my way of life, you threaten me," the 26-year-old says.

Welch was part of the demonstrations on the Standing Rock Indian Reservation against the Dakota Access Pipeline, which was rerouted to just

above the reservation after residents of the 92-percent white city of Bismarck felt their water was threatened when the pipe crossed the Missouri upstream of them.

Now Welch is one of the organizers of Fort Peck Oyate, the tribal group of a few dozen protesters whose peaceful action scared off TransCanada negotiators from the executive board meeting using [an old Dakota Access protest sign repurposed to read "KILL THE BLACK SNAKE STOP THE KXL PIPELINE."](#) (McAnally speculates TransCanada wasn't actually scared off, but simply wasn't prepared and took the protest as an excuse not to meet.)

The group – which only decided on their name on April 11th – organized a prayer walk across the 40 miles of U.S. Route 2 paralleling the Missouri to Keystone XL's proposed river crossing. Welch's two-year-old daughter was the youngest marcher.

Fort Peck Oyate's next march is planned for April 22nd, and will bisect the reservation from the Canadian border in the north to the Missouri's banks. Welch says anyone willing to peacefully participate should march.

As negotiations with TransCanada are ongoing and possible construction still a ways off, Welch says the group's goal for the time being is to raise awareness in the tribal community to the threat the pipeline poses.

"A lot of people are uninformed here," Welch says.

Though the executive board tells its constituents it opposes construction of the pipeline, its meetings with TransCanada have been closed, which Welch says makes the board's sincerity hard to believe.

Welch doesn't want the pipeline rerouted downstream of the intake plant – she wants construction terminated, as any river crossing threatens communities downstream.

"I'm against the Black Snake entirely," she says.

Subject: [Non-DoD Source] Information for IAP

Hello All,

I am starting (between fires) to compile the information to include in the IAP/OPSO that we are developing with Anne from the MATIC.

If you would please submit from every county the information requested. Also federal and state partners could you please include your information so I can get the division break outs for all jurisdictions completed.

I have attached a spread sheet that you can compile this information in and send back to me. There are two versions on for Counties and then one for state/Feds.

Please pick on person from within each shareholder to send this so I don't get multiple copies and something gets missed.

Respectfully,

Jeff Gates

Subject: Last Weeks Meeting With MT DES and Law Enforcement at Miles City Regarding Keystone Pipeline
Date: Wednesday, December 6, 2017 2:53:00 PM

Todd and Christina,

Nothing specific or new to the Keystone Project came out of the meeting last week at Miles City. However, I learned that CHS, which owns CENEX and their refineries in Billings and Laurel, has a pipeline for refined fuels currently running from Billings to Minot, ND and beyond that they are replacing.

This new pipeline is a refined fuels pipeline that will go north from Sidney, MT cross under the Missouri River near River Mile 1590, upstream of the MT/ND Border based on information they presented, and then turn east to Minot. They are planning to construct in Spring/Summer of 2018. They are working on permits but indicated they had not applied for Regulatory Permit yet.

I thought it was interesting that I had not heard about this pipeline, to include good or bad press.

Paul, Matt, and Tyler:

Below find email forwarded from Jeff Gates, MT State DES Coordinator, regarding Keystone Pipeline. I discussed with him and indications are that Keystone will be built based on the 500K barrel commitment they have. I have been discussing with local LE, County DES, and Jeff coordination efforts if protests occur like DAPL. These discussions have included means to close access to the area east of spillway where keystone will cross USACE.

I don't know if Tyler and Deb have been involved in any discussion on supporting response to protest activity specific to Keystone but Jeff asked me to share this information and his contact information (below) with Tyler as the local FWS LEO. I wanted to make sure all three of you were looped in and therefore you could discuss who may need want to participate in any future discussions, and at least be added to email lists information as it comes.

This will be a discussion point for our meeting 26 Feb., or call me if you would like to discuss sooner.

Darin

NewsRelease

TransCanada Confirms Commercial Support for Keystone XL

Strong commercial support advances project to construction preparation while

working collaboratively with landowners to acquire easements

Calgary, Alberta – January 18, 2018 – TransCanada Corporation (TSX, NYSE: TRP) (TransCanada) today announced it has successfully concluded the Keystone XL open season, securing approximately 500,000 barrels per day of firm, 20-year commitments, positioning the proposed project to proceed. Interest in the project remains strong and TransCanada will look to continue to secure additional long-term contracted volumes.

Today's announcement builds on the November 20, 2017 decision by the Nebraska Public Service Commission to approve the Keystone XL route through the state. The approved route was based on a comprehensive review of the evidence submitted by all parties in the hearing process as well as state agencies to ensure it has a minimal impact to the public and to Nebraska's natural resources.

"Over the past 12 months, the Keystone XL project has achieved several milestones that move us significantly closer to constructing this critical energy infrastructure for North America," said Russ Gierling, TransCanada's president and chief executive officer.

"We thank President Donald Trump and his administration for their continued support and appreciate the ongoing efforts of Nebraska Governor Pete Ricketts, the Nebraska legislative and congressional delegation, Omaha Federation of Labor, Nebraska State AFL-CIO, our customers and various stakeholders to advance this project.

Furthermore, we appreciate Alberta Premier Rachel Notley for her government's commitment to the project which was instrumental to achieving the commercial support needed to proceed," added Gierling.

TransCanada is continuing outreach in the communities where the pipeline will be constructed and is working collaboratively with landowners in an open and transparent way to obtain the necessary easements for the approved route. Construction preparation has commenced and will increase as the permitting process advances throughout 2018, with primary construction expected to begin in 2019.

The project is expected to generate tens of millions of dollars in local tax revenues, supporting first responders, schools and hospitals, as well as roads and other local infrastructure. Enhanced standards and utilization of the most advanced technology will help ensure Keystone XL will be built and operated to uphold our fundamental commitment to safety and the communities we serve.

With more than 65 years' experience, TransCanada is a leader in the responsible development <<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fwww.transcanada.com%2Fen%2Fcommitment%2F&data=02%7C01%7Cjstrandell%40mtg.gov%7C6da935c1d23e41e646ee08d55e80b069%7C07a94-98f0f04abb7d6318720d02%7C09%7C1%7C636518829175879854&data=0B3k1b83aPzZqj3k1ab7yU2WhYPTtuuvX0%3D&reserved=0>> and reliable operation of North American energy infrastructure including natural gas and liquids pipelines, power generation and gas storage facilities. TransCanada operates one of the largest natural gas transmission networks that extends more than 56,900 miles, tapping into virtually all major gas supply basins in North America. TransCanada is the continent's leading provider of gas storage and related services with 63.3 billion cubic feet of storage capacity. A large independent power producer, TransCanada currently owns or has interests in approximately 6,100 megawatts of power generation in Canada and the United States. TransCanada is also the developer and operator of one of North America's leading liquids pipeline systems that extends approximately 3,000 miles, connecting growing continental oil supplies to key markets and refineries. TransCanada's common shares trade on the Toronto and New York stock exchanges under the symbol TRP. Subject: RE: Keystone XL

Hi Larry,

I did attend and back briefed MAJ Startzell on some of the topics and discussion points.

The main point for this meeting was a briefing from the ND Morton County sheriff Kyle Kirchmeier and Mandan police chief, Chief Ziegler on lessons learned. (The Morton County Sheriff really dislikes the Corps of Engineers and federal LE responses, that was a big talking point he shared with this MT LE group.

The biggest take away I got was to meet several POCs and exchange contact information with the Montana state and federal government representatives that were present.

Including the MT disaster and emergency services field director.

State of MT Dept. of Justice, criminal justice agent

McCone County Sheriff (Ft. Peck Sheriff, who most likely will be the responding office if we have any protests on USACE property)

US Dept. of Interior, Bureau of Land Management Office of Law Enforcement, Special Agent in Charge. This federal office has 10 armed LE officers in MT and as the agency land owner of most of the locations the pipeline will cross. This agent was asked to brief what their plan was in case of protests. The answer was to work with local LE to deny access to federal property and that they take their direction from the US Attorney's office.

I also met with the FBI field analyst assigned to this area and plan to follow up with her for Ft. Peck critical assets site specifics.

Follow up actions, the state of MT is watching very closely on what the state of Nebraska decides to do with approval or denial of the pipeline. As for now that is about all that was discussed or planned for any future actions. Their next follow up action is to plan another meeting sometime this Fall.

Who at HQ is asking about security updates?

Roger

Roger,

Previously we had talked about you or someone from your office attending an agency meeting in Montana to discuss security options for the Keystone XL project. Never heard back on whether you were approved to attend, but heard through the grapevine that someone from Omaha attended. Is that true? If so, could you provide a debrief of what was discussed and any follow-up actions? HQ appears to be interested in security discussions and is looking for an update.

Thanks,

Larry

Hi Larry, Darin

I wanted to follow up with you and Operations on the upcoming 2nd meeting with the MT disaster and Emergency Services. Reference the Keystone XL on 29 Nov 17, Miles City MT. They also expect to receive a presentation from Trans-Canada.

I see in the news this morning that NE has approved the pipeline but with a different route through NE. does this affect the route through Corps property in MT?

Will anyone from Operations and or Ft. Peck be attending this planning meeting?
